No. Almost certainly what he experienced was EMP. EMP effects are *the*
most common antenna effect during a thunderstorm, far more likely than a
direct strike because they occur for *every* lightning discharge within
a several mile radius of the antenna. Those of us who routinely play with
large ungrounded antenna structures know this effect well. Up at the farm
I had a 1,000 foot rhombic. I attached one leg of it to a sparkplug once
and could reliably detect lightning by the EMP that would cause the plug
to fire every time a distant lightning stroke occurred (even for discharges
that offered only a faint glow on the horizon and no audible thunderclap).
EMP's effect with antennas is, of course, simply reception of an
electromagnetic pulse, something antennas are designed to do. And,
of course, a lightning discharge generates an electromagnetic pulse,
it is, after all, a natural spark transmitter.

This has nothing to do with "static", which is an entirely different
phenomena. For a static charge to build up, his antenna would have to
have been disconnected *first*, and *then* brought near a grounded point.
For static charge separation to occur, a very high impedance between
the charges is required (which can't happen with the antenna tied to
Earth via his coax switch and cable braid), as well as a charge separation
mechanism, most typically mechanical, ala a Windhurst machine. In nature,
the most likely charge separation mechanism is wind driven particulates,
often dust, but sometines snowflakes too. Such charges build up slowly,
at less than 20 uA/s, and most antennas don't have enough capacitance to
Earth to store much charge. Typically, you never build up enough to generate
a spark you can see in daylight when you discharge the antenna. But EMP
generated induction can deliver nice fat sparks, like those normally
seen with sparkplugs.

If you think lightning rods prevent strikes by discharging "static", then you are sadly mistaken. Even Ben Franklin, the inventor of the lightning rod, knew better than that. Lightning rods offer protection by making themselves the most attractive target for lightning in the area. They thus safely provide a controlled path for the discharge rather than letting it meander through other paths that might cause harm.

Lightning rods do this by generating early and strong streamers, which, when they meet a step leader coming down from the cloud, form a low impedance ionized channel for the lightning discharge currents. Since the lightning rod is designed to be the most prolific and strongest source of streamers in the local area, it makes itself the most likely target for the bolt.

Lightning rods don't offer 100% protection, the meeting of streamer and step leader is a chaotic process akin to a random walk, but they offer good protection because the odds that it will be one of their streamers that intersects a step leader are much greater than for other structures in the area. And, because streamers from multiple sources typically become tangled on their way up to the cloud, the eventual lightning current will follow Kirchhoff's Law and flow primarily in the lowest impedance path regardless of which particular streamer first encounters a step leader. That's why lightning bolts often appear to fork in the sky, the currents are travelling several tangled streamer paths, but typically terminate at only one point on the ground, the point with the lowest impedance.

Barring the presence of a lightning rod, a grounded antenna structure can serve the same purpose, generating streamers from antenna "points". And will thus be the most likely target structure in the area. The source of the currents for the streamers is the current mirror induced in the Earth by a passing thundercloud, so obviously, a low impedance connection to Earth is required for best streamer production (and for safely conducting the return stroke to Earth).

If you doubt this, here are some good reference works to consult.

Atmospheric Electricity by John A. Chalmers

The Thundercloud by C.B. Moore in Vol 1 (_The Physics of Lightning_) of the compendium _Lightning_ edited by R. H. Golde

The Lightning Discharge by Martin A. Uman

The Electrification of Thunderstorms by Earle R. Williams

And for treatment of EMP, specifically NEMP, see

The Role of Space Charge in Nuclear Lightning by Chatham Cooke and Kenneth Wright in _Journal of Geophysical Research_ vol 93 number D2 pp 1679-1688

For a practical hands-on engineering view, see

The "Grounds" for Lightning and EMP Protection by Roger Block

EMP effects on antennas are very real, and very common. Only a direct strike is potentially more destructive to equipment or more dangerous to personnel. "Static" is rarely ever dangerous to properly designed equipment, and almost never presents an electrical hazard to personnel. Static buildup is also typically only an issue on very dry days. At other times, the humidity of the air offers a sufficient leakage path to prevent large buildups of charge on antenna structures.

To Warren, I would suggest fitting EMP rated suppressors to your tower base, and routing your antenna cables via those suppressors to the shack. (I'd also suggest improving your tower ground field, using single point ground window technique at your shack entrance, etc. But you've likely seen me say that before. Properly done, these latter steps will protect you from direct strikes too, not just from EMP hazards.)

Federal Aviation Regulation (FAR) 91.21 prohibts the use of any portable electronic device on board an aircraft in flight with these exceptions.

1. Portable voice recorders
2. Hearing aids
3. Heart Pacemakers
4. Electric Shavers
5. Any other device that the operator (the airline) has determined will not cause interference with the aircraft's navigation or communications systems.

The original purpose of this rule (it used to be 91.19 and was esatblished in 1961) was to prohibit the use of portable FM *receivers* aboard aircraft using VHF navigation. The superhetrodyne technology mentioned above can be a threat to the VHF equipment. A poorly constructed or malfunctioning receiver can cause interference. Most navigation today is still primarily VHF, augmented by UHF and SHF systems like GPS.

I believe most airlines are pretty restrictive about the operation of radios (receivers and scanners). The FAA issued an advisory circular in 1993 on the matter. They recommend that airlines prohibit the use of all electronic devices during stages of flight involvoing sterile cockpit operations - that is any operation, including taxi, below 10,000 feet and away from the gate. The AC also advises airlines not to allow any intentional radiators, including but not limited to, cellular telephones, CB radios, or remote controlled devices while in flight.

Of course the use of ham radios on any airplane is subject to FCC rules part 97.11 as well as FAR 91.21. 97.11 mentions Instrument Flight Rules (IFR). It should be noted that all flights operating at over 18,000 feet are under IFR as well as most commuter flights that may be below 18,000 - this includes just about every jet airliner flight.

BTW, for those that do not know. The use of cellular telephones in any aircraft, including hot air balloons, while airborne is expressly prohibited by the FCC under part 22.911.

Bill Gunshannon (bill@triangle.cs.uofs.edu) wrote:
: I'll bet you also think having a house next door that has 4 foot high weeds
: and junked cars on the front lawn won't effect your chances of selling your
: house too. Like it or not, some people (non-hams) see towers and antennae
: exactly the same way. And as long as hams make up a totally non-significant
: percentage of the population, this will continue to be the case.

Well, first Bill, you are ignoring what the "scientific" studies
say, and second you are ignoring a fundamental piece of human
behavior. People don't look up, they look at eye level or
lower typically.

I have a quick existance proof of this. When I was first courting
my XYL, I took her over to my house the first time, and I'd warned
her about the HF antenna I had in the middle of the roof. The house
is your typical 1960's ranch style house in the burbs. The antenna
is about 20 feet above the roof mounted smack dab in the center of same.

Well, to make a long story short. We visited my house for the first
time, then after we'd pulled away, and were down the street aways
I asked what she thought of the antenna... "Oh darn, I forgot to look!"
She hadn't noticed it EVEN THOUGH SHE KNEW ABOUT IT and was expecting
to see some horrible monstrosity. It just didn't enter her field
of vision while we walked up to the house front door, or left.
: |>
: |> Several people have already posted the results from the studies
: |> which show this.

: My wife sells houses for a living. I have heard a lot of reasons why people
: decide not to buy a house. Most of them strike me as absurd,but we are talkin
: aesthetics here, and everyones taste is different. CC&Rs against towers and
: antennae would not exist unless someone was concerned enough about it to go to
: the trouble of drafting them.If they didn't think it would increase their ability
: to sell property, do you really think developers would bother?? Large numbers of
: people must agree with them, or it would become a simple matter of getting your
: neightbors to agree to remove them. It isn't, so what does that tell you??

It tells me that there are alot of control freaks out there! The problem is
that the supply and demand are all out of whack. Sure there are some
people that will only move into places like this...but then there
is the another set, that I would argue is the silent majority, that
are just like hams, and that don't know the CC&R's are even there!

The ignorance arguement can be used quite strongly here...just as
we don't know enough to ask about CC&R's when were looking, the

average home buyer probably doesn't either.

Your wife sells real estate, but has she ever done land development?

The typical developer just uses the same set of CC&R's over and over
again. In fact, one adhock survey found that there are just
four boiler-plate sets of CC&R's in the Greater LA area (like
San Diego to Santa Barbara) in use by all the different developers!

There isn't a whole lot of thinking here...the formula works (so
they think..) so they keep repeating it, and the general public
doesn't know what they are getting into typically, especially if
you are the second buyer of the property!

: |> The issue is not one of property values, but one of "We can control
: |> you, and if you do not think so, just try and put up an antenna
: |> here. We don't like them, and so we will not allow them."

: Nobody is controlling the ham. He can choose to live somewhere else. There
: is no guaranteed right to have a 200 foot tower in a residential neighborhood.

Where? Within the town I live in there are three sets of developments.

There is stuff that is vintage 1960's, there is stuff that is circa 1980,
and the majority is circa 1990+. So the vast majority of the property
I can buy has CC&Rs on it(1980+) and the majority of that set includes
CC&R's that prohibit antennas.

Further, you assume it's gonna be a 200 foot tower...no...55 feet will
do thank you, and that is actually limit placed by most of the
municipalities around here. But this isn't even relevant since the
CC&R's prohibit ANY antenna.

You say I have a choice as to where I get to live...yep...anything in
this town built around 1960 will be what I'm restricted too! I don't
accept that as a reasonable answer!

: |>
: |> I don't happen to like lots of things my neighbors do (like
: |> painting their houses in pastel colors, for example, or having
: |> tiny little manicured lawns instead of natural habitat).

: Then you should have looked for a place to live that had CC&Rs against those
: things. I have seen CC&R's that controlled the color you could paint your
: house. That too is an aesthetic that can adversely effect your abilty to
: sell your house at a later date. But fewer people care about it, so CC&Rs
: concerning house color are much less common.

Yeah..and CC&Rs as to what type of front door you have, and what style
roof you have, etc. Tell these dweebs to get a life and start worrying
about their own affairs, not mine!

: |> to INFLUENCE how they do these things.
: |>

: |> In most of the Western US, if you want a tower, you cannot live in:
: |> a city; a housing development; a neighborhood; a large town.
: |>
: |> You have little or no control over the use of the property you own;
: |> what you can do, how you do it, and when you can do it has been
: |> decided for you. If you don't like it, you CANNOT "buy some other
: |> house" because they don't exist.

: But you agreed to that restriction before you bought the house. End of story.

Uh..wait a minute here. What if he didn't know about the restrictions.

You are ignoring that full disclosure isn't required in all 50 states!

: No one came in and told you after the fact that they were going to start
: restricting your activities. You agreed to the restriction when you signed the
: contract for the house. The best and only practical suggestion to come out of
: any of this is the suggestion that you add a clause to the contract concerning
: making all CC&Rs known and that if antennae are prohibited, the contract becomes
: void. The only other thing to do is if you really want to live in a particular
: area and it prohibits antennae, you could go from house to house and see if your
: prospective neighbors are willing to agree to the removal of that particular CC&R,
: before you buy the house. Of course, I highly suspect you will find that there
: are a lot more people who find towers and antennae unsightly than what you think.

: And in the end, it comes down to what I said above. Ham's are a statistically
: insignificant number in the population. And this is after all, supposed to be
: a democracy, with majority rule.

Yep, and protection of a minorities rights. (Igoring the fact that
I don't have a right to put up a tower from a federal point of view.)
What about the right to live in a place that I can afford, and
raise my family. There are enough places that are seniors only, or
now children as an example. (In CA the above is illegal...I don't
know about other locales.) The point is that there are deceptive
selling practices going on in many places, and there is also a huge
busy-body factor that just isn't right!

: All the best.

: bill KB3YV

No. Must carry only applies to common carriers (and isn't universal even
then, depending on State PSC tariffs), and your repeater patch is not a
common carrier. Amateur stations can't be common carriers as per Part 97.

Not if they are intended to run electric trolling motors. Then they are indeed both deep cycle and marine, and a good deal at Sam's Club. They aren't huge traction batteries with enormous capacity like the Tojans you mention, but they're a lot cheaper and smaller, and suited to many amateur station needs. I use a 38 A/hr Yuasa gell cell intended for trolling motor operation that cost under $40 and is slightly smaller than the average starting battery. That's a fine battery for station backup.

I, too, have wondered about this. The cause of the damage to the foundation, I believe, would be the heat generated by the resistive losses in the rebar causing the moisture in the concrete to turn to steam, which would expand and crack the concrete. So what matters here, is how good a conductor is the steel rebar, and how good a connection is there between rebars and a good ground?

If it were my house, I'd use a different method of grounding. Besides, there's no rebar in my foundation.

Had serious problems from a lightning strike last week. Now that most
everything is working again, though I'd pass on some details. Those of you
in some parts of the U.S. might not find this sort of thing so unusual, but
if you think it Couldn't Happen Here, read on ...

Thunderstorms occur only a few times a year out here in the Hawaiian
Islands, and lightning tends to strike in relatively harmless places. Last
Wednesday at about 1500 a small but intense little storm was accompanied by
a relatively intense lightning strike on the the eastern end of the
University of Hawaii campus. Eyewitness reports of exactly where the
lightning struck are numerous and contradictory, observers up to five miles
away were mightily impressed by the huge bolt of lightning and very loud
thunder.

There was no apparent effect on the power lines, outside of the possible
"jiggling" of a few cycles. The affect on data communications lines was
more impressive.

Briefly, all of the on-campus computer facilities with data communications
lines extending beyond their immediate buildings (typically RS232
3-or-4-wire leased phone circuits or similar) suffered burned out
ports and burned out terminals, notably:

several VAX780s at the Center for Cultural Interchange between
East & West (an on-campus "think tank" type organization) lost
multiplexer (port) boards and distribution panels.

a VAX785 in the Information & Computing Sciences Dept. lost
multiplexer boards & distribution, and appears to have suffered
memory and/or cpu damage.

several VAX780s in the Management Systems Office (administrative
computing) lost multiplexer boards & distribution, and may have

more extensive damage.

the High Energy Physics group lost multiplexer boards & panels
and a tape drive on their VAX780.

a VAX750 in the Marine Sciences Building kept on operating,
oblivious to the fact that more than 8 of its ports had just burned
out.

an H800 at the Hawaii Institute of Geophysics lost virtually all of
its DMACP (port) daughter and mother boards.

All three of the larger port selectors on campus (1 large Gandalf
at the UH Computing Center, 1 smaller Gandalf at the East/West
Center, and 1 Micom 600/2 at the HIG) suffered a large number of
burned out line boards, along with some port boards.

None of the computers which crashed (all of the above, except the VAX750),
suffered disc crashes.

For the most part, most of the damage appears in obviously-burned-out RS232
driver circuitry, and continues back into logic on the various port
interface (multiplex) boards.

An as-yet-uncounted number of terminals (minimum estimate: several hundred)
were damaged. Typically, the RS232 driver chips (most often 1488) were
burned out. In about 30% of the terminals I've personally checked so far,
damage spreads further into the terminal logic board, and sometimes all the
way to the power supply.

Most of the affected terminals were on relatively long lines (more than
200' or so), however many terminals with much shorter lines -- even some
in the same room as their computer -- suffered damage. Usually, these were
attached to port/multiplexer cards along with one or more long-line
terminals.

Microcomputers (such as IBM PCs) chugged right along without noticing the
lightning strike -- unless they had an out-of-building asynch connection,
in which case they suffered damage like terminals.

In many cases (notably the IBM3081D, DEC20 and HP3000/64 at the UH
Computing Center), port selectors protected individual machines almost
completely.

I don't have an accurate monetary estimate of the damage, but
it will certainly run over $100,000.

Field engineering response from Digital was quite good, but handicapped by
the fact that DEC only carries one "kit" of spares in the islands for each
model of VAX. Assessing the damage took a day or so (UH has almost
entirely, basic service), some replacement boards arrived quickly, others
not until after the weekend. Response from other vendors was
similar; Harris pulled parts off its production line
in Florida and burned-in over the weekend for us. Micom responded

quickly to ERE requests, shipping within 24 hours via Federal
Express. I don't have details on Gandalf's response yet.

A wide variety of different maintenance agreements were in effect with the
various manufacturers. Many of the contracts turned out to have "acts of
god" exclusion clauses. Fortunately, all of the vendors involved took the
attitude that they'd fix now, and worry about who would pay later.

> your power lines? Are they above or below ground? Secondly, do your
> communications lines have any type lightning or surge protection?
> Were any of the affected lines shielded? Do you have surge protection
> on your power lines?

All of the comm lines are underground, in conduits (not steam tunnels,
which we don't have out here). In some cases these were leased "4-wire
control circuits" from the local phone company (Hawaiian Telephone Co.,
a GTE subsidiary); in other cases, self-installed. All power lines are
also underground (separate conduit, usually completely different trenches).
Note that power lines were not affected, nor were regular phone lines (not
a single modem was zapped, and no phone problems of any kind were
reported). None of the comm lines had lightning or surge protection. Some
(a few) were shielded -- though I'm not sure how well the shielding was
grounded. Some power lines have surge protection, some not; in any case
the path was NOT thru the power lines.

Interestingly, some of the affected lines were entirely within a single
building, typically of reinforced concrete (and for ordinary r.f. signals,
the rebar cage usually provides some shielding). My theory is that -- at
some point -- those comm lines were bundled with other lines passing from
building to building.

> We are in a lightning prone area, and I have been attempting to
> understand the intricacies of lightning protection recently. I
> confess that the more I hear the more confused I get. I have
> concentrated on power protection, but your problems seem to have resulted
> from a communications line hit.

That's what the evidence definitely indicates. Surprised us.

> I wouldn't have thought that such a
> hit would spread to so many machines, unless you had a tremendous
> earth current transient that affected buried lines in a wide area,
> or were unlucky enough to get a hit on some central distribution
> point.

There was no central distribution point -- several completely separate
computer "centers" were involved, none tied together in any way. I'd say
the ground current transient (or, perhaps several as a charge briefly
"bounded" back and forth from the clouds to the earth and back again until
settling) seems likely.

> Am I wrong in this evaluation? Is there some other way such
> a strike could get into a widespread communications network? How
> does one go about protecting such a network from lightning?

I'd like some of those answers myself. Anyone else with experience care to
comment?

Protecting one building or tower from lightning is fairly straightforward:

1. First order protection -

On the tallest object associated with your structure, mount an
extended umbrella-like fixture a few meters in diameter, with numerous
sharp points along the periphery and across the crown, spaced about 1
meter apart. (You can make the thing from re-bar and heavy duty
chicken wire unless you have high winds like we have around here.)

Use a large diameter conductor (1 to 2 cm.) to connect the umbrella points together at the center and thence down to a suitable ground stake located at a place where soil moisture is prevalent, but more importantly, try to make the conductor run in a straight line with *no* sharp corners; use a minimum radius of 1.5 meters on any bends in the ground wire. Keep this wire at least 2 meters from any power or communications conduit at all places along its route.

Theory:

The multitude of points will emit a trickle corona continuously, resulting in a space charge of ionized air within 20 meters of the umbrella. The space charge will terminate the cloud-to-ground electric field across a broad hemisphere and will reduce the local field gradient to a value below that needed to form "leaders". The umbrella will likely not ever be hit by lightning; however, the conductor gauge is set to minimize the damage inherent in such a strike. (A strike, if it occurs, will likely be a secondary, (resulting from the shift in electrostatic field just after a strike) to another object within a fraction of a km.) This approach, you should note, puts additional stress on your neighbors (they will see a slight rise in their hit statistics) as it only postpones the discharge until the cloud has moved past your installation. The ground conductor is spaced from other conduits so that the Electromagnetic Pulse (EMP) associated with the 10000 Ampere surge will not be able to develop equivalent currents in parallel conductors adjacent to the ground wire. Using a large diameter and avoiding bends reduces the per length inductance discontinuities. This discourages the abandonment of your ground conductor in favor of nearby metal objects such as power conduits (resulting in hazardous elevation of the system ground potential to thousands of volts above the mains).

2. Second order protection -

Protect your primary power entry by use of a surge protector having four main elements

a.) Line fuses for each hot main NO FUSE FOR THE WHITE NEUTRAL. No circuit breakers (too slow).

b.) Self extinguishing gas discharge tubes or arc chutes routed to a primary ground stake *separated* by 3 or more meters from the umbrella ground mentioned above, *not* using the same stake, even, and using the same linear routing algorithm mentioned above.

c.) Heavy gauge inductors, 1 microhenry or thereabouts for typical 30 to 50 Ampere per phase service levels, to choke the surge out of the consumer side of the system. NONE IN THE WHITE NEUTRAL.

d.) Post choke line clamping to WHITE NEUTRAL. This is where the witchcraft comes in. One candidate is the Metal Oxide Varistor (MOV). They have two disadvantages: They age, gradually reducing their

threshold over time until one day they evaporate in a ball of fire during a line surge. They have a rather remote threshold characteristic compared to, say, a Silicon TransZorb. They have several advantages: They are cheap. They come in packaging that is familiar to professional electricians. They are generally more robust than Selenium or Silicon protectors. They have a smaller geometry than a Selenium protector. Another candidate is a combination protector made up from a ground referenced 50 Ampere triac in series with either a lower rated voltage MOV or TransZorb element, with the triac gate wired back to (an artfully positioned) tap on the gas tube/arc chute ground. From here (this stuff belongs in a fire-rated NEMA box) the WHITE NEUTRAL and GREEN NEUTRAL are tied together at this one point only, and passed through a medium size conductor to the primary ground stake by a route that is separated by 1.5 meters from the gas tube/arc chute ground.

Theory:

If your power line gets hit, the gas tube fires and conducts the surge current to ground. The 20 kilovolts experienced by your service entry (for about 10 microseconds) will go through the chokes and will cause the MOV or complex protector shunt to break down and draw a steadily rising current (to many tens of Amperes), but immediately choked to a reduced voltage. The fuses will, after a while, be blown away. Until then, the MOVs will clamp the WHITE NEUTRAL to the mains (perhaps resulting in noticeable rise of the common-mode voltage). It is this common-mode elevation which destroys your out-of-building communications interfaces. With everything in the building coming to 2000 volts above your neighbors (including your local telephone operating company), any common-mode paths will be severely stressed. However, especially withing the building, they will be less stressed than they would have been if the mains were allowed to diverge from the WHITE NEUTRAL.

3. Third level protection

The most effective common-mode protection is an Ultra-Isolator Transformer. It is also rather expensive compared to differential line protectors and secondary Silicon TransZorb protectors. Although many Ultra-Isolator Transformers were utilized during the 1970's by sensitive computer installations, it was realized eventually that the most damage to main-frame equipment was done by differential surges (main to main on three-phase systems). The common-mode threat was seen as too little to justify the cost and complexity of installation of an ultra-isolator, which, by the way, can also be done ineffectively, resulting in no net improvement in the level of protection. The companies that make ultra-isolators issue complete and effective instructions concerning their installation. The difficulty is in getting industrial electricians to follow the directions. Thus for the benefit of the main-frame and peripheral power supplies, for cost effective purposes, a good differential surge

eliminator inside the enclosure of each system power supply is recommended. However, remember that the common mode is the most destructive to your distributed data communications peripherals; unfortunately, to protect them you must provide the entire computer room and distributed CRT terminal load with an ultra-isolator transformer, or see that each unit is designed to withstand momentary local and global differences of thousands of volts on the signal returns. Even then, on occasion, only one violator located in a critical location and tied to a non-isolated power system elsewhere in the building can blow the whole scheme.

Theory:

Not much theory here. The entire primary winding of the transformer may get lifted to 2000 volts, but the secondary remains referenced to the computer room ground stake. The box shields around the the windings are tied to the stake, and short out the electric field that might otherwise couple to the secondary. Saturation of the transformer core protects the differential mode. The differential protectors installed in each power supply dissipate the surges locally and since each takes a small part of the surge energy, no concentration of damage will likely occur.

4. Fourth order protection

You may get surge protectors for all communication lines leaving the building. Each will need a reliable path to a stout ground. (DEC usually specifies that the computer frame GREEN WIRE ground be done with a heavy gauge wire, and all surge protector grounds be separately returned to the distribution transformer secondary neutral grounding point.) You may add Silicon TransZorbs to power supply rails in data communications equipment.

Theory:

If one of your comm lines gets hit, or gets involved in an induced surge, the elevation in voltage not dissipated by the protector is conducted through the internal diode clamps included in most IC line drivers and receivers to a ground or supply rail, and thence to a TransZorb (a back-to-back zener with a heavy silver anode and thermally conductive silver leads). If enough protectors are in place, the common-mode surge is clubbed to death by the collective capability of all peripheral surge protectors operating together.

And that about does it. Needless to say, if you do a good job of protecting your site, and one of your neighbors gets hit, you may be damaged anyhow by currents resulting from the elevation of your neighbor's electrical ground. This is especially true in Hawaii (and even more so on their mountain tops) where the ground is made of lava rock. If you get hit by lightning, your entire site goes to 25000 volts with respect to the surrounding neighborhood. This bleeds down to appx 2000 volts over the next 100 microseconds or so.

If you have several buildings to worry about, such as may be the case for a university campus, putting an umbrella protector on every building will only cause the cloud to ground potential to develop to the point that when you finally do get a strike, it will be a *real killer*. It has been pointed out elsewhere that most lightning strikes are from the ground up to the cloud.

Thus, More Theory (speculation):

I suspect that the mechanism is something like this: Collisions of air molecules with each other and the things that make up the surface tend to knock electrons off the air molecules. There are other charge pair generation mechanisms as well, such as natural radioactive decay of Radon 222 and its decay products. (This specific mechanism is not my theory - see JGR Vol 90 No D4 Pgs 5909-5916 June 30, 1985, Edward A Martell, NCAR.) The electrons, because of their charge, are sticky. They cling to the surfaces of various semi-insulators (rocks and dry dirt) and near the surface of conductors until enough of them are implanted to provide a counter electrical field gradient to repel later arrivals. The positive air ions are separated by thermal energy, and molecular screening prevents the immediate recombination. The charge separation is effected by the rising of the warmed positively ionized air.

Once the charge is separated, mutual repulsion drives the electrons into the conductive ground layers. Later, as the air rises and water condenses, positively charged droplets accumulate in descending air columns at the front of the storm just ahead of the rising column. A field gradient is thus established with respect to the ground, where all the electrons are. As the ground is conductive, the electrons follow the cloud until, with the aid of conductive moisture and the turbulence of the rising and descending air column interface, leaders are established and a strike path is ionized and carried into the descending air. The electrons travel up the path in a flash (parts of which will have oscillations at radio frequency) and then distribute themselves (at a more leisurely pace, accompanied with local flashes and secondary flashes) in accordance with upper level gradients until there is nolonger sufficient gradient to ionize the cloud-to-cloud paths.

Time scales:

Main strike and individual secondary strikes each about 10 microseconds.

Duration of ionized path, reversals and secondaries about 100 microseconds.

Duration of high altitude electrical coronae readjustment about 1 millisecond.

Localized differences in the final potential may result in some reverse strikes from a few overcharged negative clouds to the ground, or subsequently more numerously (after air motion), cloud to cloud

"readjustments".

Well, I've done it again. Darn. If this is too long, I suppose you
should flame me for it, or if I am guilty of mis-representing known
(un)truths, that would qualify as well. But I wanted to at least try
to clear up the nature of lightning and its hazards a little.

At last count, over 40% of the zapped terminals we had were repairable only by
replacing the 1488 and/or 1489 chips (usually the 1488). An
industrial-quality solder remover (heater + vacuum pump) is highly
recommended. The percentage seems to be slightly higher (better) for port
selector boards (Gandalf & Micom). Needless to say, we've been installing
sockets for those chips where practical.

On the computer side, all the port/multiplexer (DZ or whatever) boards
were just swapped out. Not sure what percentage just had driver chips
burned out or not. Subsidiary damage (one tape unit and some memory
boards) was limited to just 2 systems, and my opinion is that not all
the equipment at those locations was solidly tied to a single ground.

Besides the followup articles in this newsgroup, I've received a
considerable number of mail messages (all appreciated, though
I've not had time to send individual replies), falling into
two categories:

1) similar horror stories
2) thoughtful advice on lightning protection

Apparently, similar incidents (lightning damage via local data comm lines)
are much more common & widespread than I'd have thought. Unless you're in
a very unusual location, if you've got comm lines going between buildings,
be warned: something similar might just happen to you.

While I've received a number of very sensible suggestions on lightning
protection, there doesn't seem to be one single solution we could adopt
in all cases. Suggestions have ranged from using opto-isolators,
diodes (of various sorts, including MOVs), to using telco-type
spark gap devices, to fiber optics. Each approach has some good points.

However, the thought of having to install any particular suggestion
on the 800 or so data comm lines around campus which probably should have
protection is a sobering thought. Schemes cheap in material (e.g. diodes)
look to be rather labor-intensive (if both terminal and computer/port
selector ends both need protection -- which seems optimal). Schemes
cheap in time (e.g. fiber optics) look a bit expensive in parts
(though the thought of pulling a lot of fiber optic cables to replace
twisted-pair lines is also rather sobering).

So far, I think our best approach here is to stick to the basics.

For starters, going over all of the central grounds. All Computer
equipment and auxiliary racks within a room should be securely grounded
to a single point with generous-size braided ground straps.
The objective is to minimize any possible ground differences between
computers and their peripherals (including port selectors).
It seems to be a good idea to tie down all incoming terminal
grounds (RS232 pin 7) to that same point -- as the lines come in
(typically on punch blocks). This should localize damage (typically to the
port selectors). It also seems reasonable to dedicate whole computer-side
port/multiplexer boards to PACX lines ... no more mixing direct-connect
and port selector terminals. Typically, the only terminals I want
to leave directly connected will be those in the same building
(preferrably the same wing) as the computer site. This should also
minimize computer-side damage.

Fortunately, port selector boards are MUCH cheaper to repair/replace
than computer port/multiplexer boards.

Relatively expensive terminals (graphics types, for the most part) should
get some special form of isolation at their end from the RS232 lines
(preferrably something simple that plugs in between the RS232 line
and the terminal).

Cheaper terminals (< $1,000) I think are best left as-is for now.

All NEW inter-building trunks (multiple data comm lines) that I have
any control over will be fiber optic lines (stat muxes at each end,
of course).

We do have some plans for a couple of real LANs around campus. I
do believe that specs for those will now definitely include some
form of lightning protection.

Keywords: lightning power datacomm
Summary: postscript notes on the 1985 lightning strike

Some postscript notes on the 1985 lightning strike here at the U. of Hawaii.

No one ever figured out the total extent of damage, but it certainly was
in excess of $100,000 across the campus. The Hawaii Institute of Geophysics
alone---where I'm responsible for various machines---documented $43,000
in damages for the claim on our multi-risk insurance policy (which,
very fortunately specifically included fire & lightning...your typical
insurance policy often specifically doesn't cover those). That doesn't
include any of our DEC equipment which was replaced by DEC with no
questions asked (they were kind to us, if they went by the fine print
on their maintenance contracts, legally speaking they could have stuck
us with some hefty bills). My guess is that HIG sustained about
20-25% of the damage on campus (the lightning striking just about on
top of us); if so, then the total campus damage ran around $200,000.

Again for HIG alone, over 40 terminals were damaged. Almost half
of those we were able to repair by replacing 1488/1489 chips and such.
The remaining terminals were much more thoroughly fried and weren't
economically replaceable. I don't know what the campus total of
damaged terminals was, but it was almost certainly over 100.

There were some indications that one or two computer sites may indeed
have suffered some sort of power surge, but the main damage was to
data communications equipment and devices attached to that equipment.
With several thousand datacom lines running around campus there were
lots of "antennas" that picked up induced currents.

We thought up all sorts of schemes to protect ourselves afterwards,
but really didn't implement any protection measures systematically.
The Meteorology department did a risk study which showed that the
probability of a similarly damaging lightning strike on campus
within the next 20 years was very, very small. I hope they're right.

More (probably most now) campus terminals go through various port selectors
now, which means the port selectors protect most of the larger computer
systems from this sort of thing (our experience showed that replacing
parts of the port selectors was substantially cheaper than replacing
computer boards). On the other hand, we're much more thoroughly
ethernetted on campus now and I don't have any experience with
lightning zapping ethernets. One hopes that the transceivers
are the weak links.

Also on the other hand, we have many, many more PCs and fewer computer terminals. The PCs are more expensive to fix.

If we were in Florida or the midwest where lightning strikes such as this were more common, we'd certainly take more systematic protection.

1985 was not a fun year. Several months afterwards we were hit by a hurricane that knocked out the power grid on Oahu (and Kauai), leaving Honolulu (the 11th most populous U.S. city) without power for several days. [during that time, hardly anybody was concerned about their computers, being preoccupied by more immediate problems like how to deal with the immediate shortages of water, gasoline and refrigerated food---all very dependent upon electrical power].

Outlying areas were without power for several weeks while the rest of us had to deal with rolling blackouts before power generating capacity and major electrical trunk capacity was restored. We'd start up our computer systems when we had power, and bring them down when the radio announcement came that the power company was about to "roll" the power over to another locality.

Utility electric power was generally "flaky" for perhaps a year afterwards, with brief outages or major phase imbalances occuring more than once a week. HIG invested in an UPS (uninterruptible power supply) for our main computer systems. Other University sites weren't so fortunate and for various reasons wouldn't or couldn't obtain UPS's.

During that time an extraordinary number of power supplies and various other computer components rolled over and died. It was, of course, virtually impossible to tie any specific failure to the power problems we know we had during that time, but my personal guess is that HIG alone probably saved the $40,000 or so we spent for our 50kva UPS during the following year in equipment that didn't fail because of power problems.

All of that is is the past now, and we generally don't worry too much about these sorts of problems. Although...once every few months when we get an occasion power problem (particularly if it's a surge of some kind) I can count on 1-3% of our various models of PCs rolling over and dying (though it's usually just the power supplies).

:>Have a nice day.
:>-Jeffy VE1BLL

It is my understanding that a foundation can explode if the tower it
is sunken into takes a direct hit. There is usually moisture in the
ground and likely in the foundation too.

What does lightning do? It doesn't just strike the ground and that's
the end of it. Any moisture could be affected too. If your tower is
hit couldn't the moisture in and around the foundation boil or
vaporize instantly? Wouldn't it stand to reason then that the
resulting gasious expansion could cause the foundation to
"shatter/crack/ or explode?" Isn't this an effect of the heat
generated? Wouldn't it be the same as putting an ice cube into a
glass of tepid water? Listen to it crackle...couldn't the temperature
differential create the same results? I haven't tried ice cubes with
rebar yet... <%-*

This doesn't mean all foundations will shatter/crack/explode all the
time but the chances are pretty good that they can.

Any Physics majors here.

:>Hi Zack,
:>
:>Their favorite mode is "arguing" -- I just wish they'd find
:>a new topic!

I thought every radio produced or homebrewed came with at least two
modes, AM/Arguing, AM/SSB/CW/Arguing, etc., etc. Isn't Arguing
actually the oldest and most common mode anyway?

And wasn't 14.313 MHz the international arguing frequency at one time
if not still? I thought even rock-bround rigs had that frequency...
but that is another thread.

Cheers!

ARLX039 Ham's war anniversary

ZCZC AX09
QST de W1AW
Special Bulletin 39 ARLX039
From ARRL Headquarters
Newington CT August 9, 1995
To all radio amateurs

SB SPCL ARL ARLX039
ARLX039 Ham's war anniversary

The young US Army Signal Corps sergeant who helped relay the ''end of the war'' message on August 14, 1945, is an Amateur Radio legacy and a current active ham.

Sgt Richard Zucker, today KB3YM of Ellicott City, Maryland, was a radio operator with the 3116th Signal Service Battalion at WTJ Radio Control on Oahu, Hawaii. At 2314Z, the 21-year-old radioman received a teletype message from the Pentagon station WAR near Washington and relayed it to General Douglas MacArthur in the Philippines. The message announced the Japanese capitulation, signifying the official end of World War II.

Zucker grew up in an Amateur Radio family in Mt Vernon, New York. His father, also named Richard, was on the air in 1913 with a kilowatt spark rig and a ''self-assigned'' call sign: 2DB. The elder Zucker was in the Signal Corps in World War I. Young Richard enlisted in the service in 1942 at age 18 and was assigned to the Signal Corps because he already knew the Morse code. He took his amateur license exam in 1944 while stationed in Honolulu and was assigned his first call, W2QKT, in 1946.

After the war, Sgt Zucker earned a bachelor's degree from New York University and a master's from Brooklyn Polytechnic Institute. Today, he is active both on the amateur bands and on the Military Affiliate Radio System, as AAR3EO. His wife is Doris Jean Hauck.

Hi Todd, do you consider the newspaper column "Word For Word" not an
authoritative etymological source or are you not aware of their
research?

>>DAYS for a technical question.

I agree with John, I have had very good service from Kenwood. However,
I have other friends who have been treated absolutely horribly, with
no excuses. I tend not to trust them unless I walk in and carefully
explain my problems to the service tech there, as many mistakes
appear to be made at times. I like to submit a very carefully written
statement of the problem, suggested solutions, and limitations on what
I want from them. It has worked fine for me.

>>Now, my question to all of you: Is Ten Tec or Icom (US stuff) any
>>better??? I also have found Yaesu to stink..

I do not know anything about Yaesu. Ten Tec is wonderful for tech
support and for service. Absolutely no complaints in my many dealings
with them, and no close friends of mine have complained. Occasionally
Ten Tec has gone out of its way to help me out.

[some good advice deleted]

after i passed my no-code tech test i was going crazy from the wait (for the license to arrive in the mail -- this was before electronic filing) and my wife suggested that i see how far i could advance before my licence actually did arrive. i made it to general in 6 weeks, my license (no code tech) arrived one day later. i'd say it took me about 3 weeks to get to 13 wpm (although only 5 days to get to 5 wpm) studying an hour or so a day. but one thing i did (and one thing the other poster mentioned) was translate everything i saw into code, stop signs, street signs, pizza menu's. i didn't use supermorse, i hated the calibration, i forget what i used but they're all fairly similar, as long as it lets you do random letters, numbers, and text files. random is better practice, but it's aggrivating (because it's harder) so i tended to listen to text files. but the other poster was right about you never being more motivated to go to 20.

: Yes, he's happy, just as you're happy that there are Morse Code beepers and
: Voice Box Squawkers with whom YOU can talk. What is the big deal? If Gary
: doesn't want to talk with the morons on 14.313, will you take offense at
: that?

It's interesting that this freq always pops up with regard to Morse.
As you very well know, if you so much as sneeze on HF you'll be heard
hundreds if not thousands of miles away. Now think of all the sneezing
occuring on V/UHF (147.435 MHz in L.A. comes to mind) which only the
locals hear. If 14.313 is the only HF freq in which routine sneezing
is occuring then we should count ourselves as blessed. Too bad the
V/UHF operators can't brag as such.

: Your argument is so specious and weak that you must resort to silly _ad
: hominem_ attacks on Gary to further your silly point.

Say Jerry, why don't you speak up when Gary insults a large percentage
of hams by saying things such as code causes brain damage, and other
nutty beliefs. You defending Gary places you in the same silliness
catagory that he resides in.

: and CALL CQ as much as you can. This reduces the tendency for deadly embrace
: where the band appears dead because of no activity.

: 73 Dave WB0GAZ dgf@netcom.com
In general I concur with Ed and Dave, but I don't think that just
because your beam has less than 8 elements and the TS700S is only about
10 watts should keep you off the air. Horizontal is certainly a necessity.
Remember that if you get your effective radiated power and receiving
gain with a big beam, the radiated beam will be narrow, and you
will have to listen and call in many directions to get in touch
when the band is poor (no tropospheric ducting, etc) When it is
good it will surprise you!

Dang, it difficult to keep a secret, but a U.S. manufacturer
of telegraphic sending devices is now tooling up to produce a
straight key for the first time in their 100-year history. It
promises to be the very very very best straight key ever built.
Sounds like a riddle? Email me for details.

2515. Re: Deep Cell Batteries

Newsgroup: rec.radio.amateur.misc
Date: 1995-08-09 00:00:00 UTC
From: Tu and Bob Myers <tuandbob@acy1.digex.net>
Message-ID: <Pine.SUN.3.91.950809213707.10926A-100000@acy1.digex.net>
Source record: 240831

Gel Cell (a trade name), also know as retained electrolyte batteries made for deep discharge are good if sized correctly and don't go below 30 or 40 percent depth of discharge. RE batteries are also more convenient and generate less hydrogen.

How ever, before deciding, determine your load and time of use. Then multiply by three or 4 to keep the depth of discharge at 30/40% maximum to get the best life out of the battery. Mel Weis at Yuasa will send you information on depth of discharge versus number of charge/discharge cycles.

Yuasa Battery Co Inc
POB 3748
Santa Fe Springs CA 90670
Contact: Ron Alonzo, Marketing
Mel Weis, Engineer
TollFree: 800-423-4667
Phone: 310-949-4266
FAX: 310-949-5527
Manufacturer, lead acid batteries, flooded and sealed
94OCT24

Perhaps, after analysis of your load, time, and conditions of use, the Yuasa may be just what you need.

In my case, with power failures lasting a couple of days in winter with a snow covered PV array, a fan to circulate the heat from the wood stove (for water pipes as well as people), a couple of fluorescent light (@ 30 watts each), an entertainment radio, a 2 meter ham rig working with the city and 4-wheel drive clubs for rescue, etc., my lap top computer for amateur packet, ... 38 Ampere hours doesn't last very long.

Bob

2516. Re: Which licence for HF in USA?

Newsgroup: rec.radio.amateur.misc
Date: 1995-08-09 00:00:00 UTC
From: drt@iii1.iii.net
Message-ID: <40arev$3ah@iii1.iii.net>
Source record: 240832

Stefan Wimmer (193.96.231.25) wrote:
: Hi folks,

: browsing this newsgroup from time to time I have an idea that there are
: several licences in the USA like tech, advanced etc.
: Can someone enlighten a foreigner what wich licence implies?
: I suppose they form a hierarchy like ours here in Germany (C-A-B not A-B-C
: [lowest->highest]!!)) do? Especially I'm interested which license is needed
: at least to work on the HF bands?

There are 6 license classes: Novice, Technician, Technician Plus
(limited HF), General, Advanced, and Extra. Technician and above have
full VHF/UHF privileges, approximate equivalent to the VHF/UHF CEPT
licence; General and above have decent access to the HF bands.
Advanced is approximately the equivalent of a CEPT Full license,
although only Extras have full privileges. The biggest difference is
that even Extras have limited phone privileges compared to non-US hams
(leading to "foreign phone" bands). If you're curious, all foreign
amateurs operating in the US under reciprocal privileges get the
privileges they get at home, but they cannot exceed the privileges of a US
Extra-class licensee.

It depends on the nature of your local 911 dispatch system - many agencies have computer-aided dispatch systems that are capable of flagging specific phone numbers/addresses with special information the dispatcher needs to know - this is usually call history, officer safety, and hazardous materials information, but any sort of relevant information can be put into the dispatch system.

2522. US Military Field Expedient Antennas

Newsgroup: rec.radio.amateur.misc
Date: 1995-08-09 00:00:00 UTC
From: pglibber@uk.oracle.com
Message-ID: <9508090927.AA22216@ukpyr2.uk.oracle.com>
Source record: 240867
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.homebrew,rec.radio.amateur.misc

I have some fairly basic questions that I would appreciate your help and guidance with.

I have been reading a US Army Special Forces manual which discusses various types of improvised, field-expedient antennas such as:

Ground Plane
Horizontal
Long-wire
Half-Rhombic
Doublet

I'm writing from the UK and the references mentioned in the manual are not at all easy to come by - I've tried.

1) In the case of some of these designs there is a need for a 'ground'. The diagrams in the manual show one end of a wire attached to a metal stake which is pushed into the ground, while the other end is attached to the radio set itself. Where on the radio set is the free end of the ground wire attached ? Is it attached to some kind of socket, or do you somehow attach it to the body of the radio set ?

2) When using a 1/2-Rhombic the manual mentions that you feed the two 1/4 wave antenna elements from the centre using a 'coax'. What exactly is a 'coax' and how does it differ from the antenna wire itself ?

3) With the 1/2-Rhombic design the manual suggests that if a coax is not available to use a 'twisted pair'. What is a twisted pair ? My guess is two sheathed copper wires twisted together - but is this too simple a thought ?

4) With the 1/2-Rhombic one end of the antenna wire is attached to a terminating resistor. The idea of this resistor is to give some directionality to the radio wave (I recognise that there is a difference between a resistor and an insulator (in the later case, the manual suggests a piece of wood or a C-ration spoon)). Does anyone have a good idea of what would make a good field expedient resistor ?

Thanks,

Peter

Might also try Panasonic as Matsushita is the parent corp.

I've had miserable luck with the in the marine equip. dept. I once spent over an hour and about 10 phone calls only to finally be referred back to where I started by Matsushita. I then called another company who sold the same radar under their name and was helped within 2 minutes. What a joke.

Hope you have better luck with the cell phone dept.

The HQ-129X receiver was introduced by Hammarlund in 1946.

Selling price - $177.30 plus speaker. Don't know how long it stayed in
production, but the next ham receiver in the "HQ" series was the
HQ-140X introduced in 1953.

Message-ID: <4091ge$1h3a@bigblue.oit.unc.edu>
Source record: 240873

My wife had her 1A exam a little while back ... the exam was graded on one minute of perfect copy only. No 10 question exam at all, either a minute of perfect copy or failure. It also had a LOT of abbreviations - OT, FB, UR, ES and a couple of others I can't remember ... I only got a minute to read it as they were making out her upgrade certificate after ...

The exam was a lot meaner than my 1A .. is that standard now?
She is very curious, as everyone had been telling her about the "10 question exam" all the way through she feels like they tried to zap her because she's female or something. Not that it stopped her ...

Boy, what a pain to go through all that grief. Just put the radio in your
brief case or other carry on and run it through the xray machine. If I am
carrying nothing else, I just stick it in the pocket of my laptop case run
it through the xray along with the computer. No delays, no demos,
(unless, of course you're like me and forget to take off your pager while
in line :)

The problem with this approach is that the public safety agencies do not control what is displayed on the PSAP display (E-911), the telephone company database is where that info resides. Our local repeater's phone line comes up at the sheriff's dept, displaying "Ham Radio Phone Patch" Which helps a lot. But this was arranged with the telco, not the sheriff's dept. (it didn't hurt to have a couple of telco employees in the club)

Hi Dan, You have an old channel master rotor, and all of the 3 wire rotors were basically the same. A new control box will run you old motor. I believe its something like 20 volts AC to run the thing if you want to make your own control.
We just used one of those beasts this last field day....but we had a 12V DC motor installed in it (we were QRP Battery) it worked quite well.

Brian, KC7LWZ (woody1@teleport.com) writes:

> What does "HAM" stand for?

This thread (and threads about other ham lingo) comes around about once every six months or so. On one of its last visits I decided to collect all of the responses I could with the intention of compiling a Hamspeak/English dictionary. Needless to say, this project wound up on the back burner, but I *did* edit a few entries.

Attached below is the entry for "ham", which includes the four principal theories that seem to recur whenever this topic comes up. These theories are listed in what *I* consider to be the most plausible order (I believe this is referred to as "editorial license"), and the first actually contains a real live reference to someone who might actually know what he's talking about. ;-)

KB6JXT, Todd

---

ham

An amateur radio operator, often referred to as a "ham radio operator." The precise origin of this term is without a doubt one of the biggest mysteries in amateur radio.

(i) During the late 19th century wire telegraphers with poor operating skills were known as "hams", and the trade schools at which they were trained were referred to as "ham factories" (cf. "The American Telegrapher - A Social History, 1880-1900" by Edwin Gabler.) "Ham" was probably derived from "ham-fisted", a pejorative term used to describe a heavy-handed brass-pounding style ("a fist like a ham.") "Ham radio" was later used by professional wire telegraphers to refer to amateur experimentation in wireless telegraphy. These experimenters apparently did not object to the derogatory intent of this term, and adopted its use themselves.

(ii) The early 20th century magazine "Home Amateur Mechanic", in which plans for a spark gap transmitter were first published, featured regular columns entitled "HAM Aviation", "HAM Invention", and, of course, "HAM Radio." One theory cites this magazine column as the origin of the term "ham radio", and argues that it was adopted by young inventors and experimenters like ARRL founder Hiram Maxim Percy. Another theory suggests that "ham" was actually derived from Percy's first name - a highly unlikely possibility at best.

(iii) The Harvard Radio Club's first wireless telegraphy station was identifed in 1908 as "Hyman-Almy-Murray", an amalgam of its three operators surnames. In the interest of brevity this was later shortened to "Hy-Al-Mu" and eventually "HAM". Although this is sometimes cited (primarily by Harvard graduates, one would presume) as the first use of the term "ham", it is more likely a fortuitous coincidence that the operators initials spelled the already popular term.

(iv) Some armchair etymologists have observed that "ham" could be a shortening of a dialectic (possibly Scottish, Irish, or Cockney) pronounciation of "amateur", and suggest that this is the origin of the term. No authoritative etymological source cites this theory.

Bar none, unless you're looking for a really fancy (marble base, blah, blah) type of key, the pump key made by KENT, LTD. is just fabulous. Beautiful looking, works great and has just the right substantial "feel" that separates it from anything else I've ever used. The current crop of "keys for the masses" pales in comparison.

An obviously unbiased opinion :-) Really guys, it beats something like a Bencher all to blazes.

In article <405q2b$rvc@hpbab.wv>, hanko@wv.mentorg.com (Hank Oredson) writes:
|>
|> And just how do towers and antennas affect adjoining property values?
|> The answer is "They do not."

I'll bet you also think having a house next door that has 4 foot high weeds and junked cars on the front lawn won't effect your chances of selling your house too. Like it or not, some people (non-hams) see towers and antennae exactly the same way. And as long as hams make up a totally non-significant percentage of the population, this will continue to be the case.

|>
|> Several people have already posted the results from the studies
|> which show this.

My wife sells houses for a living. I have heard a lot of reasons why people decide not to buy a house. Most of them strike me as absurd, but we are talking aesthetics here, and everyones taste is different. CC&Rs against towers and antennae would not exist unless someone was concerned enough about it to go to the trouble of drafting them. If they didn't think it would increase their ability to sell property, do you really think developers would bother?? Large numbers of people must agree with them, or it would become a simple matter of getting your neightbors to agree to remove them. It isn't, so what does that tell you??

|>
|> The issue is not one of property values, but one of "We can control
|> you, and if you do not think so, just try and put up an antenna
|> here. We don't like them, and so we will not allow them."

Nobody is controlling the ham. He can choose to live somewhere else. There is no guaranteed right to have a 200 foot tower in a residential neighborhood.

|>
|> I don't happen to like lots of things my neighbors do (like
|> painting their houses in pastel colors, for example, or having
|> tiny little manicured lawns instead of natural habitat).

Then you should have looked for a place to live that had CC&Rs against those things. I have seen CC&R's that controlled the color you could paint your house. That too is an aesthetic that can adversely effect your abilty to sell your house at a later date. But fewer people care about it, so CC&Rs concerning house color are much less common.

|>
|> But I do not attempt to CONTROL what they do, but rather attempt
|> to INFLUENCE how they do these things.

|>
|> In most of the Western US, if you want a tower, you cannot live in:
|> a city; a housing development; a neighborhood; a large town.
|>
|> You have little or no control over the use of the property you own;
|> what you can do, how you do it, and when you can do it has been
|> decided for you. If you don't like it, you CANNOT "buy some other
|> house" because they don't exist.

But you agreed to that restriction before you bought the house. End of story. No one came in and told you after the fact that they were going to start restricting your activities. You agreed to the restriction when you signed the contract for the house. The best and only practical suggestion to come out of any of this is the suggestion that you add a clause to the contract concerning making all CC&Rs known and that if antennae are prohibited, the contract becomes void. The only other thing to do is if you really want to live in a particular area and it prohibits antennae, you could go from house to house and see if your prospective neighbors are willing to agree to the removal of that particular CC&R, before you buy the house. Of course, I highly suspect you will find that there are a lot more people who find towers and antennae unsightly than what you think.

And in the end, it comes down to what I said above. Ham's are a statistically insignificant number in the population. And this is after all, supposed to be a democracy, with majority rule.

All the best.

>Yaesus are like the Energizer Bunny, they just keep working, and
>working, and working. Just a point to ponder.

Have had more problems with Icom HT's than any Ten Tec HF rig I ever owned.
I went through two Icom HT's, and about 5 Ten Tec HF rigs over the last
10 years. In my firsthand experience, my Ten Tec rigs have been more
reliable than any Kenwood I have had, and what I was talking about
was more along the lines of Tech support. Ten Tec service techs will
talk to me on the phone for free, suggesting mods and helping me tweak
the rigs anytime I get the itch. The one or two times I have needed service,
they have sent me boards on account, nothing I have seen any other company
do.

To summarize: I have had many Ten Tec radios, and have other friends who
are Ten Tec "fans", and we have, in general, very reliable radios
compared to other radios. This is limited to HF gear, of course, and
over the last 10 years. (Do I sound defensive? Hi Hi. Ah, even I am
subject to brand loyalty :-)

>A question: is there any reason the seller and I can't come to an agreement to
>simply waive the CC&Rs that I don't like? Especially if this is included in a
>purchase contract in some way?

Probably not. The CC&R is NOT just an agreement with you and the seller,
in most cases (though I suspect they do exist that way). You NEED to
check the nature of the CC&R's, they usually involve a large tract,
the original owner of ALL the lots made the restriction on each one
she sold and it runs with the land. Any of the owners in the group may
then have a right to enforce it. It is to all the lot owners benefits.
That's the theory.

>The part I don't see is what a homeowner's association would have to say about
>this one way or another... unless they have some way of preventing me from
>buying under the conditions I want.

Yes, good point. The association will likely want to enforce the original
restrictions since they were designed to inure to the benefit of all the
lot owners, not just the individual seller. The original owner of the
whole subdivision is the one who set it up that way, and individual
lot owners will all be subject to the deed restrictions that will then
appear in the chain of title of all of them. Yuck-o.

>Luckily, there's plenty of houses with no restrictions whatsoever here in New
>England.

Good for you. Many places this does not happen.

2544. New Ham -- help with antenna & grounding

Newsgroup: rec.radio.amateur.misc
Date: 1995-08-10 00:00:00 UTC
From: U54293@uicvm.uic.edu
Message-ID: <95222.122558U54293@uicvm.uic.edu>
Source record: 240689
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.antenna

I am a new ham (KB9LFR)..tech class, probably going to take the 5wpm soon..

I have a collins S-line HF rig that I plan on using after I go tech+.
My problem: I live in a duplex (we own our side of the duplex)...My shack
is in a small alcove off of the closet in the master bedroom (on the 2nd floor)
.

1) What can I do to provide grounding to this station (being that I am so far
away from the real-ground and from any water pipes)?

2) What can I do about an antenna? We have no attic (my shack is the closest
thing to an attic that we have)...should I:
a) Drill into my shack ceiling to go right up to the roof? If so, what
precautions should I take to insure that water/snow etc. wont leak into
my shack?

b) Run feedline above the celing to the back or side of the yard and from
there go to an antenna (eitheron the roof or next to the house)??
Is there a chance the feed-line might get warm enough to present a fire
hazard with it above my ceiling?

3) regardless of my antenna location, how do I properly protect it and my
self/family/equipment from lightning and static discharge?

4) If I put the antenna on the roof, how do I prevent my neighbor from
being exposed to RF? would a verbal warning and a sign on the roof
be sufficient (since this is a duplex, we share a common roof..I have
my side and he has his...but would he be in danger from RF if I was
transmitting while he was on his side of the roof)??

Probably the simplest thing to do would be an indoor antenna, but I hear there
might be health-risks with that (and I don't want to expose my family to
any unecessary risks...especially with 2 small children).

Please help.. I expect to be quite eager to get-on-the-air once I pass the 5wp
m.

BTW, anyone know where to get a manual for a collins 32s1 transmitter, or for
the collins 516F (i think) powersupply and for the collins
non-vfo station controller?

thanks..

-boB (please reply via email)

: A question: is there any reason the seller and I can't come to an agreement to
: simply waive the CC&Rs that I don't like? Especially if this is included in a
: purchase contract in some way?

Unfortunately, no. The CC&R's follow the land title, and aren't modifiable
by the owner alone. Usually there is some procedure (involving a
home owners' association, or some such) that is the route required
within the CC&Rs to modify them. An individual owner doesn't have
this choice. If they did, then many of the problems I have with
CC&R's would be mute...

: The part I don't see is what a homeowner's association would have to say about
: this one way or another... unless they have some way of preventing me from
: buying under the conditions I want.

Well, they do. If there are any CC&R's on the property that you don't
like, then you have to go thru the HOA to get them changed. They
have all the power.

: Luckily, there's plenty of houses with no restrictions whatsoever here in New
: England.

Well, lightening creates heat (and lots of it), and heat in concrete
causes expansion, and fast expansion in concrete causes
'shatter/crack/explode'. I would not want to bet the foundation of
my house that I am wrong. Would you?

2548. Stepper Motors.....

Newsgroup: rec.radio.amateur.misc

I have a lot of old stepper motors from old DECWriter salvage. etc.
I would love to use these, but I do not know the color combinations.

The two different types of motors have either of these color
wires combinations:

or
black red
yellow orange
-- yellow
red ------
gray green
brown
black

(Many of these stepper motors look piggy backed; -- some of the wires
comming out of the top motor, and some from the bottom.)

Is there a standard color coding for these wires? Any guesses?
I can sequence these motors with my computer, but I need a little
more info.

Any help gratefully appreciated!

Date: 1995-08-10 00:00:00 UTC
From: WWHITBY@bdm.COM
Message-ID: <s029c627.029@lan.mcl.bdm.com>
Source record: 240696

I usually carry two HTs, scanner, spare antennas, and spare batteries in my camera bag with my camera equipment. The bag has been x-rayed several times with out any problem to the electronics. I did have a security man who asked to look inside of it once. I smiled (knowing it was crammed full) and said sure. He took one look inside and was satisfied.

When I go to the airport to pick someone up, I usually carry my scanner. Before I go through the metal detector, I make sure its on and hand it to a security guard. As long as they can see it working or open the squelch they are satisfied.

For David Gingrich - I''ve started leaving my pager in the car. It got to be too muchtrouble going through security and I lost the numbers when I had to show them it works.

Source record: 240697

Like many on the net, I had some fear that I would have to go through some pagan ritual at the gate when I tried to carry my HT on the airplane. I used a small yellow Pelican case to hold the HT, spare batteries, antenna, etc. I merely put the case through the X-ray machine, and much to my surprise, nothing at all. I have repeated this procedure numerious times on various airlines, all with the same result, ie nothing. My experience is that it is a non-issue to carry your assembled and live HT on the plane - just do it.

Not to put too fine a point on this (I like Ten-Tec), but the reason you hear so much praise for Ten-Tec service is that you're likely to *need* Ten-Tec service. Everyone I know who's had one has had a chance to find out about Ten-Tec service first hand. OTOH, most Icoms and Yaesus are like the Energizer Bunny, they just keep working, and working, and working. Just a point to ponder.

>and an indoor dipole.
>
>When these bands are open, they are OPEN!

Even when the bands are not open they can surprise you. During Field
Day, when VHF/UHF propagation really stank from our site, I was still
able to make contacts at respectable distances with my IC-202 and
IC-402 2m and 70cm portables, at 2 watts PEP off C cell batteries,
and using only the inboard vertical whips (held sideways).

The main thing needed is *activity*. When there are lots of stations
on, you'll make lots of contacts, even with very modest equipment.
Of course beams and power are like chicken soup, they can't hurt,
but don't give up just because you don't have them.

Gary

ZCZC AE19
QST de W1AW
DX Bulletin 43 ARLD043
From ARRL Headquarters
Newington CT August 10, 1995
To all radio amateurs

SB DX ARL ARLD043
ARLD043 DX news

This week's bulletin was made possible with information provided by Tedd, KB8NW, the OPDX Bulletin and Contest Corral from QST. Thanks to all.

COCOS ISLAND, TI9. Jose, TI9JJP, should be active until August 15. Try 7050 kHz between 0200 and 0530z. Also check 14195 kHz throughout the day. He also works 24940 kHz around 2330z. He will return to the island for an October 4 to 20 stay. QSL to Jose Pastora, PO Box 330, 1000 San Jose, Costa Rica.

COCOS KEELING ISLAND, VK9C. Uwe, DJ9HX, will be active as VK9CJ until August 16.

REVILLA GIGEDO ISLANDS, XF4. Another DXpedition slated for September is being planned by Nellie, XE1CI.

CAMBODIA, XU. PA3BTQ should be active as XU6TQ for two weeks in September. After that it is on to YA-land where he will attempt to obtain permission to operate, though chances are ''slim.''

MYANMAR, XY. It has been reported that Ray, HS0/G0N0M and a group of Japanese operators were on as XY1HT for a few days to demonstrate SSTV and RTTY to government officials. 154 QSOs were made.

VIETNAM, 3W. Nickolay, 3W5FM, has been active on CW, SSB and RTTY, mainly on 20 meters from 1000 to 1400z. JA operators report RTTY also on 24923 kHz at 1044z and 18103 kHz at 1050z. Nickolay should remain in Vietnam until September or possibly October. QSL 3W5FM and UA0FM/3W via PO Box 66, Vladimir 600011, Russia.

WESTERN MALAYSIA, 9M2. Neville, G3NUG, plans to be active from AS-046 August 11 to 14 and from AS-073 August 17 to 21. He will operate SSB only. Check 14260, 18128, and 7055 kHz, split 5/10 up.

QSL via G3NUG or via bureau.

BAHAMAS, C6A. Chuck, KG9N, will be sign KG9N/C6A from Abaco Island August 11 to 18. Some RS-12 action is planned as well as participation in the WAE CW Contest.

KERGUELEN ISLAND, FT8X. Jean Jacques, FB1LYF, ex J28CW, will be on this island for a year starting sometime in November.

JORDAN, JY. Admir, 4X6TT, will be traveling to Amman, primarily to help do the work on JY74 cards, though he will be active as JY8TT.

EL SALVADOR, YS. Kent, N2MIP, will be on the air as YS1ZKR November 5 to 11 with what may be the first ever satellite opportunity for those needing El Salvador. He will operate HF during times that there are no windows to the birds. Satellite operation will be primarily on Oscar 13, with Oscar 10 as backup.

UK SOVEREIGN BASE AREAS ON CYPRUS, ZC4. OK1RF and OK1RI plan to be on the air as ZC4C August 6 to 18 with 160 to 10 meter CW and SSB. They will also be in the WAE CW Contest. QSL via OK1RI.

SILENT KEY. It is with deep sadness that we report the death of Miriam West Smith, KB4C, head of Production and Circulation and the wife of Editor Carl Smith, N4AA, of the QRZ DX Bulletin.

THIS WEEKEND ON THE RADIO. The Great New Mexico Chili Chase is from 1800z August 12 until 1800z August 13 on phone and CW. Exchange signal report and state/province/DXCC country. New Mexico stations will exchange signal report and county.

The Maryland-DC QSO Party is from 1600z August 12 to 0300z August 13, and 1600 to 2400z August 13. Operate phone, CW or both. Exchange signal report, state/province/DXCC country for QTH and entry category, either Club, QRP, Mobile, Novice/Technician or Standard. MDC stations will exchange county for their QTH.

For more information on these events see pages 114 and 115 in July QST.

A note about concrete reinforcement and lightening.

As a teenager, I witnessed the house across from mine take a lightening hit one summer afternoon. The neighbor that owned the house was away and I was charged with "watching" their house and feeding their cat. What a "watch"!!! The cat could not be found for days!!!

After calling the fire dep't. I went across the street to assess the damage. The house, a tri-level (split-level, etc.) smelled of fire, but I could find none. When I went into the lower level room next to the wall where the stroke appeared to have struck, I found the paneling on the outside wall blown off and in the floor. I also heard water running and found that the water heater in a storage room to be leaking.

Upon more careful scrutiny I found that the lightening stroke had hit the top of a chain link fence that ran around the back yard and butted up to the concrete wall of the room with the damaged paneling. The top pipe of the fence had a large burned (melted) spot about 1" in dia. and about three feet from where the fence stopped against the wall. What was amazing was that when you looked straight up from the burned place on the fence you looked right through the elements of the house's television antenna, about 25 feet off of the ground. The TV, just inside, was not damaged (the paneling was laying on top of it) even though the antenna was connected.

The concrete wall had a (approx. 3") hole knocked in it right beside the fence and a piece of rebar was showing in the concrete. On the inside of the wall, where the paneling HAD been, there were numerous places where concrete had literally exploded from the wall, revealing the rebar within. At the water heater, which was about 40 linear feet of wall from the (heavily) damaged area, there was a hole in the wall where the lightening had exited and arced into the water heater, puncturing the tank.

There is little science that one can apply to the behavior of lightening. Precautions should abound. I had completely forgotten about this event until I saw this post.

Regards,
Clif

One development I looked at when I moved to Tucson had antenna restrictions (on
3.3 acre lots) and specifically allowed any and all livestock in the CC&Rs. I
had thoughts of exchanging ham radio for pig farming.

Hello all,

I will be traveling to France next spring and I am wondering if there is a special license I am going to need or anything like that. Right now I have a Technician class license in the USA. I am planning on bringing my ft-530 handheld. Will that radio work with French repeaters? Are there different pl's or different band coverage? My ft-530 has extended receive and gets from 110-180Mhz and 400-550Mhz. Will that be a problem becuase I know in some countries scanners are not allowed. It is not a real scanner but may be perceived as one.

Any help on this would be greatly appreciated. E-mail me or post here. Merci!

I am on my third Ten-Tec rig. All work fine and none have ever needed
servicing. I have had questions, both pre and post sales, and they
take their time and are very helpful.

I disagree with Ten-Tec's needing more service. In fact, people
typically hold onto their Ten-Tec's forever. I'll guarantee you if
they needed service so much, people would not be buying them and
keeping them. In fact, Ten-Tec's sales over the past few years have
doubled. Better radios and better service than the rice boxes.

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 10/2330Z AUGUST 1995 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 10 AUGUST AND FORECAST FOR 11 AUGUST - 13 AUGUST

1A. SOLAR SUMMARY
Activity: very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 73/9

GOES satellite data for 09 Aug
Daily Proton Fluence >1 MeV: 5.8E+05
Daily Proton Fluence >10 MeV: 1.6E+04
Daily Electron Fluence >2 MeV: 2.7E+08 (moderate)
X-ray background: A2.8
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
11 Aug 12 Aug 13 Aug
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 11 Aug: 72/8

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: quiet to unsettled

Estimated Indices : A K Observed A Index 09 Aug
Learmonth 12 3333 3222
Fredericksburg 12 20
Planetary 18 19

Observed Kp for 09 Aug: 4433 3333
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
11 Aug 16 Quiet to unsettled
12 Aug 20 Quiet to unsettled, with isolated active conditions.
13 Aug 20 Mostly unsettled, with isolated active conditions.

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND
DATE LOW MIDDLE HIGH

10 Aug normal normal normal
PCA Event : None.

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
11 Aug normal normal fair
12 Aug normal normal normal
13 Aug normal normal fair

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Observed
DATE T index MUFs at Sydney
10 Aug 38 15 to 40% above predicted monthly values

Predicted Monthly T index for August: 15

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T index MUFs
11 Aug 30 Near predicted monthly values during local day,
10-20% enhanced at night.
12 Aug 30 Near predicted monthly values during local day,
10-20% enhanced at night.
13 Aug 30 Near predicted monthly values during local day,
10-20% enhanced at night.

COMMENT: Darwin MUFs: near predicted monthly values, sporadic E
observed at 12UT.
Townsville MUFs: near predicted monthly values.
Hobart MUFs: near predicted monthly values, with blanketing sporadic
E observed at 17, 20-21UT.

>question exam" all the way through she feels like they tried to zap her
>because she's female or something. Not that it stopped her ...

Was this in the Triangle area? RARS, JARS and TEARA VEs all use the
10 *mulitiple choice* questions or 1 minute solid copy, whichever favors
the applicant. I know, because I just passed 20 wpm at RARS last week
(and flunked 20 wpm at TEARA a few weeks before and I'm a member of JARS
and RARS). I did note that, while my code practive program (Morse Academy)
tended to spell everything out, the ARRL VEC tapes used by RARS tended to
use a lot more abbreviations. Fortunately, I passed anyway (10 of 10),
but I WOULD NOT have passed had they required a minute of solid copy,
as was required in 1970 when I got my General (and Advanced).

I'd check with the VE ahead of time. I thought they were *required* to
give the 10 question test. The multiple choice is optional (I think), though
most VEs I know of use it.

Linux HAM-HOWTO, Amateur Radio Software List
Terry Dawson, VK2KTJ, terryd@extro.ucc.su.oz.au
v1.8, 9 July 1995

It is hoped that this document will assist Amateur Radio operators in
finding and trying the various amateur radio software that has been
written for or ported to Linux. It is also hoped that as a consequence
of this information being available that more amateur radio operators
will choose Linux as the platform of choice for their experimentation,
and that software developers will choose Linux as the platform for
their software development, further expanding the role of operating
systems like Linux in the Amateur Radio field. This document also
provides some detailed information on how to configure and install
some of the more important pieces of software.

1. Introduction.

This list was prompted by comments that had been expressed in the
various Linux newsgroups about the number of amateur radio operators
that were involved with Linux. It is now clear that Linux is becoming
a popular platform for Amateur Radio development work.

This list was originally called the RADIOLINUX list, but Matt Welsh
suggested that there was no reason why it shouldn't be distributed
with the Linux Documentation Project documents, so it has been renamed
the HAM-HOWTO and will be made available with the rest of the Linux
Documentation. I make no apologies for the name.

1.1. Changes from the previous version

Additions:
Added Brian Lantz's TNOS.
Added Philip VanBaren's audio spectrum analyser.
```

Added Emarit Ranu's FT-890 controller program.

Corrections:
Updated Packet Cluster information.
Updated AX.25 kernel software.
Updated AX.25 utilites information.
Updated howto configure PI card.
Updated rspf daemon information.

2. Where to obtain new versions of this document.

This list will be periodically posted to the comp.os.linux.announce newsgroup, and to the HAMS list on niksula.hut.fi.

It is also available from the following World Wide Web sites:

The Linux Documentation Project runs a Web Server and this list appears there as The HAM-HOWTO <http://sunsite.unc.edu/mdw/HOWTO/HAM-HOWTO.html>.

Dennis Boylan N4ZMZ <dennis@nanovx.atl.ga.us> makes it available at the following three locations:

www.com <http://www.com/linux/radio/index.html>, www.hboc.com <http://www.hboc.com/linux/index.html> and www.lan.com <http://www.lan.com/linux/index.html>.

John Gotts N8QDW <jgotts@engin.umich.edu> makes it available at: www.engin.umich.edu <http://www.engin.umich.edu/~jgotts/linuxhamsoft.html>.

Dan Todd <dantodd@fusilli.ucdavis.edu> makes it available at the following two locations: wheel.dcn.davis.ca <http://wheel.dcn.davis.ca/~dantodd/Linux/HAM-HOWTO.html>, and fusilli.ucdavis.edu <http://fusilli.ucdavis.edu/Linux/HAM-HOWTO.html>.

Alan Hargreaves VK2KVF <alan@dap.CSIRO.AU> makes it available in Australia at: www.dap.csiro.au <http://www.dap.csiro.au/RadioLinux>.

Please let me know if you'd like to make it available somewhere too. I'd like to see it on some Web Servers that are accessible from radio.

3. Satellite Software.

The following software is for use in experimentation with Satellite communication.

3.1. MicroSat Ground Station Software

Author
John Melton, G0ORX/N6LYT, g0orx@amsat.org and Jonathan Naylor G4KLX, g4klx@amsat.org

Description
Microsat Ground Station software.

Status
BETA. Version 0.9-Xaw released.

System requirements
Alan Cox's kernel based AX.25 support ver 1.1.12 or better. X-Windows. The programs make use of the Athena Widgets and look much better with the 3D libraries.

Detail
This software allows you to use of a KISS tnc to directly communicate with the Microsat series of satellites. It provides an Athena Widgets based X-Windows interface, and allows you a comprehensive range of means of interacting with the satellite. The software should work with any window manager.

The software provides the following programs:

xpb:
broadcast monitor

xpg:
ftl0 file upload program, message upload program

xtlm:
telemetry display program

downloaded:
downloaded file list viewer

directory:
directory list viewer

message:
message preparation application
viewtext:
uncompressed ASCII text file viewer

viewlog:
display the contents of some log files

xweber:
special program for downloading webersat images

phs:
general purpose PACSAT header stripper

Where and How to obtain it.
John's software is available from: ftp.ucsd.edu
<ftp://ftp.ucsd.edu/hamradio/packet/tcpip/incoming/microsat-0.9-Xaw.tar.gz>
or ftp.funet.fi
<ftp://ftp.funet.fi/pub/ham/satellite/microsat/microsat-0.9-Xaw.tar.gz>.
Please check for new versions.

Licensing/Copyright
GNU Public License. Freely redistributable, No warranty.

Contributed by:
John Melton, G0ORX/N6LYT, Alan Cox, GW4PTS, Jonathon Naylor, G4KLX

3.2. SatTrack - Satellite tracking program

Name
SatTrack

Author
Manfred Bester, DL5KR, manfred@ssl.berkeley.edu, (510) 849-9922

Description
Satellite realtime tracking and orbit prediction program with X11 color graphics.

Status
Version 3.1 has been released.

System requirements
A vt100 terminal and or X11 server. A Maths Coprocessor is useful, but not essential, for good performance.

Detail
SatTrack is a satellite tracking program that has been written in 'C' language on a UNIX workstation. It provides two different live displays, for single or multiple satellites, and two different orbit prediction facilities. Cursor controls used in both live displays are compatible with the VT100 standard, which allows the program to be run basically from any terminal. An optional X Window graphics display shows the typical world map tracking chart. The orbit prediction can be run either interactively or in a batch mode. In the latter case all necessary parameters are specified on the command line. The program uses the NORAD/NASA two-line Keplerian element (TLE) sets directly.

The current version of SatTrack can track a single satellite and/or display multiple satellites for a single ground station. It also can control suitable ground station hardware, like antennas and radio equipment, and has an autotrack mode in which it switches automatically between a number of specified satellites. For calibration purposes tracking of the Sun and the Moon are also provided. Future releases will provide more options. SatTrack requires about 5 MB of disk space in the full distribution with eight different world maps (2 styles, with 4 different sizes each, to fit everyone's screen and taste) and less than 1.5 MB of memory at run time. More information can be obtained from the SatTrack WWW Home Page
<http://ssl.berkeley.edu/isi_www/sattrack.html>

Compiling the software under Linux is quite straightforward. Manfred has designed the Makefile to compile the software directly under your home directory, this is easy to change.

The steps I took were:

```
# cd /usr/src
# export HOME=/usr/src
# gzip -dc sattrack.V3.1.tar.gz | tar xvf -
# cd SatTrack/src
# vi Makefile
{Comment SUN4 compile options}
{Uncomment the linux options}
{Select the options you want}
# make
```

Where and How to obtain it.
SatTrack can be found at: ftp.amsat.org
<ftp://ftp.amsat.org/amsat/software/Linux/sattrack.V3.1.tar.gz>
or ftp.jvnc.net
<ftp://ftp.jvnc.net/priv/kupiec/sattrack/sattrack.V3.1.tar.Z> or
the SatTrack WWW Home Page
<http://ssl.berkeley.edu/isi_www/sattrack-3.1.tar.gz>

Licensing/Copyright
The software is Copyright of Manfred Bester. It can be used
without special permission for non-profit, non-commercial use.
For commercial applications a license from the author is
required.

Contributed by:
Manfred Bester, DL5KR

4. Shack Automation Software.

Software for simplifying tasks in the shack. Examples might include
software for controlling the newer breed of radios, logging programs,
QSL database, or antenna rotation.

4.1. FT-890 remote control

Author
Emarit Ranu, drranu@holly.ColoState.EDU, KG0CQ.

Description
A simple program to control a Yaesu FT-890 transciever via its
CAT port from linux.
Status
Working

System requirements
Yaesu FT-890, Yaesu FIF-232C interface converter or homebuilt
equivalent (Feb 1993 "QST", page 37). Linux, serial cable.

Detail
The program is started with one parameter specifying the com
port to use. Once started the program is menu driven. Future
versions will support an X-Windows interface.

Where and How to obtain it.
The software is currently only available from the author by email.

Licensing/Copyright
You may copy this program millions of times, the only restrictions are:

o You may not charge ANYONE for the program itself.

o You may not distribute modified versions of the program.

o If you distribute the program, it MUST be the ORIGINAL tar file as received by the author. The README file has to be included.

Contributed by:
Emarit Ranu, drranu@holly.ColoState.EDU

5. Packet Radio

Software for use in conjunction with, or for facilitating packet radio.

5.1. Kernel Based AX.25 networking.

Author
Alan Cox, GW4PTS, iialan@iifeak.swan.ac.uk and Jonathon Naylor, G4KLX, jsn@cs.nott.ac.uk

Description
Software that allows the Linux Kernel to perform AX.25 networking.

Status
ALPHA. Still under development. In a working state.

System requirements
Linux kernel 1.3.0 or later.

Detail
Alan's software provides the programmer with a berkeley socket based interface to the AX.25 protocol. AX.25 sockets can opened for either connected, or connectionless modes of operation. Support to allow tcp/ip over AX.25 is provided. The user applications have been written by Jonathon Naylor G4KLX. Jonathon has recently added NetRom support and provided fixes and other enhancements to the code. The software comes in two parts, a kernel patch, and the user programs. The user programs included are:

axassociate
to associate a particular AX.25 callsign with a userid on your system.

axattach
to convert a serial device into a KISS device.

axl
an AX.25 listener designed to start a PMS when it receives an incoming connection. The PMS is still very new.

axsetcall
to change the callsign of a port.

beacon
generated beacon messages every 30 minutes.

call
A linemode AX.25 connection program. Call allows you to make connections to other AX.25 nodes. It provides file transmit and receive capabilities, and newer versions allow YAPP binary file transfers.

listen
a packet trace tool for radio links.

mheard
a program to display callsign heard on radio ports.

netromd
a daemon program to generate netrom routing broadcasts.

noderest
a program to restore netrom routing information from a file.

nodesave
a program to save netrom routing informtion to a file.

nrparms
a program to configure a netrom interface.

rip98d
an implementation of the rip98 routing protocol.

Where and How to obtain it.
There are a number of different versions of the software. You must choose the one that suits your version of Linux kernel. Software for kernel versions older than 1.3.* is available from:
sunacm.swan.ac.uk
<ftp://sunacm.swan.ac.uk/pub/misc/Linux/Radio/>

More detail on where and how to obtain the software is provided in the AX.25 section of the `Installation, Configuration, Hints and Tricks' chapter below.

Licensing/Copyright
Most of the software is covered by the GNU Public License, some of the software is Copyright by the Regents of University California Berkeley.

5.2. JNOS

Author
Brandon Allbery, KF8NH, bsa@kf8nh.wariat.org

Description
Brandon ported JNOS to Linux. His port is currently of the 1.09 (aka 1.08df) release of JNOS. Future versions will probably be based on Doug Crompton's evolution of 1.08df. Brandon suggests that JNOS for Linux is primarily of interest to people with existing DOS-based NOS configurations (especially server/switch configurations) who wish to switch to Linux or to escape the 640K barrier.

Status
The current version is ALPHA.4. Brandon is still tracking down bugs, as well as evolving new features.

System Requirements.
Any version of Linux along with ncurses 1.8.1 or 1.8.5 (the latter is preferred). Optionally you will require Linux networking (at least loopback) and slattach (kernels pre-1.1.13 or post-1.1.20 required for this).

Detail
If you include the Linux networking code in addition to JNOS, you can link the two by a slip link running over a pty, so that Linux can provide services to your radio users. In this way you can easily add servers without having to build them into JNOS itself. Brandon has supplied the following list of known bugs:

o some servers seem to be causing unexplained exits.

o PPP is reported not to work in ALPHA.4, although it worked in ALPHA.3.

o BBS forwarding when convers is compiled in but not configured causes core dumps.

o the finger server is getting bad filenames.

o the bbs W command is case-munging filenames.

Where and How to obtain it.
You can obtain JNOS for Linux ALPHA.4 at: ftp.ucsd.edu <ftp://ftp.ucsd.edu/hamradio/packet/tcpip/linux/j109lxA4.tgz> ncurses is available on most Linux ftp sites.

Licensing/Copyright
Brandon's modifications to JNOS are public domain. Most of the pre-existing NOS code is copyrighted and restricted to non-commercial use by the various contributors from Phil Karn on.

Contributed by:
Brandon Allbery, KF8NH

5.3. TNOS

Author
Brian A. Lantz, brian@lantz.com

Description
TNOS is a NOS derivative that is being actively supported and which is avialable for both DOS and Linux. It features enhancements not found in other NOS versions.

Status
The current version is 1.14 and is stable.

System Requirements
Kernel networking slip support if you want to link the normal Linux network facilities with TNOS. A kiss tnc.

Detail
Brian maintains a World Wide Web server which contains up to date information on TNOS, you can find it at www.lantz.com <http://www.lantz.com/tnos/current/linux/>.

Where and how to obtain it
The current version of TNOS is always available from: www.lantz.com <http://www.lantz.com/tnos/current/>, sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/apps/ham/tnos/>, or ftp.ucsd.edu <ftp://ftp.ucsd.edu/hamradio/packet/tcpip/linux/>.

Licensing/Copyright etc.
Free for use by amateur radio operators and educational oraganisations

5.4. N0ARY Packet BBS for UN*X

Author
Bob Arasmith, N0ARY, ported to Linux (and others) by Bob Proulx, KF0UW, rwp@fc.hp.com

Description
A packet bbs implemented under UN*X.

Status
ALPHA. Bob is running version ARY-0.9 on both Linux and HP-UX. The next version from N0ARY which is called 4.0 is in alpha test/development release. Bob has not been able to bring this online yet and is still running 0.9+kf0uw mods. Bob has about half it working with Alan Cox's AX.25 kernel which would be the desirable combination.

System Requirements.
Linux installation, C Compiler, plus HAM radio TNC hardware.

Detail
This bbs has an excellent packet user interface. It has a compatible set of commands with the RLI bbs so users will be familiar with it immediately. It then extends the command set

to be a very nice natural language style interface (e.g "list at allus about KPC-3"). Many csh style bang commands are supported. Also included is a mail interface to provide a packet to internet gateway.

Currently you need to customize the source code for your installation so you need some C programming proficiency.

Where and How to obtain it.
For a Linux version or for Linux information send mail to rwp@fc.hp.com. For a SunOS version contact bob@arasmith.com. This code is not packaged for distribution yet since it is not past the alpha stage of development.

Licensing/Copyright
Copyright by Bob Arasmith, N0ARY, but freely redistributable.
Contributed by:
Bob Proulx, kf0uw, rwp@fc.hp.com

5.5. MBL/RLI message to NNTP and email converter.

Author
SM0OHI, pme@it.kth.se

Description
Software that will convert incoming MBL/RLI messages into either NNTP or RFC-822 formatted mail messages.

Status
Development, not yet released.

System requirements
Unknown.

Detail
This software would be ideally suited to those who want to establish a mail and news gateway between conventional tcp/ip networks and the amateur radio mail network.

Where and How to obtain it.
Not yet availale.

Licensing/Copyright
Unknown.

Contributed by:
SM0OHI

5.6. Packet Cluster Node software

Author
Franta Bendl, DJ0ZY, and Bernhard ("Ben") Buettner, DL6RAI, root@dl6rai.muc.de

Description
A PacketCluster like system running on Linux.

Status
Released in March 1995.

System Requirements
Linux Kernel version 1.1.50 or greater with Alan Cox's AX.25 version 025 driver, TCP/IP networking, SysV IPC. Also needs Perl and KISS TNC hardware on serial device.

Detail
PacketCluster nodes have been available for about six years. The original software was written by Dick Newell, AK1A, and is running under DOS. clx is a system which clones a PacketCluster node. To the outside user commands and features are mostly identical, remote PacketCluster nodes, which can be networked, don't see the difference between a generic PacketCluster node and clx. So it fits well into an established network of PacketCluster nodes.

clx is not a user application, it is network node software. As such it is not of much use for the individual amateur. SysOPs of PacketCluster nodes with some experience on both PacketCluster and Linux will find this application interesting.

Here are some of the features of CLX:

o It is fully compatible with the internal PCxx protocol and from a users' point of view. It allows multitasking and different priorities for different things.

o The software detects looping DX spots without generating endless messages. clx filters out such duplicate information. We have implemented a concept which allows us to connect the network at multiple points, which would formerly have been called a "Cluster Loop". clx knows of so-called "active" and "passive" links. The outcome is that more DX information is seen by clx.

o An interface to call your external programs (even dialog programs).

o clx uses modern programming concepts like shared memory for common data, lex & yacc to implement command language, shared libraries to keep binaries small (this is still on our wish list), remote procedure calls for inter process communication. It is strictly modularized with its own dedicated process for every major task.

o Comprises the following modules:

con_ctl
interfaces AX.25 kernel code and provides a socket for local users.

rcv_ctl
manages receive spooling.

snd_ctl
manages transmit spooling.

rm_disp
receive message dispatcher, forwards messages to other
processes.

usr_req
user database requests, forks a process for every database
task to make it run in the background. The background process
later sends the results directly to send_ctl.

mb_ctl
mailbox control. The mailbox keeps messages in a file system,
header information is stored in the database.

usr_ctl
user administration (logins, logouts, logbook).

usc_mng
manages external user commands and command extensions.

iu_com
inter user communication (talk, conference).

send_ctl
transmit spooling, handling priorities.

icl_com
inter node communication (processing and generating PCxx
messages).
clx_ctl
system administration, installing shared memory pages.

int_com
manages internal program communications.

o The following is the only application program which can be run
on the console:

loc_usr
allows console operator(s) to log in like a normal user.

Future enhance planned are:

o A console monitor to watch ongoing activities

o Speed optimization

o An internal clx protocol

o An additional command shell for experienced users

Where and How to obtain it:
You can obtain clx from ftp.uni-erlangen.de <ftp://ftp.uni-erlangen.de/pub/public/pc-freeware/hamradio/packet/packclus/clx> or ftp.ucsd.edu <ftp://ftp.funet.fi/pub/ham/unix/Linux/cluster>

There are five files that make up the package:

o 00index

o clx_105.tgz

o install.clx

o README_1.06

o upd_106.tgz

Licensing/Copyright
clx is available for non-commercial use, but the authors want to keep track of who is using their product, so before you can actually use the software you have to ask for an encrypted callsign string to be placed in the configuration file. You must send mail to <clx_us@dl6rai.muc.de> to organise this.

Contributed by:
Bernhard ("Ben") Buettner, DL6RAI

5.7. Single floppy disk AX.25 router.

Author
Alan Cox, GW4PTS, iialan@iifeak.swan.ac.uk

Description
A single floppy disk version of linux with enough software to allow a PC to act as an AX.25/IP router.

Status
Development, not yet released.

System requirements.
As for any Linux system a 386SX class PC or better.

Detail
No detail yet.

Where and How to obtain it.
Not yet available.

Licensing/Copyright
Unknown/Undecided.

5.8. TNT.

Author
Mark Wahl, DL4YBG, DL4YBG @ DB0BLO.#.DEU.EU, wahlm@zelator.de

Description
A Hostmode terminal program for TNC's that support the WA8DED hostmode protocol.

Status
Version 0.8 is reportedly stable.

System requirements
TNC supporting WA8DED hostmode protocol, serial line.

Detail
TNT is a full featured hostmode terminal program. Compiling it on Linux is as difficult as untarring the source and typing `make'. It provides both a `dumb' terminal and X11 version. It comes with some comprehensive documentation which describes its features in some detail. Its main features are:

Multiple sessions:
TNT supports multiple packet radio connections on virtual screens that you can switch between. Each session window provides split screen (seperate transmit and receive text) operation with a status line. Commands can be entered in either a command session, or in any terminal session using a command key. Each of the virtual screens can be larger than the physical screen and can be scrolled around.

Data capture, file transfer and logging:
A number of options are available for logging received text to files. You can log transmit, receive or both to a log file. You can overwrite or append received data to existing files. You can use the `autobin' protocol to transmit or receive binary files.

Remote Shell operation:
You can provide a shell to remote users so that they can access other programs on your computer. You can also run a program and direct its input/output to a channel so that users can use it.

Redirection of devices to a channel:
TNT allows you to redirect input/output from a channel to a device, a modem for example.

Umlaut conversion:
TNT provides umlaut conversion if necessary.

Remote mode:
Remote users can issue command themselves if allowed to do so.

Socket mode:
You can configure tnt so that it opens a socket for users to telnet to that allows them operation just as you have from the console. This is useful where your linux machine is on an

ethernet and you want other terminal on the net to have use
of your radio.

Where and How to obtain it.
The software is available by anonymous ftp from: ftp.funet.fi
<ftp://ftp.funet.fi/pub/ham/unix/packet/tntsrc08.tgz>. This site
is mirrored at a number of places so you will probably find it
at other places as well.

Licensing/Copyright
GNU Public License. Freely redistributable, no warranty.

Contributed by:
Steffen Weinreich, DL5ZBG.

5.9. IPIP encapsulation daemon.

Name
Mike Westerhof's IPIP encapsulation daemon.

Author
Mike Westerhof KA9WSB (original code), then Bdale Garbee N3EUA
(port to BSD), then Ron Atkinson N8FOW and John Paul Morrison
(port to Linux), then Bdale rolled it all back together again.

Description
A daemon that will allow you to use your linux machine as an
IPIP encapsulating gateway.

Status
Ron is running this code himself, and the other version have
been run quite successfully.

System requirements
KISS TNC, any version of Linux supporting RAW sockets.

Detail
If you've ever used an internet gateway from your amateur packet
radio you have probably been connected by an encapsulation
gateway of some descpription. Most run KA9Q's NOS and DOS, but
others run Unix and this daemon. It allows you to encapsulate IP
within IP, so that you can 'tunnel' IP connections over the
Internet. The software allows you to connect a KISS TNC to your
linux machine and to have all datagrams received on it carried
across the Internet to a similar gateway. Bdale has installation
instructions in the package.

Where and How to obtain it.
This software is available from the col.hp.com
<ftp:///col.hp.com/hamradio/packet/etc/ipip/ipip.tar.gz> ftp
site.

Licensing/Copyright etc.
Freely distributable, though Bdale asks that if you use the code

and like it you might send him a QSL card or a postcard.
Contributed by:
Ron Atkinson, N8FOW, and Bdale Garbee, N3EUA

5.10. AXIP encapsulation daemon.

Name
Mike Westerhof's AXIP encapsulation daemon.

Author
Mike Westerhof KA9WSB, ported to Linux by Ron Atkinson N8FOW.

Description
A daemon that will allow you to use your linux machine as an
AXIP encapsul ating gateway.

Status
Not properly tested, but assumed to work ok.

System requirements
KISS TNC, any version of Linux supporting RAW sockets.

Detail
This daemon is the partner to the IPIP encapsulation daemon. It
allows you to encapsulate AX.25 frames in IP to carry them
across the Internet. This is useful for linking AX.25 networks
in remote areas. Ron has supplied a Makefile for linux, and with
it the software compiled without errors on my system running a
recent version kernel. Ron has also written some README files
which give you the detail necessary to compile the system and
the original documentation describes how to configure it.

Where and How to obtain it.
This software is available in the sunsite.unc.edu ham apps
directory
<ftp://sunsite.unc.edu/pub/Linux/apps/ham/ax25ip.tar.gz>.

Licensing/Copyright etc.
Freely distributable so long as the original copyright notice is
not removed.

Contributed by:
Ron Atkinson, N8FOW

5.11. Ping-Pong Convers Server

Name
Fred Baumgartens Convers Server for Linux.

Author
Fred Baumgarten, DC6IQ, <dc6iq@insu1.etec.uni-karlsruhe.de>

Description
This is a version of the convers server that allows multiple
users to simultaneously chat with each other in a round-table

style conversation. It is compatible with the NOS convers servers, but provides extra facilities such as saving/restoring of Personal Text and Chanel Topics.

Status
In use of a number of popular convers servers, appears very stable.
System requirements.
Linux, GNU make, C compiler.

Detail.
Complete installation instructions are included in the INSTALL file that is included in the distribution.

Where and How to obtain it.
A distribution of this software is available in the sunsite.unc.edu ham apps directory <ftp://sunsite.unc.edu/pub/Linux/apps/ham/convers-941122.tar.gz>. The home of the software is at insu1.etec.uni-karlsruhe.de ftp server <ftp://insu1.etec.uni-karlsruhe.de/pub/hamradio/convers/convers>

Licensing/Copyright etc.
Presumably copyright Fred Baumgarten (not specifically stated), but some portions appear to be free for non-commercial use and copying provided the copyright notices stay intact.

5.12. AX.25 digipeater for Linux

Name
axdigi

Author
Craig Small vk2xlz <csmall@acacia.itd.uts.edu.au>

Description
Allows Linux to digipeat across different ax.25 ports

Status
Beta release

System requirements
Requires Alan Cox AX.25 kernel support

Detail.
Allows frames to come in one port and out another using normal ax.25 digipeater methods. Changes the digipeater callsign to the correct one for the correct return port.

Where and How to obtain it.
sunsite.unc.edu
<ftp://sunsite.unc.edu/pub/Linux/apps/ham/axdigi.tgz>
ftp.ucsd.edu
<ftp://ftp.ucsd.edu/hamradio/packet/tcpip/linux/axdigi.tgz>

Licensing/Copyright etc.
GNU GPL

Contributed by:
Craig Small vk2xlz <csmall@acacia.itd.uts.edu.au>

5.13. Gracilis PacketTwin kernel driver

Name
Gracilis PacketTwin kernel driver

Author
Craig Small vk2xlz <csmall@acacia.itd.uts.edu.au>

Description
Device driver for Gracilis PackeTwin cards.

Status
Alpha test - needs some more work before it is properly
released.

System requirements.
Gracilis PackeTwin card, Alan Cox's AX.25 kernel software.

Detail.
Provides kernel based driver support for the Gracilis PackeTwin
card using the kernel AX.25 code.

Where and How to obtain it.
Currently available only by email from the author.

Licensing/Copyright etc.
Restricted use by alpha testers only, general GPL release is
some months off.

Contributed by:
Craig Small vk2xlz <csmall@acacia.itd.uts.edu.au>

5.14. RSPF Daemon

Name
RSPF - Radio Shortest Path First routing daemon for Linux

Author
Craig Small vk2xlz <csmall@acacia.itd.uts.edu.au>

Description
An implementation of the Radio Shortest path First routing
protocol for linux. The daemon supports version 2.2 of the
protocol which corrects a lot of bugs and problems that were
present in version 2.1.

Status
Alpha test - running. Current version is 0.03

System requirements.
Requires Alan Cox's kernel based AX.25 code.

Detail
This program will allow Linux to become an RSPF router. It hopefully addresses some of the quirks of RSPF v2.1, the version in NOS. It will also allow remote/local queries via a tcp session.

Where and How to obtain it.
Alpha versions are available from sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/apps/ham/>, ftp.ucsd.edu <ftp://ftp.ucsd.edu/hamradio/packet/tcpip/incoming/> or from the author.

Licensing/Copyright
Will be covered by the GPL when formally released.

Contributed by:
Craig Small vk2xlz <csmall@acacia.itd.uts.edu.au>

5.15. Z8530 SCC driver.

Name
generic Z8530 SCC device driver.

Author
Joerg Reuter, <DL1BKE@melaten.ihf.rwth-aachen.de>

Description
A device driver to allow you to use a range of 8530 based SCC cards under Linux.

Status
stable

System requirements.
a modern Linux kernel

Detail
The Zilog Z8530 SCC provides Synchronous/Asynchronous, HDLC, NRZI encoding and other capabilities. There are a number of peripheral cards that use the Z850 as the basis of their design. The driver is generic enough to be pushed into service for just about any sort of 8530 card. The README file that comes with the package provides detail on installation and configuration.

Where and How to obtain it:
The driver can be obtained from: ftp.ucsd.edu <ftp://ftp.ucsd.edu/hamradio/packet/tcpip/incoming/z8530drv-1.8.dl1bke.tar.gz> for kernel versions older than 1.3.*. Kernel version 1.3.* supports the driver in the standard distribution.

Licensing/Copyright
Gnu Public License.

6. Morse Code

Software for use in conjunction with, or for facilitating Morse communication.

6.1. GW4PTS Morse trainer.

Author
Alan Cox, GW4PTS, iialan@iifeak.swan.ac.uk

Description
A Morse Code trainer that uses the PC internal speaker

Status
stable, works quite well, unfinished.

System requirements
Linux, any version

Detail
Alan wrote this small program in only an hour. It is quite neat, and allows you to play morse at a range of speeds and frequencies through the PC internal speaker. You can specify the text to be played either from the command line, from a file, or the program is capable of generating random character groups. As it stands you must invoke the program from a Linux Virtual Console, as it relies on certain kernel calls to produce the sound, and these don't work as easily from an XTerm. As it sounds each character it lists the character in verbal form (Di, Dit, Dah etc.) to the screen. Alan is hoping that someone will take the code and enhance it with the features he has listed in the comments at the head of the source file.

Where and How to obtain it.
I've had a large number of responses from people seeking this code, so I've obtained Alan's permission to make it available. You can obtain it from sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/apps/ham/GW4PTS.morse.tar.gz>.

Copyright/Licensing
GNU Public License 2, freely redistributable, no warranty.

6.2. morse (aka superiormorse)

Author
Joe Dellinger, Hawaii Institute of Geophysics, University of Hawaii at Manoa, joe@sep.stanford.edu, jdellinger@trc.amoco.com, joe@soest.hawaii.edu

Description
A morse-code practice program for UNIX workstations.

Status
Quite stable

System Requirements
Currently supports X11, Sun4, HP, Indigo, and Linux

Detail
Lots of features and options. Includes a utility for generating
random content QSOs, similar to those used in the FCC exams.

Where and How to obtain it:
morse can be obtained from: sepftp.standford.edu
<ftp://sepftp.stanford.edu/pub/UNIX_utils/morse/morse.tar.gz>.

Licensing/Copyright
Freely Redistributable

Contributed by:
Brian Suggs, AC6GV, and John Gotts, jgotts@engin.umich.edu

7. AMTOR Software.

Software for use in conjunction with, or for facilitating AMTOR.

8. PACTOR Software.

Software for use in conjunction with, or for facilitating PACTOR.

9. Slow Scan Television Software.

Software for use in conjunction with, or for facilitating Slow Scan
Television.

10. Facsimile Software.

Software for use in conjunction with, or for facilitating Facsimile.

11. Design and Construction Software.

Software to assist in the design and construction of amateur radio
related things. Antenna, Circuit Board, Filter, and QSL card design
packages are all good candidates for this section.

11.1. Software Oscilloscope

Author
Jeff Tranter, Jeff_Tranter@Mitel.COM

Description
Scope is a simple software emulation of an oscilloscope. It
graphically displays voltage as a function of time.

Status
ALPHA. First release.

System requirements
Sound card with input capability supported by the kernel sound
driver. SVGALIB is used to do the display work.

Detail
Scope uses the /dev/dsp device to take audio in from the
soundcard and displays it on the screen in a manner similar to
an oscilloscope. Jeff claims Scope was written more for

amusement value than for any serious purpose.

Where and How to obtain it.
You can obtain source, makefile and man page for Scope from:
sunsite.unc.edu
<ftp://sunsite.unc.edu/pub/Linux/apps/circuits/scope-0.1.tar.gz>

Licensing/Copyright
GNU Public License, Freely redistributable, No warranty.

11.2. Printed Circuit Board design tool.

Author
Thomas Nau, <Thomas.Nau@rz.uni-ulm.de>

Description
An X11 based interactive printed circuit board design tool.

Status
Vers 1.3, stable.

System requirements
X11 Windowing system and a recent flex program.

Detail
The pcb package comes with good instructions on how to compile
and install the software. I compiled it without error under
X11R6. It comes with package layouts for a range of popular
components and the example layout nicely demonstrates the
capabilities of the package.

Where and How to obtain it.
You can obtain the pcb package from: sunsite.unc.edu
<ftp://sunsite.unc.edu/pub/Linux/apps/circuits/pcb-1.3.tar.gz>
or from: ftp.medizin.uni-ulm.de <ftp://ftp.medizin.uni-
ulm.de/pub/pcb-1.3/pcb-1.3.tar.gz>

Licensing/Copyright
GNU Public License

11.3. Chipmunk circuit design and simulation tool

Author
Dave Gillespie <daveg@synaptics.com> and John Lazzaro
<lazzaro@cs.berkeley.edu>

Description
Schematic Entry and Digital or Analog Simulation.

Status
vers 5.10, stable.

System requirements
X11 windowing system and older (XFree86-2.x) libs, 8 bpp (256
color) only

Detail
I haven't tried this one out yet.

Where and How to obtain it.
You can obtain the Chipmunk package from: sunsite.unc.edu
<ftp://sunsite.unc.edu/pub/Linux/apps/circuits>or ifi.uio.no
<ftp://ifi.uio.no/pub/>.

Licensing/Copyright
Modified GNU Public License, Caltch specifically disclaimed from
liability.

11.4. irsim

Author
Dmitry Teytelman, dim@leland.stanford.edu

Description
An event-driven logic-level simulator for MOS circuits

Status
Version 9.2, production.

System Requirements
X-Windows.

Detail
irsim is an X11 based simulator for MOS circuits. It has two
simulation modes, either switch where each transistor is
modelled as a voltage controlled switch, or linear where each
transistor is modelled as a resistor in series with a voltage
controlled switch, and each node has a capacitance.

Where and How to obtain it.
You can obtain irsim from: sunsite.unc.edu
<ftp://sunsite.unc.edu/pub/Linux/apps/circuits/irsim-9.2.linux.1.tar.gz>.

Licensing/Copyright
Freely Redistributable

11.5. Spice vers. 3f4

Author
University of California, Berkeley, ported by Jeff@EE.Ryerson.Ca

Description
Spice is an analog circuit emulator.

Status
Stable release.

System requirements
Unknown.

Detail
Spice allows you to design and test circuits in a computer

modelled environment to see how they will behave without having to touch a soldering iron, or solder. A readme file comes with the package. To install I did the following:

```
# cd /usr/src
# gzip -dc spice3f4.tar.gz | tar xvf -
# cd spice3f4
# ./utils/build linux
# ./utils/build linux install
```

Where and How to obtain it.
You can obtain version 3f4 of Spice from: sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/apps/circuits/spice3f4.tar.gz>

Licensing/Copyright
Copyright held by University California, Berkeley. Freely redistributable provided you are not unfriendly to the U.S.

11.6. svgafft - Spectrum analyser

Author
Andrew Veliath, drewvel@ayrton.eideti.com

Description
svgafft is a spectrum analyser for Linux.

Status
Alpha software, but usable.

System requirements
Linux supported sound card, svgalib, a 486DX33 or better.

Detail
svgafft uses the /dev/dsp device and currently supports 16-bit and 8-bit sample resolution on supported Linux soundcards. It's display is something akin to a high-end spectrum analyzer with falling peaks.

Where and How to obtain it:
Look for svgafft-0.2.tar.gz on sunsite.unc.edu

Licensing/Copyright
Unknown, check any README supplied.

11.7. Audio Spectrum Analyser

Author
Philip VanBaren, phillipv@eecs.umich.edu

Description
An audio spectrum analyser for Linux SVGALIB or X-Windows.

Status
Alpha but usable

System requirements
Linux supported sound card, svgalib or X-Windows.

Detail
freq5a1 uses the /dev/dsp device, samples the incoming audio,
performs a fast fourier transform on the data and displays the
output in either 640x480 VGA or an X-Window.

Where and How to obtain it:
You can obtain freq5a1.tar.gz from: umich.edu
<http://bul.eecs.umich.edu/~phillipv/signal>, sunsite.unc.edu
<ftp://sunsite.unc.edu/pub/Linux/apps/sound/freq5a1.tar.gz> or
by mail from the author.

Licensing/Copyright
GNU Public License vers 2.0.

12. Training/Educational Software.

Software to assist in education or training for amateur radio. Morse
Code tutorials, technical examination database, Computer Based
Training software, and the like are listed here.

13. Miscellaneous Software.

Software that didn't neatly fit into any other category.

13.1. Linux for HAMS CD-ROM

Author
Bruce Perens, bruce@pixar.com

Description
A complete linux distribution on CDROM specifically designed for
Amateur Radio operators.

Status
Not yet available.

System requirements.
Linux compatible hardware, some software will obviously require
specialised hardware to operate. No additional software should
be required.
Detail
A complete Linux distribution specifically catering for Amateur
Radio operators. It will include a fully featured Linux
installationplus a range of amateur radio specific software such
as those listed in this document. Bruce has detail and updated
status report available at the LinuxForHams WWW page
<http://www.rahul.net/perens/LinuxForHams>.

Where and how to obtain it:
It isn't yet available, details will be made available when it
is released.

Licensing/Copyright
GNU Public License.

Contributed by:
Bruce Perens, bruce@pixar.com

13.2. SunClock

Author
John Mackin, john@cs.su.oz.AU

Description
A clock that will show you instantly what parts of the globe are exposed by sunlight and what parts aren't.

Status
Released.

System requirements.
X-Windows.

Detail
sunclock is another of those desktop gadgets that most people think look nice but really don't have a lot of use for. I use sunclock to obtain an at-a-glance indication of the time anywhere in the world. In its iconic form it sits in a small Mercator projection. When maximised it produces the same image but obviously larger with slightly more detail. It also displays the date, local time and UTC. sunclock actually calculates mathematically what parts of globe are sunlit and which aren't, it seems quite accurate, so long as you assume the earth has no atmosphere.

Where and How to obtain it.
I haven't seen any precompiled sunclock binaries for Linux about, so check your nearest archie server. sunclock compiled straight out of the box for me.

the top of sunclock.c remain intact.

13.3. Xearth

Author
Kirk Lauritz Johnson, tuna@cag.lcs.mit.edu, modified by Dimitris
Evmorfopoulos, devmorfo@cs.mtu.edu.

Description
A rotating earth for X-windows root window. It has real life
shading, and options for geostatic view, and non geostatic view.
A prettier and more modern version of sunclock but requires a
bit more processing power.

Status
released, stable.

System requirements.
X-Windows.

Detail
xearth is much like sunclock except that it draws a view of the
earth onto your root map in blue and green, as the earth would
be viewed from space. You have a number of options in
determining the behaviour of the view. You can either have it so
that the same part of the earth is displayed, and the sun
rotates, so you'll have varying light and shadow on the display,
or you can have it shown as if you were travelling with the sun,
so the whole of the globe is visible, and the earth rotates.
You can specify the latitude/longtitude that will be the centre
of the display. xearth is also capable of producing gif and ppm
```

graphics output, so you can generate custom graphics of the globe. When run as your root map, you can adjust the interval of time between updates. On my 486sx25 you notice a small degradation in performance when it is recalculating, but it's not annoying.

Where and How to obtain it.
A precompiled xearth binary is available from: sunsite.unc.edu, or the source can be obtained from just about any X11/contrib directory. Try export.lcs.mit.edu if you can't find it elsewhere.

Licensing/Copyright
Copyright (C) 1989, 1990, 1993 by Kirk Lauritz Johnson. The copyright notice included states that xearth is freely redistributable so long as the copyright notice is left intact, and be included in documentation.

Alan Cox, GW4PTS.

14. Installation, Configuration, Hints and Tricks.

This section provides some detail on how to actually install and use some of the listed software. It will also detail some solutions to some tricky problems that you might encounter with the software.

14.1. AX.25 - Packet Radio protocol kernel software.

The AX.25 protocol offers both connected and connectionless modes of operation, and is used either by itself for point-point links, or to carry other protocols such as tcp/ip and netrom.

It is similar to X.25 level 2 in structure, with some extensions to make it more useful in the amateur radio environment.

Alan Cox has developed some kernel based AX.25 software support for Linux and these are available in ALPHA form for you to try. Alan's code supports KISS based TNC's (Terminal Node Controllers), the Ottawa PI card and the Z8530 SCC driver.

The User programs contain a P.M.S. (Personal Message System), a beacon facility, a line mode connect program, `listen' an example of how to capture all AX.25 frames at raw interface level and programs to configure the NetRom protocol.

Be sure to read /usr/local/ax25/README as it contains more complete information regarding this software.

14.1.1. Where to obtain the AX.25 software.

The AX.25 software is comprised of two component, the kernel source and the utility programs. As of the version 1.3.* release of Linux kernel source the AX.25, Netrom, Z8530 SCC and PI card drivers are all

included as a standard. I strongly recommend you obtain and use the version 1.3.* kernel source. Be warned though, this software is alpha and may have problem that you wouldn't otherwise encounter.

You can obtain the latest kernel source from:

ftp.funet.fi

/pub/OS/Linux/PEOPLE/Linus/v1.3/

You will also need the utility programs. The latest version of those can be found at:

ftp.ucsd.edu

/hamradio/packet/tcpip/incoming/ax25-utils-030.tar.gz
.../ax25-utils-030-patch1.gz

14.1.2. Installing the AX.25 software.

The software comes in two parts, the kernel source, and the user programs.

14.1.2.1. The kernel source.

If you are using the 1.3.* kernel source then all you have to do is build the kernel as you would normally.

The following should be safe:

```
# cd /usr/src/linux
# make config
# make dep;make
```

Be sure to answer `yes' when you are asked if you should include the AX.25 support in the make config step. You will also need to answer `y' to including SLIP if you want the AX.25 code to support a KISS TNC or if you intend running a version of NOS on your system so you can link the two. You will be asked if you wish to include the Z8530 driver. If you wish to support the Ottawa PI driver then you must answer `y' when asked: Do you want to be offered ALPHA test drivers ? and: Other ISA cards ? then `y' when prompted: Ottawa PI and PI/2 support.

14.1.2.2. The user programs.

To install the user programs you should try:

```
# cd /usr/local
# gzip -dc ax25-utils-030.tar.gz | tar xvvof -
# gzip -dc ax25-utils-030-patch1.gz | patch -p0
# cd ax25
```

You should then read the README file and follow its instructions. When you are happy you are ready to compile, then do:

```
# cd /usr/local/ax25/src
# make clean
# make install
```

14.1.3. Configuring and using the AX.25 software.

Configuring an AX.25 port is very similar to configuring a slip device. The AX.25 software has been designed to work with a TNC in kiss mode or an Ottawa PI2 card. You will need to have the TNC preconfigured and connected to your serial port. You can use a comms program like minicom or seyon to configure the TNC into kiss mode if you wish.

You use the axattach program in much the same way as you would use the slattach program. For example:

```
# /usr/local/ax25/bin/axattach -s 4800 /dev/cua1 VK2KTJ &
```

would configure your /dev/cua1 serial device to be a kiss interface at 4800 bps, with the hardware address VK2KTJ.

You would then use the ifconfig program to configure the ip address and netmask as for an ethernet device:

```
# /sbin/ifconfig sl0 44.136.8.5
# /sbin/ifconfig sl0 netmask 255.255.255.0
# /sbin/ifconfig sl0 broadcast 44.136.8.255
# /sbin/ifconfig sl0 arp mtu 257 up
```

To test it out, try the following:

```
/usr/local/ax25/bin/call VK2DAY via VK2RVT
```

The call program is a linemode terminal program for making ax.25 calls. It recognises lines that start with ` ' as command lines. The ` .' command will close the connection.

You also need to configure some items such as the window to use. This necessitates editing only one file. Edit the /usr/local/ax25/etc/ports file. This is an ascii file containing one line for each AX.25 port. You must have the entries in this file in the same order as you configure your AX.25 interfaces.

The format is as follows:

```
callsign baudrate window frequency
```

At this stage not much of this information is used, it will be picked up and used in later developments.

Please refer to the man pages in /usr/local/ax25/man and the README file in /usr/local/ax25 for more information.

14.2. Ottawa PI/PI2 card driver.

The Ottawa PI card is a Z8530 SCC based card for IBM PC type machines that is in common usage by Amateur Radio operators worldwide. While it

is most commonly used by Amateur Radio Operators, it could be pressed into service in other fields where it is desirable to have the features of a Z8530. It supports a high speed half duplex (single DMA channel) port, and a low speed (<9k6bps interrupt driven) half duplex port. The PI2 is a new version of the card that supports an on board radio modem, and improved hardware design.

A driver for this card has been written by David Perry, <dp@hydra.carleton.edu>, and is available from in the standard linux kernel. Please refer to the AX.25 section for configuration details.

14.3. HOWTO link NOS and the Linux kernel networking software

Many people like to run some version of NOS under Linux because it has all of the features and facilities they are used to. Most of those people would also like to have the NOS running on their machine capable of talking to the Linux kernel so that they can offer some of the linux capabilities to radio users. Brandon S. Allbery, KF8NH, contributed information to explain how to achieve this.

Since both Linux and NOS support the slip protocol it is possible to link the two together by creating a slip link. You could do this by using two serial ports with a loopback cable between them, but this would be slow and costly. Linux provides a feature that many other unix-like operating systems provide called `pipes'. These are special pseudo devices that look like a standard tty device to software but in fact loopback to another pipe device. To use these pipes the first program must open the master end of the pipe, and the open then the second program can open the slave end of the pipe. When both ends are open the programs can communicate with each other simply by writing characters to the pipes in the way they would if they were terminal devices.

To use this feature to connect the Linux Kernel and a copy of NOS, or some other program you first must chosoe a pipe device to use. You can find one by looking in your /dev directory. The master end of the pipes are named: ptyp[1-f] and the slave end of the pipes are known as: ttyp[1-f]. Remember they come in pairs, so if you select /dev/ptypf as your master end then you must use /dev/ttypf as the slave end.

Once you have chosen a pipe device pair to use you should allocate the master end to you linux kernel and the slave end to the NOS program, as the Linux kernel starts first and the master end of the pipe must be opened first. You must also remember that your Linux kernel must have a different IP address to your NOS, so you will need to allocate a unique address for it if you haven't already.

You configure the pipe just as if it were a serial device, so to create the slip link from your linux kernel you can use commands similar to the following:

```
# /sbin/slattach -s 38400 -p slip /dev/ptypf &
# /sbin/ifconfig sl0 broadcast 44.255.255.255 pointopoint 44.70.248.67 /
mtu 1536 44.70.4.88
# /sbin/route add 44.70.248.67 sl0
# /sbin/route add -net 44.0.0.0 gw 44.70.248.67
```

In this example the Linux kernel has been given IP address 44.70.4.88 and the NOS program is using IP address 44.70.248.67. The route command in the last line simply tells your linux kernel to route all datagrams for the amprnet via the slip link created by the slattach command. Normally you would put these commands into your /etc/rc.d/rc.inet2 file after all your other network configuration is complete so that the slip link is created automatically when you reboot. Note: there is no advantage in using cslip instead of slip as it actually reduces performance because the link is only a virtual one and occurs fast enough that having to compress the headers first takes longer than transmitting the uncompressed datagram.

To configure the NOS end of the link you could try the following:

```
# you can call the interface anything you want; I use "linux" for convenience.
attach asy ttypf - slip linux 1024 1024 38400
route addprivate 44.70.4.88 linux
```

These commands will create a slip port named `linux' via the slave end of the pipe device pair to your linux kernel, and a route to it to make it work. When you have started NOS you should be able to ping and telnet to your NOS from your Linux machine and vice versa. If not, double check that you have made no mistakes especially that you have the addresses configured properly and have the pipe devices around the right way.

15. How to contribute or update an entry.

I'd like for this list to be as complete and up-to-date as possible. So I'm keen to hear about any developments or products that I don't already know about, or that the entry is obselete or outdated for.

What I'd like as a minimum set of requirement would be something like the following:

Name
The name of the software in question.

Author
Who wrote, or ported the software. An email address, or some other means of contacting them is also essential.

Description
A single line description of what the software does.

Status
An indication of the software's status. Is it still in testing? Is it a production release? Is it still in the design stage?

System requirements
What does the software require to run? Does it require X-Windows? Does it need a soundcard? Does it need a certain version of kernel? Does it need other software to support it?

Detail
I'm not keen on including a large amount of detail on each piece of software as this would consume a lot of time reading and trying to keep up to date. So instead what I'd like to list is what makes this software unique, anything special about it. Perhaps its most outstanding features, that sort of thing.

Where and How to obtain it.
If the software is freely distributable then ftp details would be great. If it is commercial software then the name of the company distributing the software, and an address or telephone number. If it is available only by some other means, say mail order, then details on where and how to obtain it.

Licensing/Copyright
Is the software Copyleft? Copyright? Shareware? Public Domain? Restricted in use in any way?

Don't worry if you don't know all of these details, just send me what you do know and I'll list what I can. I'd rather have an incomplete listing than no listing at all.

Please mail any contributions to:

terryd@extro.ucc.su.oz.au or terry@orac.dn.itg.telecom.com.au

I'd list a packet radio address too but I'm still not properly operational again yet after moving house.

16. Discussion relating to Amateur Radio and Linux.

There are various places that discussion relating to Amateur Radio and Linux take place. They take place in the comp.os.linux.* newsgroups, they also take place on the HAMS list on niksula.hut.fi. Other places where they are held include the tcp-group mailing list at ucsd.edu (the home of amateur radio tcp/ip discussions), and I believe there is an `IRC' channel that sometimes is used to discuss them as well.

To join the Linux HAMS channel on the mail list server, send mail to:

linux-activists@niksula.hut.fi

with the line:

X-Mn-Admin: join HAMS

at the top of the message body (not the subject line).

To join the tcp-group send mail to:

listserver@ucsd.edu

with the line:

subscribe tcp-group

in the body of the text.

Note: Please remember that the tcp-group is primarily for discussion
of the use of advanced protocols, of which tcp/ip is one, in Amateur
Radio. Linux specific questions should not ordinarily go there.

>How can a $10.00 12oz item cast $.95 to ship? Impossible!

When I was selling mail order it was costing me money for
shipping boxes (and they are not cheap) packing, and labels.

Moreover, the manpower to pack/label/ship cost money, and then
there are the losses for C.O.D. packages that are returned.
All that has to come out somewhere. The seller isn't going to
lose money to do business with its customers. So the solution
is to itemize the bill: the product is one price, and you are more
then welcomed to come pick it up or pay the shipping and handling
cost.

The bottom line is to get bottom line price on the deal when comparing
deals. I once told a mail order place to ship to me via US Mail because
it was cheaper then the UPS....They shipped to me UPS anyways but
didn't charge me for the shipping.

So there you have it folks.

>systems.
>

Number 5 is the key. The last few times I flew, I checked the seat pocket for information. It seems to vary by airline. For example, there has been a lot of pressure from business travellers to allow laptop use in flight, so those and video games were specifically allowed (on this particular airline), but only during the "cruise" phase of the flight. They had to be off and stowed during takeoff and approach.

I had a co-worker who was told he could use his laptop, but not his mouse (it was a normal, corded, mouse, not an integrated pointing device).

Of course, if you want to listen to the radio, you could use a tuned-RF receiver. Without a local oscillator, you wouldn't be able to interfere :-)

Expensive ("but I'm worth it"). I've had a 528 2m/44 hand held for 3+ years. With the exception of having the external power jack replaced twice at 9 month intervals (under warranty BOTH times) it's been rode hard and put away wet. Still works well. Solved the problem of the external power connection by buying the external power adapter the plugs on to the battery connector from another model HH.

Getting ready to buy the dual band mobile. Just had to save a little extra.

Jl> Does anyone have or know where I can get a program which works to
Jl> unzip these?

Jl> Thanks,

Jl> Jim
Jl> KD4IHG

Jim, it may depend on what version of PKUNZIP you are using. If the
archive was packed with a recent version of PKZIP and you are using an
older version of PKUNZIP, there may be some problems. I have run into that
at times here, also, until I upgraded my programs.
Just a suggestion...

If PKUNZIP won't unpack it, there may also be something wrong with the
archive... You might try getting the file from another location.

: Morse (20-30 wpm) is negligible. Morse proficient hams do indeed
: exchange thoughts and ideas quite well. Morse is only "tedious" if
: the operator is not proficient...or if one is clunking along at 10 wpm.
: Your stereotypic description of Morse being of no use except for
: "simple stylized gaming contacts" shows an apparent ignorance of
: actual Morse operation...and it's about as valid as someone saying
: that all packet is good for is attracting crickets.

Yes, but other peoples packets can fit in between the ones the sender
is sending slowly. This way packet can approach total usage of the channel.
Morse code requires that you wait until the sender is finished with his/her
transmission.

: Most of the words uttered on voice modes are superfluous. The same
: thoughts and ideas can distilled down and sent efficiently with Morse
: (or digital modes). Much of what you hear on voice is the result of
: people's brains not being able to keep up with their mouths. Morse
: gives you time to think of things worth saying. :-)

That's the same as voice mail not being as effecient as email. You
have to compose and edit in real time with voice. Other modes of communication
don't need as much bandwidth to convey the same idea, since we have time
correctly formulate the message.

DE>Kenwood service absolutely stinks. I dare you to call them up and
DE>get a timely HUMAN voice and a RETURN OF A PHONE CALL WITHIN THREE
DE>DAYS for a technical question.

i must agree with you on kenwood service. shitty.

DE>Now, my question to all of you: Is Ten Tec or Icom (US stuff) any
DE>better??? I also have found Yaesu to stink..

i don't know about icom (my H16 and marine handhelds have never had any
problems to speak of). as far as yaesu goes, i have had nothing but
excellent tech support from them. i had one tech on the phone with me
for just under an hour until he had helped me solve a problem. he
didn't get frustrated with me, and occasionally cracked a joke or two to
ease the tension. he may be a rarity, but i have always received
curteous service from all the yaesu crew. they're also more than
willing to ship you small replacement items (one at time :)) for
free, such as new rubber keypads / covers, belt clips, flexible
antennas, you name it.

DE>I'm their profit, and they're the overhead...I really don't think
DE>they understand how pissed off I am!

sorry to hear you had such a bad experience with these companies. i
have heard complaints about kenwood service, and reviews i get about
icom's service rate it as at least "fair".

Don't know if the Amateur dealers are doing this, but other companies sure are. A few years ago I ordered some non-Ham parts from a company several states away. What arrived was not what I had ordered, and the items I wanted were not in stock. The company refused to offer a refund, but I had paid over the phone with a credit card so I shipped the items back, then called the card company for a credit.

What I didn't know was that when card companies issue a credit on returned merchandise, they are obligated to do so for everything except shipping charges. Because of this, I ended up in an argument with the credit card folks concerning the difference between shipping charges, and "shipping and handling". The vendor was claiming that shipping/handling charges should not be refunded, and their invoice showed this item at about $30.00. However, the carrier's tag on the carton showed actual shipping charges to be about $7.00. To make this short, I won the argument and received the credit, but only because I had proof of the actual shipping charges.

The moral is, "shipping and handling" can be practically any amount the seller wants it to be. It may be a long ways from actual shipping charges, and this is a good thing to remember if there's a dispute later. Even if the merchant won't refund handling charges, the credit card company will.

There's also something to be said for having UPS (or your favorite carrier) pick up the shipment on *your* behalf instead of the seller's. That way, you pay shipping directly to the carrier and the exact amount is never in dispute.

** Weekly Posting **

The QRZ Callsign/Email Registry Now contains over 4100 callsign to
email address listings and ig growing daily.

We have a WWW page where you can input your e-mail address directly
into the QRZ Callsign Database, where it will be published on both
CDROM and on the internet. When you use this page, your email-address
is made instantly available to the online database.

Everyone is encouraged to check in and add their e-mail address to the
server. There are no charges or listing fees, and it's free to all
radio amateurs. The procedure takes only a second, and you are only
asked to supply your callsign and e-mail address.

The URL is:

http://www.qrz.com/email.html

If you don't have WWW access, send an email to updates@qrz.com
with the one-line message:

qrz-email YourCallsign YourEmailAddress

E-mail submissions will be sent an automated reply.

Register your e-mail address today!

>accept that as a reasonable answer!

I really don't understand the basis of this argument. The houses you want to buy are private property. They don't belong to you. Why would you ever think you have the right to tell the seller what conditions he should be allowed to place on the sale? The solution is no different than if you lived somewhere that had no jobs - find a different place to live.

>Yeah..and CC&Rs as to what type of front door you have, and what
>style roof you have, etc. Tell these dweebs to get a life and start
>worrying about their own affairs, not mine!

It is exactly their own affairs that they *are* worrying about. If you don't want to agree to the restrictions, the sellers are perfectly happy to see you walk away. You, on the other hand, are implying that they should be forced to sell regardless of your intent, and without regard for their own well-being. The fact that you don't agree with them as to the effect of your antennas on their welfare is entirely irrelevant to the principles involved.

>Uh..wait a minute here. What if he didn't know about the
>restrictions.
>
>You are ignoring that full disclosure isn't required in all 50
states!

Full disclosure is a convenience, not a substitute for the buyer's need to be aware. Unless you want to live in a totally socialist state, it must be the buyer's responsibility to investigate the merits of the purchase. The seller only has to be honost in whatever representations he chooses to make regarding the property. Given that the covenants are a matter of public record, it is difficult to imagine how the seller could defraud a buyer in this regard.

>Yep, and protection of a minorities rights. (Igoring the fact that
>I don't have a right to put up a tower from a federal point of view.)

The issue has nothing to do with minority rights. It has to do with the rights of the seller to attach whatever conditions he wishes to the sale, be it price, time of closing, condition of the property, or

restrictive covenants.

>What about the right to live in a place that I can afford, and
>raise my family.

You have no such right - you only have the right to purchase
property that a seller agrees to sell.

>The point is that there are deceptive selling practices going on in
>many places, and there is also a huge busy-body factor that just
>isn't right!

The busy-body factor can't bother you unless you voluntarily agree to
the covenants proposed by the seller. On the other hand, if you try
to force the seller by law to agree to your terms instead, then *you*
will have destroyed the concept of private property in a way much
worse than any covenant could ever do.

We're pleased to announce that you can now lookup callsigns
via e-mail. To lookup any callsign in the QRZ database,
send a message to:

lookup@qrz.com

Your message may contain one or more lines which contain the
word 'lookup' followed by a callsign to look for.

Example:

lookup aa7bq
lookup w1aw

Please feel free to give it a try and pass the info on to
your friends.

>will have to listen and call in many directions to get in touch
>when the band is poor (no tropospheric ducting, etc) When it is
>good it will surprise you!
>Gerry K8EF
>
>
>

One of my first 2m SSB QSOs was with South Dakota (EN14 > EN50) with 5 watts and an indoor 5-el Yagi.

I've recently made a few QSOs with the East Coast on 6 meters with 250 mW and an indoor dipole.

When these bands are open, they are OPEN!

GO FOR IT!

From: horrock@aol.com
Message-ID: <40c4j9$nej@newsbf02.news.aol.com>
Source record: 240757

Greetings,
I am looking for anyone who may have served some of their Naval service time at Damneck, VA and used the Ham/MARS radio station there?

I was there in 1977 and 1980-1982. The last I heard, CMD Peters retired, and the old Ham/MARS Shack was bulldozed to have a new BEQ built on it. There were plans to open up a new shack, but I have not heard from anyone who can confirm that a new shack was ever opened.

Regards,
Thomas Nofsinger

If you're only after the knowledge, then why are you trying to build one?
Building a transmitter isn't very difficult, and the knowledge is readily
available if you know where to look. Besides, I think you want
alt.pirate.radio, not rec.radio.amateur.misc. Most of the people on this
list go through the trouble of LEARNING what radio is all about, becoming
LICENSED and then operating LEGALLY.

>

> Gary Coffman KE4ZV

Another aspect often overlooked is adequate bonding straps between concrete rebar, the tower and adjacent traditional grounding systems. Rain wet concrete has resistivities of approx. 1000 ohms-meter. A typical Rohn 25 tower installation requires a 2'x 2'x 4' reinforced concrete base; tower bolts need to be bonded to the rebar to minimize the potential direct strike arc across 10cm or so of concrete to get to unbonded rebar. The I^2R heat generated by this possible strike dissipation path may be part of the "exploding concrete myth" generating process. Do all strikes take this path? No, but I want to minimize this strike path as much as possible.

This is the essence of the Ufer grounding system....bond everything, including concrete reinforcing bar into the system ground. I've seen large 250' freestanding cellular towers where the base concrete measures 10'x10'x30'. The rebar becomes a critical part of this system ground; very low inductance

impedance paths (multipoint ground reference points) from the rebar to the system ground is essential.

I thought it was PolyPhaser who recommended multiple ground rods around the tower foundation, well bonded to each leg of the tower, and avoidance of rebar sticking through the foundation into the ground. At least those are the standard practices I've read.

2599. Re: DXCC Reforms in Year 2000??

Newsgroup: rec.radio.amateur.misc
Date: 1995-08-10 00:00:00 UTC
From: Steve Ford <sford@arrl.org>
Message-ID: <40d04h$ih6@mgate.arrl.org>
Source record: 240770

The following is the complete statement from ARRL
President Ron Stafford, KB6ZV.

August 3, 1995
To All DXCC Participants:

The ARRL DX Century Club program was the subject of considerable discussion before and during the July 21-22 meeting of the ARRL Board of Directors. The purpose of this letter is to describe the actions taken, and in some cases not taken, and what happens next.

The Membership Services Committee (MSC) is the standing committee of the Board that is responsible for performing studies and making recommendations to the Board regarding membership awards, including the DXCC program. The members of the MSC are Directors Fried Heyn, WA6WZO (chairman), Lew Gordon, K4VX, Steve Mendelsohn, WA2DHF, Joel Harrison, WB5IGF, and Mary Lou Brown, NM7N; Vice President Jay Holladay, W6EJJ; and Vice Director Warren Rothberg, WB1HBB. The MSC met on Wednesday evening, July 19, with all other ARRL directors and several other officers, vice directors, and staff also present. Thus, while the decisions taken at this meeting were not formal decisions of the ARRL Board, it is fair to say that they reflected the sense of the Board.

The ARRL DX Advisory Committee is a group of volunteers, appointed on a division basis by each ARRL Director and with a Canadian representative appointed by the president of the Radio Amateurs of Canada, to advise the Board and staff on matters relating to its specialty. Leading up to the meeting, recent DXAC decisions on close votes concerning two applications for DXCC country status were the focus of considerable discussion.

The DXAC had voted, 8 to 7, against the addition of Pratas Island to the DXCC list. During and after the vote, information that might conceivably have changed the outcome of this very close vote had been received by the DXAC members. An internal rule of the DXAC prevents reconsideration of DXAC decisions until two years have elapsed, unless waived by the DXAC chairman. In general, this is a useful rule which saves time that otherwise would be devoted to considering repetitious applications. However, in this particular case it was the sense of the Board that in light of the clarifying information that had been received regarding Pratas Island since the voting process was begun, it wished the DXAC to revisit the matter now. This has been relayed to the DXAC Chairman, Garth Hamilton, VE3HO, by ARRL Membership Services Manager (and chairman of the Awards Committee) Chuck Hutchinson, K8CH, and the DXAC will now take up the matter.

The DXAC had also voted, 9 to 7, against the addition of Scarborough Reef (referred to as "Scarborough Shoal" on US Defense Mapping Agency maps). In reviewing this particular decision on July 19, the MSC and other Board members present discussed the long-standing policy of the ARRL Awards Committee (a committee of ARRL headquarters staff qualified in the areas of DXing and contesting) to not consider applications for DXCC country status until the DXAC had made a favorable recommendation. While the basis for this policy was an ARRL Board instruction dating back to 1976, when the Board had mandated that the DXAC must be consulted before the country status of any new area was determined, the MSC concluded that it was more limiting than the Board had intended and voted to delete the policy from the Awards Committee documentation. The effect of this change is that new country applications will be considered first by the DXAC and then by the Awards Committee, as in the past--but the Awards Committee will now consider those on which the DXAC has made a negative determination as well as those on which the determination was positive. If the two committees agree, that decides the matter. If they disagree, the issue will go to the Board via an appeals procedure.

An appeals procedure has been in place for several years that permitted the chairman of the DXAC or Contest Advisory Committee (CAC) to appeal to the full Board a decision of the Awards Committee that ran contrary to an Advisory Committee recommendation. Following a study that was initiated at Minute 88 of the January 1995 Board Meeting, the MSC decided to recommend to the Board two revisions in this procedure: (1) to eliminate the need for the Advisory Committee chairman to initiate an appeal, making the appeal automatic, and (2) to refer the appeal to the MSC before it goes to the full Board so the Board can have the benefit of an MSC recommendation when it considers the matter. This change was adopted by the Board when it met on July 20.

Also adopted by the Board was a reduction in the size of the ARRL Awards Committee from 8 members and 2 alternates and 6 members and no alternates. This change was made at the request of the chairman of the Awards Committee and on the recommendation of the MSC, and simply serves to streamline Awards Committee operations so they will have less impact on other staff responsibilities.

The Board also instructed the ARRL President to appoint an Ad Hoc Committee to review and recommend revisions to the various documents that govern Advisory Committee procedures. The Ad Hoc Committee is scheduled to deliver its final report to the July 1996 meeting of the Board.

Some Board members had been considering introducing a motion calling for a comprehensive study of the DXCC program, including the possibility of phasing out the existing program and creating a new one effective with the turn of the century. Such a motion was not introduced. Should one be introduced in the future, there will be

ample opportunity for comment by interested members before any decisions are made by the Board. Veteran DXCC participants will recognize that this is not the first time such a possibility has been discussed.

During the week following the Board Meeting, the Awards Committee met and reviewed the Scarborough application. It was the unanimous opinion of the Awards Committee that Scarborough Shoal should be added to the DXCC countries list. As called for in the Awards Committee Standard Operating Procedure, the chairmen of the DXAC and the Awards Committee conferred in an attempt to effect a compromise but were unable to do so. Therefore, the question now goes to the MSC for recommendation to the full Board. The MSC will next meet on August 19.

To recap:

Procedures for considering new country proposals: The procedures have been amended so that both the DXAC and the Awards Committee will consider such proposals. If the committees cannot reach agreement, the matter will go to the full Board via the Membership Services Committee. Advisory Committee procedures also will be the subject of study by a new Ad Hoc Committee.

Pratas Island: The DXAC has been asked to reconsider its earlier negative decision. Once it has done so, the Awards Committee will also take up the matter. If the committees agree, that decides the issue; if not, it will go to the Board via the Membership Services Committee.

Scarborough Shoal: The conflicting decisions of the DXAC and the Awards Committee are being appealed to the ARRL Board via the MSC.

The future of DXCC: No formal proposals for a study have been introduced at this time, no decisions have been, and no decisions will be made without ample opportunity for input from DXCC participants.

I hope this clarifies where things stand. Thank you for your continuing interest in the ARRL DXCC program.

73,

Rodney J. Stafford,KB6ZV
President

: >
: >You say I have a choice as to where I get to live...yep...anything in
: >this town built around 1960 will be what I'm restricted too! I don't
: >accept that as a reasonable answer!

: I really don't understand the basis of this argument. The houses you
: want to buy are private property. They don't belong to you. Why
: would you ever think you have the right to tell the seller what
: conditions he should be allowed to place on the sale? The solution is
: no different than if you lived somewhere that had no jobs - find a
: different place to live.

The answer you propose is rediculous. My arguement isn't related to
a particular house, but rather an entire city! For that matter, the
description I gave can be extended to the entire SF bay region
fairly successfully.

Your answer says that I have to move away from my job to solve my
problem. That is the effect of implementing your answer. My
gripe is that the available property is rediculously limited by
severe CC&R's in most of this region, yet this is the region
I MUST live in because of my particular jobs skills. There isn't
a great deal of choice in this.

Further, the VAST majority of home owners AREN'T the ones who placed
the CC&R's on their own properties, but rather the developers of
the property. The owners of an individual property CAN'T negate
the CC&R's attached to their properties if they choose to either!
So the arguement you make that it is part of the seller's choice
really only applies to the original developer, and not any
subsequent owners...thus the arguement seems to be invalid on
it's face in my mind.

: It is exactly their own affairs that they *are* worrying about. If
: you don't want to agree to the restrictions, the sellers are
: perfectly happy to see you walk away. You, on the other hand, are
: implying that they should be forced to sell regardless of your intent,
: and without regard for their own well-being. The fact that you don't
: agree with them as to the effect of your antennas on their welfare is
: entirely irrelevant to the principles involved.

Again...the sellers (except the original developers) don't really have
any say in this issue.

: >Uh..wait a minute here. What if he didn't know about the
: >restrictions.
: >
: >You are ignoring that full disclosure isn't required in all 50
: states!

: Full disclosure is a convenience, not a substitute for the buyer's
: need to be aware.

It should be a mandatory convenience in my mind. The state I live in
does have such a law. I don't agree with you here...why bother arguing
about it.

: >Yep, and protection of a minorities rights. (Igoring the fact that
: >I don't have a right to put up a tower from a federal point of view.)

: The issue has nothing to do with minority rights. It has to do with
: the rights of the seller to attach whatever conditions he wishes to
: the sale, be it price, time of closing, condition of the property, or
: restrictive covenants.

Again...which seller? Just the original developer seems to have these
rights....your arguement falls on deaf ears here.

: >What about the right to live in a place that I can afford, and
: >raise my family.

: You have no such right - you only have the right to purchase
: property that a seller agrees to sell.

So I don't have a right to pursue happiness? Boulderdash!

: >The point is that there are deceptive selling practices going on in
: >many places, and there is also a huge busy-body factor that just
: >isn't right!

: The busy-body factor can't bother you unless you voluntarily agree to
: the covenants proposed by the seller.

That doesn't make sense. I WON'T agree to the busy-body factor,
thus CC&R's won't let me buy a house anywhere! AND THE CC&R's aren't
propossed by anyone but the original DEVELOPER.

: On the other hand, if you try
: to force the seller by law to agree to your terms instead, then *you*
: will have destroyed the concept of private property in a way much
: worse than any covenant could ever do.

: 73,

: Jack WB3U

Nope. Jack, another simple fact that you ignore is the power that
Home Owners associations have. In CA they have more power than the
federal government AND local municipalities. They can literally
step into my home and dictate how I live my life. I guess you haven't

heard about situations like Home Owner's associations describing where you can't be amorous in you own household as an example. It's happened! I think it is high time that we reconsider the amount of power these little tyrants sitting on HOA boards give themselves!

ATTN: Hams in Central MASS...

Looking for hams in Worcester County who would like to set up a 440MHz to 6M link. I've got the following to contribute:

- Hamtronics REP-100 UHF 50W repeater
- An 800 foot hill just south of Worcester

Repeater & duplexer is presently tuned to 462.625/467.625 MHz with no PL

Hilltop presently has no antenna structures or other transmitters (no intermod!). A building is there to shelter equipment and electricity is available.

Anyone interested in creating such a project, please let me know. We can even add links to other bands if desired (like 1.2 GHz and 10 Ghz) since there is good line of site north and east of this site.

Looking for hams who can contribute other equipment, time, and retune the repeater & duplexer.

As a ham who'll be buying a house sometime soon, I've been following this discussion closely. My wife's a ham too, and shares similar views in regard to CC&Rs.

A question: is there any reason the seller and I can't come to an agreement to simply waive the CC&Rs that I don't like? Especially if this is included in a purchase contract in some way?

The part I don't see is what a homeowner's association would have to say about this one way or another... unless they have some way of preventing me from buying under the conditions I want.

Luckily, there's plenty of houses with no restrictions whatsoever here in New England.

>rebar, and how good a connection is there between rebars and a good ground?
>
>If it were my house, I'd use a different method of grounding. Besides, there's no
>rebar in my foundation.

The key point you're both overlooking is that the rebar laced concrete
is a *much* better conductor than soil. Therefore the I^2R losses in
the concrete are much less than in the soil, so most of the heat *doesn't*
go into the concrete. You can't treat Earth as a perfect conductor, it
isn't, and it's in series with any other elements in the circuit connecting
to Earth. That's why you'd get "exploding dirt" long before you'd get
exploding concrete.

Because the Ufer ground is effectively many resistors in parallel,
the current divides through it in such a way that no one point has
a lot of I, and hence no one point has a lot of I^2R to generate
heat. The energy of a lightning bolt is only about 20 joules total,
so if you spread it a bit, it can't do much.

The Perseids meteor shower peaks this Weekend (August 12). I have only seen one
posting related to the Perseids shower from a planned operation in Grid JP30.

I am located in Grid FM05 in Central North Carolina. I have made meteor scatter contacts before on 2 meters using my 12 element yagi and 150 watts.

The most likely area to contact via meteor scatter for me is the midwest, including Wisconsin, Kansas, Texas, Arkansas, Indiana, Michigan, Louisiana, Missouri, and Illinois.

If you have information about the best times for trying scatter contacts, or would like to try a sked with me sometime this weekend, I want to hear from you.

73 and Good Luck,
Brian - KD4BFJ

>No. Almost certainly what he experienced was EMP. EMP effects are *the*
>most common antenna effect during a thunderstorm, far more likely than a
>direct strike because they occur for *every* lightning discharge within
>a several mile radius of the antenna.

Try this and I see if you get the same results..

When a thunderstorm is about 4 or 5 miles out hook a field strength
meter up to an antenna lead. Every time you see a flash in the
distance the pointer on the meter will move just a little bit. The closer
the lightining gets the higher the readings will go on the meter. You might
have to set the meter to max sensitivity at first and work down from their.

I have found that I can get a spark when the lightning is less than 1 mile
away.

Another thing.. I did have static build up once. When that happened I started
getting sparks from the center pin to the shell of the coax connector. As
the static charge got higher, the frequency of the sparks got faster. My
antenna or something very close to it was hit a few min. later. (blew the
element in my transitrap sp?)

Just my observations....

For fm operation, alternator noise on the supply to the amp is not going to create received noise on the other end (when the sig. is received) unless the fm receiver is of really poor design, or maybe (?) at really weak signal conditions. Noise (alternator or any other source) superimposed on the dc to the amp may cause am of the amp's output but this should not show up as signal (audio) out of the fm receiver.

2609. Wanted: Equipment donations for CAP squadron

Newsgroup: rec.radio.amateur.misc
Date: 1995-08-10 00:00:00 UTC
From: leber@panther.warm.inmet.com
Message-ID: <DD3t0F.956.0.-s@inmet.camb.inmet.com>
Source record: 240780

I inherited the position of Communications officer for a local
Civil Air Patrol/USAF Aux. Search and Rescue squadron, and have
found that we have essentially no useable radio gear other than
a single old Kenwood mobile.

If anyone has mobile or portable units capable of operations in
the 143-149 MHz range with CTCSS, we'd be more than appreciative
of donations. We are a charitable organization, so any donation
you might make is tax deductible.

Any help you can provide would be extremely valuable to us.
Replies via e-mail to: leber@warm.inmet.com

Thank you,
Tom Leber
Willow Grove Joint Reserve Base Squadron 902
Pennsylvania Wing
USAF Aux./CAP

In article <stevewDD1v7I.EzL@netcom.com>, stevew@netcom.com (Steve Wilson) writes:
|>
|> : But you agreed to that restriction before you bought the house. End of story.
|>
|> Uh..wait a minute here. What if he didn't know about the restrictions.
|>
|> You are ignoring that full disclosure isn't required in all 50 states!
|>

And this is what it comes down to when all is said and done.

Have you ever heard the proverb "Caveat Emptor". "Let the buyer beware."
The language should tell you just how old that proverb is. Life hasn't
changed all that much throughout history. If you think my 1964 Chevy is an
airplane, I have no responsibility to inform you that it doesn't fly before
you buy it. It is your responsibility to ensure the suitability of your
property to your intended use. It is a matter of simple contract law. If
you signed something without being sure of what signing it actually entailed,
who is the fool??

All the best.

:>members? i now live in new cambria, kansas...miss mass. a lot. he was
:>also a member of a civil war re-enactment group called the 5th mass.
:>battery. he loved cb's and even made his own scanner.:)

Nope. Sorry. The last CB'er I knew was my ex-wife. I got a CB for
her in 1977. Sure was a good trade. :-D

I did operate CB in Wilmington, Massachusetts from 1968 to 1973, then
joined the Air Force and did CB in Germany for three more years.
After coming back to this country (USA), in 1977, CB had gone to hell
in a handbasket so I went back to my previous hobby of SWL'ing. Then
in 1981 (when you had to learn everything for the amateur radio exam
vs. memorizing it) I obtained my amateur radio license and have been a
ham since.

I do more SWL'ing than hamming nowadays but I still get on the air and
do a little phone and a little bit more cw. (Good mode--but that's
another story :-) But just the same don't know anyone named Harry
Cochran...although my step-sister's last name is Cochran but she lives
in Portland, Oregon.

Cheers!

Howdy,

I'm thinking about attempting to work the meteors this weekend.
I'm new, but figured a try is worth it. I think I'm in DM42? Tucson Arizona.
Do ya think it'll be possible with a 3 element yagi and 25 watts.

Is there any particular direction it would be best to point my antenna.

Which mode is most popular, cw or ssb?

2613. GB2RS News 13th August 1995

Newsgroup: rec.radio.amateur.misc
Date: 1995-08-10 00:00:00 UTC
From: David Hough <dave@llondel.demon.co.uk>
Message-ID: <808106322snx@llondel.demon.co.uk>
Source record: 240784
Cross-posted to: uk.radio.amateur,rec.radio.info,rec.radio.amateur.misc

Good morning. It's Sunday the 13th of August and here is the GB2RS news broadcast, prepared by the RSGB and intended for all radio amateurs and short-wave listeners.

We start with news that the northwest of England now has some additional GB2RS services. As well as the existing VHF and UHF broadcasts on Sunday mornings, an 80 metre service has been re-introduced at 1030 local time on 3640 kHz. The VHF - UHF broadcasts are repeated at 2100 local time on 51.53, 145.525 and 433.525 MHz.

Next weekend, the RSGB will be holding a National Convention, this time at the Stafford Amateur Radio and Computer Show. The event takes place on the 19th and 20th of August at The County Showground, Stafford. In addition to a large trade show, the event will feature on-demand Morse tests, demonstrations, special interest groups and a bring and buy sale. There will be a large RSGB book and information stand, which will include an exhibition of photographs of historic radios and events, with the emphasis on Marconi. RSGB committees will also be present. Don't forget to take two passport-size photographs and the appropriate fee if you wish to take your Morse test at Stafford. An official show guide is published in the August Radio Communication.

If you can't make it to Stafford next weekend, here's a reminder that RSGB Headquarters in Potters Bar will be open on Saturday the 19th of August, from 10.00 am to 4.00 pm. The bookshop, museum, library and GB3RS shack will be available to visitors. Morse tests are also available on demand between 11.00 am and 12.30 pm. Don't forget to bring two passport-size photographs and the appropriate fee with you if you wish to take your Morse test at RSGB Headquarters next Saturday.

The IEE will be staging an International Conference on 100 Years of Radio at Savoy Place in London between the 5th and 7th of September, at which a number of radio amateurs will be making a significant contribution. One of the sessions, entitled 'Tuning and the Amateur', is chaired by RadCom 'Technical Topics' columnist Pat Hawker, G3VA. Other contributors include Professor Martin Sweeting, G3YJO, from the University of Surrey UoSAT programme; and Cecil Ramsbottom, G3BZQ, who will present a paper called "The Era of the Home Wireless Constructor". For further details contact IEE's Conference Services on 0171 344 5477 as soon as possible.

The Tenby Amateur Radio Club 6 metre Repeater Group will be holding tests to assess the coverage of their proposed 6 metre repeater on Saturday the 19th of August. The tests will take place between 12 noon and 3.00 pm using the club call, GW0VJO, on 51.510 MHz before QSYing to

another frequency. Reports should be sent to John, GW0JRF, whose address is correct in the current RSGB Call Book.

And the RSGB International HF Convention will take place at Old Windsor in Berkshire on the 9th and 10th of September. The event will feature lectures and presentations from some of the world's top HF operators and DXers, including Ron Stone, GW3YDX, who will give a talk called "Low Band Antennas - My Way". The talk will include a description of the current antenna system at GW3YDX, which has enabled Ron to work over 250 countries on 160 metres, as well as a discussion on some of the commercial antennas currently available. There will also be a 48-hour contest station operating in the WAE phone contest and, for the first time, DXCC QSL card checking will be available at the convention. Further details of the RSGB HF Convention and a synopsis of the lectures are published on pages 20 and 93 of the August RadCom. Alternatively, details of the lecture programme and a booking form can be obtained from Marcia Brimson at RSGB Headquarters on 01707 659015.

Now some items of HF DX news from the weekly RSGB DX News Sheet, which is edited by Chris Page, G4BUE:

From Cyprus, 5B4WN and others plan to be active from Manajin Island, which counts as AS-120 for the RSGB's IOTA awards, from today until Wednesday the 16th of August. The callsign will be C4MA and activity will be on 15, 20, 40 and 80 metres, SSB and CW.

From Indonesia, YE50RI is active as from now until Thursday the 17th of August, celebrating the 50th anniversary of Indonesian independence.

And from Turkey, TA4/DL1GRO and TA4/DL1GST plan to be active from now until the 29th of August. Activity will be on all bands, CW only.

Now news of some special event stations:

The Cambridge and District Amateur Radio Club is operating GB100NT from Wimpole Hall this weekend, the 12th and 13th of August, in order to celebrate the 100th anniversary of the National Trust. Next weekend, the 19th and 20th of August, the North Norfolk Amateur Radio Group will operate GB100NT from Sheringham Park.

GB0VIC will be operated by North Ferriby United Amateur Radio Society today, Sunday the 13th of August, at the Museum of Army Transport in Beverley, North Humberside.

GR0VLB will be on the air on Fridays, Saturdays and Sundays throughout August, representing the Voluntary Life Brigade in Sunderland.

PA6AMS, PA6TER and PA6DAM are on the air from Amsterdam from the 10th until Monday the 14th of August. The stations - active each day from 0800 to 2000 UTC - are commemorating the arrival of a colourful flotilla of tall ships and sailing boats from around the world.

The Braintree and District Amateur Radio Society will be operating GB2OAY from Andrews Field Aerodrome from Friday the 18th until Sunday

the 20th of August. The club is presently celebrating its 20th anniversary, and details of a 20th Anniversary Award can be found in the May edition of RadCom.

The Bangor and District Amateur Radio Society in Northern Ireland will be operating GR4GPF from Grey Point Fort between 10.00 am and 4.00pm on the 19th and 20th of August. For further details call GI3USS on 01247 473948.

Leicester Radio Society will be operating GB5VJ on Saturday the 19th and Sunday the 20th of August during its open days.

The Aberystwyth and District Amateur Radio Society will be operating GR0ARA on Sunday the 20th of August from the Aberystwyth Model Club's annual event at Blaendolau Aberystwyth. All are welcome.

And a special event station in Queensland, Australia with the unusual callsign "VI50 Peace", that's "V I Five Zero P-E-A-C-E", is active throughout August, September and October.

Next the Rally News:

The Derby and District Amateur Radio Society rally takes place today, Sunday the 13th of August, at Littleover Community School, Pastures Hill, Littleover, Derby. The venue is on the A5250 just north of the junction with the A38. Attractions include a monster junk sale.

Also today, the Flight Refuelling Amateur Radio Society holds its hamfest at the Flight Refuelling Sports Ground, Merley, Wimborne, in Dorset. Doors open at 10am and talk-in is on S22. The event features the usual mix of traders, bring and buy, craft exhibitors and a car boot sale.

The Great Eastern Rally takes place at The Cattle Market, Hardwick Narrows, near King's Lynn in Norfolk next Sunday, the 20th of August. The event features an outdoor car boot sale area, and a spacious indoor area with national exhibitors and a bring and buy stall. Talk-in will be on 2 metres channel S22. For further details contact Ian, G0BMS, on 01553 765614.

Next Sunday, the 20th, the West Manchester Radio Club will hold the Red Rose Rally at Silverwell Street, Bolton. Doors open at 11.00 am, or 10.30am for disabled visitors, and talk-in will be on 2 metres channel S22. For further information call Albert Davies, G7RZW, on 01204 62980.

Another Amateur Radio Caravan and Camping Club rally will take place at Stratford upon Avon between the 25th and 28th of August. For further details contact G4LWA on 01494 531755.

A computer and radio rally will take place on Saturday the 26th of August at Manchester University Refectory Hall, Oxford Road, Manchester. For further details call 0161 627 2502.

And the Galashiels and District Amateur Radio Society will hold an open day and radio rally at the Focus Centre, Livingstone Place, Galashiels on Sunday the 27th of August. For further information contact John Campbell, GM0AMB, on 01835 822686.

Now for the HF contest news:

There are no RSGB HF contests either this weekend or next weekend, but the European DX CW contest is taking place this weekend, and finishes at midnight tonight, Sunday the 13th. The Japanese KCJ CW contest takes place next weekend, the 19th and 20th of August. Brief rules for both these contests are on page 22 of the August Radcom.

And the South-East Asian "SEANET" SSB contest also takes place next weekend, the 19th and 20th. Brief rules are on page 20 of the July RadCom.

Next some VHF contest news:

The RSGB 432 MHz Fixed Station and 432 MHz Listeners contests take place next Sunday, the 20th of August, between 1700 and 2100 UTC. The rules are in the May edition of RadCom.

And now the solar factual data:

The period from the 31st of July to the 6th of August saw both solar and geomagnetic activity at very low levels, as expected. Not surpisingly, the higher HF bands have been rather poor. No flares were reported. Sunspot counts meaned at 15, with only one spot region being visible on the disc. Solar flux levels averaged 73 units and hardly varied from day to day. The electron fluence has remained at moderate levels for the whole period. The electron flux started at the minimum level of A1.0 units but increased slightly from the 4th August, giving an overall average of A1.8 units. The 90-day solar flux average has remained at 75 units, no change from the past two weeks.

Geomagnetic activity has been very quiet, with Ap levels down to only 3 units on the 31st, and averaging only 5.6 units for the period. The aa indices, as supplied by the British Geological Survey for the period 25th July to the 31st July, were very steady, averaging only 12.1 nanoTeslas or about K2.

I'll repeat the figures; spots 15, flux 73, Ap 5.6, X-Ray flux A1.8.

Now the Ionospheric data for Central France:

The F2 daytime critical frequencies at Poitiers, as reported by Meudon, hardly varied during the period. They averaged 6.3 MHz, and reached that level at 2000 every day. The darkness hour lows have returned to more like the value we would expect, and averaged 3.0 MHz, with the level being reached at about 0300 hours. Short periods of spread F were reported, particularly on the 3rd of August. Blanketing E was present on the 4th from 0800 to 1000 hours.

And lastly the solar forecast:

Today and tomorrow "Unsettled" geomagnetic conditions are expected, with Ap's up to about 20 units, due to a recurrent coronal hole. The rest of the week is expected to be quiet. Solar activity is expected to remain at very low levels. The solar flux level is expected to be about 75 units at first, but declining by the end of the week, as the quieter side of the sun looks our way. Ionospheric MUF levels during daylight in the south are expected to be about 20 MHz, with darkness levels about 10 MHz. For northern stations, MUFs will be at least 2 MHz lower. North - South paths will be best.

And that's the end of the solar information.

Finally in the main news, SSL has informed the Society that as of last Wednesday morning, the latest callsigns allocated were in the G0 Whisky India and G7 Victor Mike series, and Novice calls in the 2 0 Alfa Mike and 2 1 Echo India series.

>

The seller most likely inherited the CC&Rs when he bought the house. The developer who created them is the culprit. The seller doesn't have the right to waive them.

>The part I don't see is what a homeowner's association would have to say about
>this one way or another... unless they have some way of preventing me from
>buying under the conditions I want.

They can't prevent you from buying, but they can prevent you (or at least make it difficult) from violating them.

The CC&R's normally are recorded at the time a development is created. They are essentially part of the deed. If there is a homeowner's association, they usually have the ability to amend CC&Rs by majority vote and have the ability to enforce them (by lien against the property typically). This is part of the CC&Rs. If there is evidence of the restrictions not being enforced, or possibly only being selectively enforced, one MIGHT have a chance. Some CC&Rs have a 'sunset' clause which repeals them after a period of time unless they are explicitely renewed.

>Luckily, there's plenty of houses with no restrictions whatsoever here in New
>England.

As there are in most areas, but if you want a nice new house in a community, you will probably have to deal with CC&Rs. I, like many, don't have the antenna installation I would really like, but this is only one of the compromises of life.

Subject: Re: What is "HAM"??

No one has the definitive derivation of the term, "Ham."

So - here's mine.

The first time you showed interest in this magnificent hobby, "Ham"
stood for: Have A lot of Money.

Once you got the bug, of course, it now means: Had A lot of Money.

Source record: 240587

Back in my misspent youth in the Navy I was stationed at NavRadSta(T)
Driver, VA (near Suffolk, for those who care). We had an 800ft LF ve
air-gap lightning arrestor at the base insulator. The "ground" side w
copper stranded cable, perhaps 1" in diameter. This cable went to gro
the poured-concrete base, I think to a buried grid.

Once it took a particularly good hit and the copper cable vaporized "
could see" down into the concrete. At the top of the concrete there
crater about 10 inches in diameter and 6 inches deep centered on the
position. We never found any chunks of concrete, so I can't say if it
or "vaporized". There was slight evidence of "radial cracks" centere
cable location, but they extended just a few inches.

This base was a HUGE mass of concrete. I suspect it "absorbed" forces
have taken a greater toll on a smaller amateur installation.

:>getting sparks from the center pin to the shell of the coax connector. As
:>the static charge got higher, the frequency of the sparks got faster. My
:>antenna or something very close to it was hit a few min. later. (blew the
:>element in my transitrap sp?)

I was stationed at Keesler Air Force Base in Biloxi, Mississippi from 1981 to 1985. During the Winter of '82-'83 there was one severe storm after another marching through the southlands. Because of that I made it a point to always disconnect the antennae and lay the connectors on the floor when not using my radios...ha ha ha...wait.

Well, Field Day of that same year we knew T-Storms were coming through, just didn't know when. We evacuated our site at the first rumble of thunder. My house wasn't that far away. WB8FBN and N5BXG were staying at my house, Chris had just retired from the Air Force and was awaiting final out processing. We were in the kitchen talking when there was a bright flash and almost instantaneous sound of thunder. There was a loud "POP!" and a flash that came from one of my connectors sitting on the floor. An arc had gone across to the PL-259 sleeve from the center conductor. I made it a point from that time on and even to this day to short the shield and center conductor together and ground them. I've been pretty lucky so far.

Meanwhile, back at the Field Day site WA7SKG, who had stayed behind, was rubbing his mouth something awful. Mike was only a Technician at the time and was always itching to get onto HF. So, whilst those of us who could act as control ops were away, Mike kept our HF operations going on...at K5TYP (Tiny Yellow Polka-dots). [We didn't know this]. He was using an Icom 720-A with that small gooseneck microphone. Seems that when that lighting struck nearby an arc jumped from the mic to Mike's lips. I have referred to him as Sizzle-lips ever since.

Mike (WA7SKG), if you happen to read this...we would like to conduct an experiment. It will take place at Thrower Park in Biloxi, Mississippi during the last weekend in June of 1996. Bring your 720A and that gooseneck mic. Also, please bring a kite, lots of string, and a key. Not a cw key.

Oh by the way, we have to simulate conditions as they were in 1983. So you will forgive the rest of us if we do not attend. Sizzle-lips...ahhh haa haa ha.

Cheers all!

Very perceptive OM. My fat fingers hit the period key vs the
interogative key...didn't notice it until I had already sent it.
So...thought I would let it slide. <8-)

:>The above argument is good, very good...

Thank you. Hey I thought it sounded good as I wrote it. 8-D

:>It is good because it sounds so logical and yet it is patently untrue.
:>It takes a crafty and intelligent person to prove The False. I am awed.

Go on....

:>Step 1) Call PolyPhaser and ask them to send you a copy of their nice
:>blue booklet which explains all this nonsense in exhaustive detail.

Done...

:>Step 2) When the book arrives, read it. If you still have doubts...

Okay...

:>Step 3) Wander up to Toronto and have a long look at the CN Tour. It is
:>really (really!) tall, made of concrete, and is often left outside in the
:>rain. Although it is often hit by lightning, it appears to still be
:>standing; it hasn't exploded yet.

You mean they don't take it inside? [Notice the question mark is
properly placed].

Wow! I am awed by the size of thing [CN "Tour"] as it appears in my
mind from your description.

But...wouldn't a 2'x 2'x 4' piece of concrete (with or w/o rebar) be
more likely to suffer the effects of a lightning strike than a
behemoth concrete tower? [Notice another question mark properly
placed].

How long would it take the water in a small pot to boil? How long would it take all the water in a swimming pool to boil? Do you see what I am getting at? Isn't mass times something in the equation here? [And yet another question mark]. I'm batting 1000 here.

:>Have a nice day.

Yeah, thanks...I did have other plans but I really appreciate the thought. Jez kidding...Thanks!

[Delayed because I rearranged my packet station]

Divisional news

Amateurs who live in Canterbury City Council will be interested in the following extract from the Canterbury Express Wednesday 26th July 1995.

Pay TV reception structures

With the introduction of Pay TV Council has drawn up a draft local approvals policy on the installation of domestic satellite dishes, areials and antennae, including microwave antennae. Council would like your opinion on the draft policy that shows which structures would not need Council approval. This draft policy will be on display in all Council libraries and the Council's administration centre from 26th July through to 23rd August 1995.

If you would like to write a letter to the Coulcil regarding this policy please do so before 6th September 1995. For further information please phone Greg Scotton on 789 9377.

provided by Peter O'Connell VK2EMU

August/September Broadcast Roster

This August to September roster has been drawn up and was posted on Friday.

All broadcast team members should receive their copy by Tuesday. If you do not receive it by then, please call Steve VK2QZ as soon as possible.

If anyone listening would like to join the Broadcast Team please contact the Parramatta office on 689-2417 or Steve VK2QZ (QTHR).

No special skills are required, nor is an amateur licence, although we are always in need of a few more full-call amateurs and people with good 'news-reading' voices.

Steve Pullan VK2QZ, Broadcast Roster Co-ordinator

Divisional meeting

This week's meeting of the NSW Division of the WIA will be a closed meeting. There are quite a few sensitive issues to be discussed, not the least of which was the shabby treatment we received at the Federal Convention last weekend. As these and

other matters will take some time to discuss, it will be unfair to expect people to wait outside while these and other sensitive issues are determined. Things will be back to normal next month -- thank you for your understanding.

from Michael Corbin VK2YC, President

VK2 WICEN News

Last Sunday was the Annual General Meeting, and here is a brief report; no doubt a full report will appear in the newsletter. The AGM was preceded by a Regional Co-ordinators' meeting, at which Alan VK2YYJ was appointed to the position of Deputy State Co-ordinator
(2); congratulations Alan. The various reports were received, and the result of the election was announced; there being no opposition,
all candidates were declared elected, and they were:

President: John Buxton VK2GJB
Senior Vice-President: David Thorncraft VK2UDT
Junior Vice-President: Dave Horsfall VK2KFU
Secretary: Peter Corkeron VK2AGB
Committee:
Neale Imrie VK2CNI
Brad McMaster VK2KQH
Ron Hanks VK2UR
Mark Cheeseman VK2XGK

The Auditor is Phil Higgerson VK2OX; we offer our congratulations to all involved. Following the election was a general discussion period on various topics, such as training, nets, and the GRN system; Malcolm VK2YVA gave an interesting talk on the latter.

The next major event is the annual City to Surf Fun Run, next Sunday, for which David Shaw VK2TIP is the event commander. He needs quite a number of people for this race, and he can be contacted at home on (02) 588-5061 or at work on (02) 588-5100. This is followed by the Shahzada Horse Enduro, run by Andy VK2XRX over 21st-25th August.

September sees the VRA Bike Ride, on Sunday 17th; we understand that a good showing here will be advantageous when the Sydney Olympics come around, so if you want WICEN to be involved in them then consider helping out here.

The Hunter region are running a training camp on the weekend of 7-8th October at Crangen Bay, Lake Macquarie; all regions are invited, and further details can be obtained from Pauline VK2GTB on (049) 49-8786, or Frank VK2XVJ at VK2KLW. Given that a recent survey showed that 75% of WICEN members wanted further training, yet only eight people indicated an interest in the now-cancelled Goulburn seminar, you might like to attend this event instead,

which incidentally was made available through a training grant from the VRA.

-- Dave Horsfall VK2KFU, WICEN (NSW) Inc. Publicity Officer

Australian Amateur TCP/IP Address Coordinators

The master list of Australian state amateur packet radio TCP/IP address coordinators is now maintained on the Wollongong Packet/Internet gateway.

The file is called IPCOORD.TXT and is available via anonymous ftp on the Internet from:

hamgate.gw.uow.edu.au

which is also visible on AMPRNet as:

uow-gw.vk2amw.ampr.org (ip address 44.136.24.9)

The file will also be transmitted as a packet bulletin to TCPIP@VKNET quarterly.

The basic idea is that coordinators will maintain their own details on the file by e-mailing changes to an automatic file update process on the gateway.

Currently the file contains only the details of state IP Address coordinators. If the system proves successful, then its scope may be extended down to the local area coordinator level.

Enquiries can be directed to David Henderson VK2KWY whose contact details are:

on the Internet at vk2kwy@hamgate.gw.uow.edu.au

or on the PBBS network at VK2KWY @ VK2KWY.NSW.AUS.OC

and if all else fails he has an answering machine on area code (042) 84 04 73

Authorised by: John Tanner VK2ZXQ

AMPRNet Australian IP Address Coordinator

Dural Report

Here again is a report on the various activities at the Dural broadcast station VK2WI.

As advised some time ago, our 23cm repeater will be changing frequency to accommodate the new Band Plan. As from this morning, following the callbacks, it will be transmitting on its new frequency of 1273.500 MHz; it will have a 20 MHz positive offset, so its input will be 1293.500 MHz. It will be interesting to see whether anybody finds us this evening.

The Divisional TCP/IP advanced packet radio system has been delayed for various reasons, not the least of which was "porting" the software to a different operating system. We hope to have it operational in a few more days, under the callsign of "VK2KFU" until the paperwork has been approved. We encourage all listeners within range to give it a try; if necessary the required software will be supplied free of charge (plus postage), and we promise that you will wonder why you bothered with the clunky old BBS network.

This Division is committed to advancing the state of the art in Amateur Radio, and the industry-standard TCP/IP is the way to go. As an aside, the status of the former BBS is unknown, and recent developments have clouded the issue even further.

Although not Dural-related, but of interest to many members, we advise those with access to Internet that the old "aus.radio" newsgroups have been removed in favour of the new "aus.radio.amateur" hierarchy; this was initiated by Dave Horsfall over a month ago. It appears that these changes still have not propagated to some systems, so if your local provider does not carry these new groups then we suggest that you find out why their system administrator is not doing the job for which you are paying them.

-- Dave VK2KFU, Acting Dural Engineer

RD Contest

Are you taking part in Remembrance Day Contest? The "RD" Contest commemorates those Amateurs who gave their lives in the Second World War, and it is held on the weekend closest to the anniversary of the cessation of hostilities. This year, it will be on August 12-13th, which is next weekend, starting at 6pm local time next Saturday; full details appear in the July issue of "Amateur Radio" magazine. As this also coincides with the 50th anniversary of the end of the Second World War, it has been suggested that contestants indicate this in their calls; however, please remember that this is not the 50th anniversary of the contest itself.

Once again the rules have changed, but this time they are designed to pit each Division against itself by increasing the emphasis upon interstate contacts on HF, in line with the original aim of the contest. Copies of the rules, for those who do not receive "AR", will no doubt be available from the Divisional Office, or your local club. Please study these rules carefully, and take part.

At the time of writing, the broadcast arrangements for next week were not known, but it was traditional to provide a short broadcast that led into the opening ceremony at 1745 local time. Naturally, there will not be any callbacks, but if staff are

available then VK2WI will remain open to provide contacts.

Now that the fuss over the last couple of years has abated, perhaps all Amateurs can works towards getting the Remembrance Day Trophy returned to its rightful home here in VK2; it was ours originally, and for the past few years the VK3 Division has been winning it. Isn't it time it returned to the cabinet at Parramatta?

Please consider taking part in this important contest, and remember, "They shall not grow old, as we that are left grow old."

-- Dave Horsfall VK2KFU

HURRICANE ERIN UPDATE

Hurricane Erin was expected to hit the lower central east coast of Florida late Tuesday evening or early Wednesday morning last week. As of 11:00 AM EDT Tuesday, Erin was a Category 1 hurricane on the Saffir/Simpson hurricane scale. Amateurs were advised to monitor NOAA weather radio for storm coordinates, track and other information.

ARRL Southern Florida Section Manager Robert Van Winkle, AA4HT, reports that a regional net is in emergency session on 3940 kHz, with 7247 kHz as a back up.

The Hurricane Watch Net is active on 14325 kHz. Amateurs are advised not to transmit on these frequencies unless directed to do so by Net Control Stations.

-- from ARRL Bulletin number 76, dated Tuesday 1 August

SPECIAL EVENT STATION VI50NAVY

The Australian Naval Amateur Radio Society (ANARS) is commemorating the 50th anniversary of the end of World War 2 with a special event amateur radio station VI50NAVY.

The station will be operated on all anniversaries during the period April 25 to September 30, 1995. Operation is planned from all Australian states and territories, including a number of special locations.

Look for VI50NAVY on or around the following ANARS frequencies (kHz):

80 metres: 3620 (SSB) 3527 (CW)
40 metres: 7075 (SSB) 7020 (CW)
30 metres: 10125 (SSB) 10105 (CW)
20 metres: 14175 (SSB) 14052 (CW)
15 metres 21175 (SSB)

A special QSL card will be available for contacts with VI50NAVY Further packet bulletins will provide more details of specific operations.

--Glenn VK1XX, ANARS Chairman

IPS WEEKLY SOLAR AND GEOPHYSICAL REPORT
(28 JULY - 3 AUGUST)

ISSUED ON 4 AUGUST 1995

SUMMARY

Date 28 29 30 31 01 02 03
10cm 70 70 70 71 73 74 73
A 0 0 8 7 5 5 (7)
T 13 20 23 21 24 14 19

SOLAR ACTIVITY WAS VERY LOW ALL WEEK.

THE GEOMAGNETIC FIELD AT LEARMONTH (W.A.) WAS QUIET 28TH JULY TO 2ND AUGUST, AND QUIET TO UNSETTLED ON 3RD.

IONOSPHERIC F2 CRITICAL FREQUENCIES DURING THE PERIOD WERE MOSTLY NEAR PREDICTED MONTHLY VALUES. FREQUENCIES WERE ENHANCED BY 15 TO 30 PER CENT DURING LOCAL NIGHT ON 31ST JULY AND 1ST AUGUST. SPREAD F WAS OBSERVED DURING LOCAL NIGHT ON 28TH, 29TH, 31ST, AND 2ND.

FORECAST (4 AUGUST - 10 AUGUST)

SOLAR: VERY LOW.
GEOMAGNETIC: QUIET.
IONOSPHERIC: NEAR PREDICTED MONTHLY VALUES.

COURTESY OF THE IPS RADIO AND SPACE SERVICES

SUMMARY BY PAT VK2JPA ANARTS BROADCAST OFFICER

CLub News: Illawarra

The Illawarra Amateur Radio Society's next monthly meeting will be held August 8th starting at 7.30pm at the S.E.S. building Montague street North Wollongong visitors most welcome.There will also be a raffle of a telephone so bring ya money with ya.

Cheers de Brain vk2ubf.

Club news: VHF-UHF DX Group

VHF-SHF DX Group

Because the last VHF-DX Group meeting was devoted to a presentation on the cross-field antenna by Maurice Hately, GM3HAT, the meeting scheduled then will now be held on Tuesday 15 August at Amateur Radio House, starting at 7:30 pm.

This meeting will be a workshop on the construction of transistor and valve linear amplifiers for 144 MHz.

Notes on amplifier design will be distributed and working examples of valve and transistor linears will be exhibited to demonstrate how practical construction problems are solved.

All listeners are invited to attend.

The group also sponsors activity nights on 144 MHz on Tuesday evenings, recent activity nights have attracted participation from 2 metre stations as far away as Melbourne and Adelaide. So join in on the fun; you never know what you might work.

Why not check into the group's Sunday morning net on 146.5 MHz FM for details of group activities. The Sunday net starts at 11.00 am.

submitted on behalf of Richard Soulie, VK2ARS

Club news: Waverley

WAVERLEY AMATEUR RADIO SOCIETY

THE NEXT MEETING OF THE SOCIETY WILL BE ON WEDNESDAY 16TH AUGUST AT 7:30 PM AT THE CLUB HOUSE IN VICKERY AVENUE, ROSE BAY, NEXT DOOR TO THE R.S.L CLUB. DOORS OPEN AT 7:00 PM.

THERE IS NO GUEST SPEAKER PLANNED FOR THIS MEETING SO COME ALONG FOR A RAGCHEW AND SEE WHAT THE SOCIETY HAS BEEN UP TO LATELY. MAKE A NOTE IN YOUR DIARY THAT MEETINGS ARE HELD ON THE THIRD WEDNESDAY OF EACH MONTH.

PLEASE NOTE ALSO THAT THE SOCIETY'S PREMISES WILL BE OPEN DURING THE AFTERNOON OF THE FIRST SATURDAY OF EACH MONTH FROM 1:00 PM, PROVIDING A GOOD OPPORTUNITY FOR A GET-TOGETHER OR TO USE THE CLUB'S LIBRARY AND EQUIPMENT.

THE SOCIETY NOW PROVIDES BOTH THEORY AND MORSE CLASSES FOR PROSPECTIVE AMATEURS AND THOSE WISHING TO UPGRADE THEIR LICENCES.

EXAMINATIONS ARE ALSO CONDUCTED ON A REGULAR BASIS. THE FIRST THEORY CLASS IS PROVING VERY POPULAR AND WE ARE HOPING FOR NINE NEW NOVICE OR NOVICE LIMITED CALLS ON COMPLETION. DETAILS OF CLASSES CAN BE OBTAINED FROM GRANT, VK2TU, ON 319-1913.

--SIMON BUXTON VK2EII - PUBLICITY OFFICER

Club news:.A.A.T.C.

The next meeting of the A.A.T.C. Inc. be on the 2nd Sunday of this month as usual at 109 Wigram St. Parramatta - promptly at 1.00 pm. - August 13 1995.

Note - this meeting will discuss J.O.T.A. and the requirements that we need to fullfill.

Technical item prior to the general meeting will be how to get to Brisbane on 1.2 GHz by VK2ZAC Bill Cox. - A knowledge of aircraft flight schedules is an advantage, we are told.

Mark VK2XOF will have an update on the new repeater and Dave VK2GIO will describe his simple TV-Sync detector for repeater operations. Extra information for using domestic TV's and VCR'sTV to pick ATV.

Anyone interested in ATV is welcome to attend for general information and the general technical discussion.

For more information about ATV - contact Bob the Publicity Officer on (02) 587-3491 between 4.00 pm and 10.00 pm Mondays to Fridays.

AATC Inc. Publicity Officer Bob Barnes VJ2R

Club news: Great Lakes

The Annual General Meeting of the Great Lakes Radio Club Incorporated was held on Friday 28th July, 1995, followed by the regular monthly meeting. All of the previous Executive Officers were re-elected and are:-

President Stan Ellis, VK2DDL
Vice-President Ray Parry, VK2JRP
Secretary Shayne McBride, VK2XUV
Treasurer Daryl Waldock, VK2DAZ

In addition, Lindsay Ellis was appointed as Publicity Officer. Annual fees remain unchanged at $15.00. Members are reminded that these are now due.

Approved was an annual membership form to be completed and returned by each financial member so that accurate records may be maintained. Donations of computer equipment and an aerial tower section have been received during the past month and will be put to good use. Reports of future repeater developments were presented, and these activities are set to continue in the coming year subject to the constraints imposed by delays in official action and our limited income.

Our club net has been well attended during the past year, with the introduction of a weekly theme for discussion by our net controllers, Keith, VK2AT and Ray, VK2JRP, proving very popular. Any amateur within range of our repeater, VK2RGL, is invited to join in. The frequency is 147.375 MHz (positive off-set) and the time is 7.30 pm each Thursday. We look forward to hearing from you.

Stan Ellis VK2DDL

Club news: SPARC

The next meeting of the Sydney Progressive Amateur Radio Club

SPARC

will be held on Wednesday the 9 August at 7.30 pm at the club rooms. These are located at Middlemiss Street, Milson's Point, in

the first arch below the railway line (The State Emergency Services headquarters for North Sydney) and immediately to the north of Lavender Street and the new roundabout.

Our guest speaker will be the secretary of SPARC, Alan VK2AXA, who will be discussing his recent work at VHF and UHF and experiments in moon-bounce signal propagation. He has promised to bring along some of his apparatus and if things go according plan, will also demonstrate it in operation.

As notified in Microcom, the AN\PRC 64 A spy radios will be available for collection by those who ordered them. This is an interesting piece of apparatus and it may be possible to negotiate with intending purchasers so that a change of ownership occurs. At $50 each they look to have been a good purchase. Only crystals and a power supply are required to get them up and running. Why not come and have a "sticky beak".

Refreshments are avaiable and all are welcome.

Peter R Jensen VK2AQJ
President

If you have Tech or Novice study software files you would like to donate or if you know of where I could find some I would appreciate the help. I'm getting up the nerve to finally take the exam and I'm not quite sure which license I should shoot for - code or no code. Anyone who has experience taking both and would like to offer some advice to me is greatly encouraged to email me at PJAY0 (that's a zero at the end) @aol.com.

BK> Subject: Looking for historical radio messages

BK> I am looking for the text of some historical radio messages that were
BK> sent in the WWII era.

BK> A good frine of mine, and a fine Amateur Radio operator, who was the
BK> operator in Burma, running his beloved BC-191 out in the jungles at
BK> the edge of a remote P-51 fighter base (I even have a pic of him in
BK> the tent manning the beast) received the plain text message of the
BK> demise of President Roosevelt. Does anyone by a long stretch of the
BK> imagination have a copy of that anywhere? This opr copied it fresh
BK> for the CO and then trashed the original as-received copy. It would
BK> be neat to pass this along to him after 50 years.

BK> Also, does anyone have a copy of the final capitulation of Japan
BK> message sent at the close of the war?

BK> Also, does anyone have copy of the declaration of war message sent
BK> over the same circuits in 1941? Strangely, I can't seem to find a
BK> copy of these in any of the history books of the military govdocs.
BK> They would have been sent to everyone of any importance, and should
BK> have been preserved, somewhere.

BK> I would like to find the text, as close to the original as-sent
BK> messages as possible, to preserve a little history as it was actually
BK> sent via Morse code (computer generated background music for displays
BK> at a local museum and at amateur radio functions).

BK> Thanks Robert D. Keys rdkeys@unity.ncsu.edu

AMATEUR RADIO EXAMINATION OPPORTUNITIES

****

Want to find out what if your new FCC license has been granted?
Has it been 7 to 10 days since you took you examination?

If so, Call ARRL at 1-800-326-3942 (8 am to 4 pm weekdays, eastern time)
to find out -- or call the FCC at 1-800-322-1117 during business hours.

Your hardcopy (printed) license would follow shortly after the license
grant is indicated in the FCC Amateur Service data base.

If your test was coordinated through the ARRL/VEC, license turnaround
time will be approximately 7-15 days. This includes 1-5 days for the
VE team to complete their processing (the team has up to 10 days before
they must mail the results), 3-5 days between the VE team and the VEC;
2 business days at the VEC (in some cases only 1 day); and 1-3 business
days at the FCC. Allow 5 business days from the date that the VE team
estimates the test session results will reach the VEC.

If your license has not been granted within three weeks, and your test
was coordinated through the ARRL/VEC, call the ARRL/VEC at 203-594-0300.

****

The following test session information is provided by the
ARRL/VEC for the upcoming eight to twelve week period. For
further information, please contact the test session CONTACT
PERSON at the telephone number provided. If necessary, you
may contact the ARRL/VEC at 203-594-0200 x0282 for additional
information. Electronic mail may be forwarded to the ARRL/VEC
via USENET at "bjahnke@arrl.org" or via MCI Mail to
MCI ID: 653-2312 or 215-5052.

Although the test session information presented here does
not indicate whether walk-ins are accepted or not, most test
sessions do allow walk-ins. We encourage you, however, to
always contact the CONTACT PERSON at the telephone number
provided so that the VE Team is aware that you be attending
the test session.

NEED AN FCC FORM 610?

The ARRL/VEC can supply you with your needed Forms 610, whether they be for the Reciprocal Permit for Alien Amateur Licensee, Form 610-A; Club/Military-Recreation/RACES station, Form 610-B; or Form 610 for Amateur Operator/Primary Station License. FCC Form 610-R is a computer generated renewal form that will be sent from the FCC (beginning September 1995) to licensees whose license is to expire within 90 days. Form 610-V is the special application for persons seeking a Vanity call sign (as of August 11, 1995, that form is not available -- send the ARRL/VEC an SASE if you would like us to supply you with the form once it becomes available).

Several FCC forms, including Form 610, are available through the FCC's fax-on-demand service by calling 202-418-0177 (request form "000610").

STILL NEED TO PREPARE FOR YOUR EXAM?

If you would like information on how to become licensed; or how to locate Amateur Radio clubs, instructors, licensing classes and/or Novice examiners in your area; please contact the ARRL Educational Activities Department (EAD) at 203-594-0200 x0219. The EAD can also provide information on recommended study materials. Electronic mail may be forwarded to the ARRL EAD via USENET at "rwhite@arrl.org" or via MCI Mail to MCI ID: 215-5052.

EXAM LISTINGS - DEFINITION OF FIELDS

STATE
Test Date,VEC,City,,Contact Phone,Contact Person

The SECOND field in the following listing specifies the VEC which is coordinating this examination. This single-character designator denotes the VEC as defined below. An "A" (for example) indicates that this examination is coordinated by the ARRL/VEC.

For further information on any examinations listed, or if you do not find any examinations listed for your area, you may contact any of the coordinating VECs below.

A = ARRL/VEC, 225 Main St, Newington, CT 06111; (d) 203-594-0300
The 1995 test fee is $5.90.

X = Anchorage ARC, 2628 Turnagain Parkway, Anchorage, AK 99517;
(d) 907-786-8121, (n) 907-243-2221 (or) 907-276-5121
(or) 907-274-5546

C = Central Alabama VEC, 1215 Dale Dr SE, Huntsville, AL 35801;
205-536-3904

N = Charlotte VEC - HAS TERMINATED OPERATIONS

D = Great Lakes ARC VEC Inc. - STATUS UNKNOWN

E = Golden Empire ARS, PO Box 508, Chico, CA 95927; No phone.

G = Greater Los Angeles ARG, 9737 Noble Ave, Sepulveda, CA 91343;
818-892-2068, 805-822-1473.

J = Jefferson ARC, PO Box 24368, New Orleans, LA 70184-4368;
504-737-2315.

K = Koolau ARC, 45-529 Nakuluai St, Kaneohe, HI 96744;
808-235-4132

L = Laurel ARC Inc., PO Box 3039, Laurel, MD 20709-0039;
(d) 301-572-5124, 301-317-7819, (n) 301-588-3924

M = The Milwaukee RAC Inc., 1737 N 116th St, Wauwatosa, WI 53226;
414-774-6999.

H = Mountain ARC, PO Box 10, Burlington, WV 26710; 304-289-3576,
301-724-0674

P = PHD ARA Inc., PO Box 11, Liberty, MO 64068; 816-781-7313

R = Sandarc-VEC, PO Box 2446, La Mesa, CA 91943-2446; 619-465-3926

S = Sunnyvale VEC ARC, PO Box 60307, Sunnyvale, CA 94088-0307;
408-255-9000

T = Triad Emergency ARC, 3504 Stonehurst Pl, High Point, NC 27265;
919-841-7576

W = Western Carolinas ARS VEC, 5833 Clinton Hwy - Suite 203,
Knoxville, TN 37912-2500; 615-688-7771.
The 1995 test fee is $5.90.

5 = W5YI-VEC, PO Box 565101, Dallas, TX 75356-5101; 817-461-6443
The 1995 test fee is $5.90.

Cross-posted to: rec.radio.amateur.misc,rec.radio.info

[[EXAMNT8.11W : 3672 in EXAMNT8.11W]]

AMATEUR RADIO EXAMINATION OPPORTUNITIES

****

Want to find out what if your new FCC license has been granted?
Has it been 7 to 10 days since you took you examination?

If so, Call ARRL at 1-800-326-3942 (8 am to 4 pm weekdays, eastern time)
to find out -- or call the FCC at 1-800-322-1117 during business hours.

Your hardcopy (printed) license would follow shortly after the license
grant is indicated in the FCC Amateur Service data base.

If your test was coordinated through the ARRL/VEC, license turnaround
time will be approximately 7-15 days. This includes 1-5 days for the
VE team to complete their processing (the team has up to 10 days before
they must mail the results), 3-5 days between the VE team and the VEC;
2 business days at the VEC (in some cases only 1 day); and 1-3 business
days at the FCC. Allow 5 business days from the date that the VE team
estimates the test session results will reach the VEC.

If your license has not been granted within three weeks, and your test
was coordinated through the ARRL/VEC, call the ARRL/VEC at 203-594-0300.

****

The following test session information is provided by the
ARRL/VEC for the upcoming eight to twelve week period. For
further information, please contact the test session CONTACT
PERSON at the telephone number provided. If necessary, you
may contact the ARRL/VEC at 203-594-0200 x0282 for additional
information. Electronic mail may be forwarded to the ARRL/VEC
via USENET at "bjahnke@arrl.org" or via MCI Mail to
MCI ID: 653-2312 or 215-5052.

Although the test session information presented here does
not indicate whether walk-ins are accepted or not, most test
sessions do allow walk-ins. We encourage you, however, to
always contact the CONTACT PERSON at the telephone number
provided so that the VE Team is aware that you be attending
the test session.

NEED AN FCC FORM 610?

The ARRL/VEC can supply you with your needed Forms 610, whether they be for the Reciprocal Permit for Alien Amateur Licensee, Form 610-A; Club/Military-Recreation/RACES station, Form 610-B; or Form 610 for Amateur Operator/Primary Station License. FCC Form 610-R is a computer generated renewal form that will be sent from the FCC (beginning September 1995) to licensees whose license is to expire within 90 days. Form 610-V is the special application for persons seeking a Vanity call sign (as of August 11, 1995, that form is not available -- send the ARRL/VEC an SASE if you would like us to supply you with the form once it becomes available).

Several FCC forms, including Form 610, are available through the FCC's fax-on-demand service by calling 202-418-0177 (request form "000610").

STILL NEED TO PREPARE FOR YOUR EXAM?

If you would like information on how to become licensed; or how to locate Amateur Radio clubs, instructors, licensing classes and/or Novice examiners in your area; please contact the ARRL Educational Activities Department (EAD) at 203-594-0200 x0219. The EAD can also provide information on recommended study materials. Electronic mail may be forwarded to the ARRL EAD via USENET at "rwhite@arrl.org" or via MCI Mail to MCI ID: 215-5052.

EXAM LISTINGS - DEFINITION OF FIELDS

STATE
Test Date,VEC,City,,Contact Phone,Contact Person

The SECOND field in the following listing specifies the VEC which is coordinating this examination. This single-character designator denotes the VEC as defined below. An "A" (for example) indicates that this examination is coordinated by the ARRL/VEC.

For further information on any examinations listed, or if you do not find any examinations listed for your area, you may contact any of the coordinating VECs below.

A = ARRL/VEC, 225 Main St, Newington, CT 06111; (d) 203-594-0300
The 1995 test fee is $5.90.

X = Anchorage ARC, 2628 Turnagain Parkway, Anchorage, AK 99517;

2629. Re: Ground rods: why 8 feet?

Newsgroup: rec.radio.amateur.misc
Date: 1995-08-11 00:00:00 UTC
From: tigger@jcomm.uoregon.edu
Message-ID: <40f0ib$250@maureen.teleport.com>
Source record: 240636

I think that means a minimum of eight feet. Someone probably came up with it a long time ago as a good length to drive a rod into the ground to get good grounding effects with both good and poor quality ground (as in some ground offers more resistance than others). I believe that this eight feet is also in the national electrician's code.

2630. Re: Auto patch and 911

Newsgroup: rec.radio.amateur.misc
Date: 1995-08-11 00:00:00 UTC
From: rwilkins@ccnet.com
Message-ID: <40f1e0$n3r@ccnet2.ccnet.com>
Source record: 240637

Herndon R. Elliott (helliott@traveller.com) recently wrote
in <40ejm6$afc@tsunami.traveller.com>:

: Do they send squad cars screaming to the cell phone tower when someone
: hangs up?

The call comes into the 911 psap as a cellular type call. In our area
there is no cellular telephone number or location sent. Cellular callers
must give their location to the 911 psap dispatchers.

The cellular call is handled at a central switching center for multiple
towers in a large region.

: The 911 service in question sounds like it is screwed up and
: mismanaged and unprofessional, and should be revised and improved. Is
: that better?

Most professionally managed public saftey agencies will dispatch an
officer to a hang-up or no voice off hook type call due to established
liability. Some local governments are starting to charge for false alarm
responce calls. Our city charges fifty dollars after the third false call.

Oh Well. You would want them to come to your house if all you could do
is to push the 911 buttons on your phone before you pass out...
..it happens.

>rebar sticking through the foundation into the ground. At least those are
>the standard practices I've read.

Someone about a year ago provided an eye-witness account of lightning
hitting his tower and causing the cement base to burst apart. Chunks
of concrete flew in all directions causing severe damage to whatever
they struck. It was a most fascinating story - sure wish he come back
here and provide the details again. Him or someone else concluded
that the moisture in the cement vaporized to steam, and its expansion
caused the burst to occure.

Maybe we don't see "exploding dirt" because the steam can harmlessly
escape.

I can understand what you're saying. It seems that one cannot buy a
house in a new, fancy subdivision without all the CC&Rs. But that's
the way it is. I live on a busy, noisy street, in an older part of
town that has all the electric utilities above ground. Not a real
benign RF environment. But I have a 50 foot tower with a Cushcraft
A4 at the top and a 135 foot drooping dipole for the lower bands,
a 22 foot tower with satellite antennas mounted at the top, and
another pole on the other side of the house with a 2 meter antenna (for
packet radio), soon to have a 440 antenna. No compaints about the
antennas/towers (so far that is). My wife and I put up the tower in
the summer of 1985 so I think we're O.K. Because of all this, I put up
with the less than desirable location. Amateur Radio is more important
to me than a newer house in a new neighborhood. And, yes, I could
afford to move if I wanted to.

: You have all the choice in the world, you're just not willing to accept
: anything other than the specific lifestyle you envision for yourself. I'm
: sorry to say that, but the fact remains that no one is forcing you to sign

Hi Curt. The VE's are not required to automatically give the 10 question
test. Also, we do still have the fill in the blank tests available
at one group that I work with, but have not used it now in about a year.
It is up to us (the VEs) whether we want to use fill in the blank or
multiple choice. Please keep in mind that just because a team uses
multiple choice at a session does not guarentee that that is how it will
be next time.

I'd talk to the VEC - that's the coordinating body the accredits the
VEs who administered your exams. I should check, but I think the
number of questions you have to pass in a theory exam is mandated in
part 97, so they have no latitude in that area.

The VEs should tell you who their VEC is; the two largest and most
common are the ARRL VEC and the W5YI group. Neither would
administer exams graded as you describe.

I confess, we have often just graded the written text of the 1A exam,
looking for 1 minute of copy, most pass with that.
Once we mark the written, if the candiate would prefer,
we allow a 10 question test.

In over 5 years and hundreds of candidates, to the best of my memory,
no one has passed with the multiple guess when they failed the written
portion.

I must guess, because she passed... no 10 question test right?
(I hope that's all it is!)

Hi John

My only experience is preparing for a trip to Norway this fall. I recently received a reciprical license, which I applied for directly to the telecomunications agency in that country. I believe this holds for most of Western Europe. You can get the adr., forms and repeater allocations for the country(s) you plan to visit from the ARRL. Allow about 4 to 8 weeks for the foreign telecom agencies to process your application. Also, you should know that most European repeators have a 1750Hz tone burst to access them. Sometimes you can simulate that by whistling into the mic. There are tone burst generators available commercially and I've seen circuit designs in various mags. You can use your e-mail to get to the ARRL. Look on the League Lines page of QST for e-mail addresses. Hope that helps.

You would need a reciprocal license issued by the French authorities. Call the ARRL and request the info.

Your radio will work fine here. And as far as the scanner part is concerned, legally all the countries have to allow scanners (most do). Now whether the cop in the street knows that or not is another story!

Just dont make it too obvious when you scan around!

Enjoy your trip in France.

>Good for you. Many places this does not happen.

As you noted, Clark, almost all CC&Rs are imposed by developers of
subdivisions. That's a clue. Don't buy a house in a subdivision.
Buy some RA zoned land and have your house built to your specifications,
including any towers you may like to have erected. Lots easier when
the concrete trucks are already there. Or buy an older house not in
a subdivision and remodel.

In some over-developed areas, this may mean a longer commute than
you might like, but that's the price you pay to get away from
troublesome CC&Rs and homeowner associations. Personally, I prefer
to live at least a high power rifle shot away from the nearest
neighbors anyway.

>.
>
>1) What can I do to provide grounding to this station (being that I am so far
> away from the real-ground and from any water pipes)?

Well, if you use a balanced antenna, you don't need an RF ground at
all. So unless you're thinking about a vertical or a long wire, you
needn't be too concerned about an RF ground for the rig. However,
you do still need a lightning protective ground.

>2) What can I do about an antenna? We have no attic (my shack is the closest
> thing to an attic that we have)...should I:
> a) Drill into my shack ceiling to go right up to the roof? If so, what
> precautions should I take to insure that water/snow etc. wont leak into
> my shack?

Just use a standard aerial power entrance conduit equipped with a weatherhead.
Or use PVC vent pipe and two elbows to form an inverted U at the top to keep
the weather out. In either case, use the standard boot where the pipe feeds
through the roof to waterproof it. All this is in stock at your local home
supply store.

> b) Run feedline above the celing to the back or side of the yard and from
> there go to an antenna (eitheron the roof or next to the house)??
> Is there a chance the feed-line might get warm enough to present a fire
> hazard with it above my ceiling?

Well, you should avoid running a Texas kilowatt through RG-58. :-)
Otherwise, your cable should be sized large enough to avoid excessive
heating. You may have a problem if lightning comes to visit. To be on
the safe side, route your cables through metallic conduit.

>3) regardless of my antenna location, how do I properly protect it and my
> self/family/equipment from lightning and static discharge?

Ah, now here's the rub, and a possible reason to avoid roof mounted
antennas. You want to give Mr. Lightning a nice straight low impedance
path to Earth. Ideally, you don't want that path to pass inside your
house. So a ground mounted tower is usually better than a roof mounted

antenna. If you must mount on the roof, then make sure you have a nice
5 inch wide copper flashing running straight from the mast base to
Earth. Avoid any sharp bends that may add inductance. You also should
use an entrance bulkhead, a nice fat copper or aluminum plate, through
which *all* cables entering the shack must pass, and be attached to
it via proper suppressors. That plate is then tied to Earth with more
of that nice wide copper strap. This is called a single point ground
window, and is really important for good lightning protection.

>4) If I put the antenna on the roof, how do I prevent my neighbor from
> being exposed to RF? would a verbal warning and a sign on the roof
> be sufficient (since this is a duplex, we share a common roof..I have
> my side and he has his...but would he be in danger from RF if I was
> transmitting while he was on his side of the roof)??

Well, you don't want to scare your neighbor, but you should caution
him to check with you before going on the roof to make sure you aren't
transmitting. If nothing else, he could get a shock if he came in
contact with your antenna.

>Probably the simplest thing to do would be an indoor antenna, but I hear there
>might be health-risks with that (and I don't want to expose my family to
>any unecessary risks...especially with 2 small children).

Good idea. At moderate power levels, and with intermittant operation,
it's unlikely you'd be exposed to excessive risks, but why take even
a small chance, especially when an outdoor antenna will work so much
better.

Hmph. Sounds to me a lot like buying a condo... you own everything from the walls in, "everybody" owns everything from the outside walls out. No thanks. We're not buying a property we don't get to own. Ownership without use or rights to the property is not ownership.

I think it's a joke that anyone is allowed to sell property this way, without making all this very clear and obvious to all concerned. What's to stop the condo committ... uh, the homeowner's association from enacting any arbitrary restrictions they like...no religious statues...you must have two pink plastic flamingos in your front yard...we get to inspect your property for violations any time we feel like it...no bumper stickers we don't like...you must employ XYZ lawn service for lawn care, no mowing by owners allowed...etc. etc.

I know some people like this kind of thing, but power-grubbing bureaucracies always tend to get more out of control, not less.

>of power these little tyrants sitting on HOA boards give themselves!

The "little tyrants" are on these boards because they get elected by members of the association. They don't "give themselves" any powers. CC&Rs define how the board is selected/elected, what their responsibilities are, and what they can do. Much like a constitution. You think they are out of control? If you don't like how the place is governed, run for a seat on the board yourself. Or just go to their meetings and hold them accountable for what they are doing. I am sure you have heard the phrase, "we get the government we deserve." You will proabably find that the decisions that the board is making are backed by the association members. If not the board should be hearing about it. I have never seen a member of an HOA board stand up and say, "I am the king!" or, "Let them eat cake"...

I may have you mistaken for someone else, but aren't you the Steve from Milpitas that can do anything you want with a permit from the city? What organzation can come into your house and tell you how to live? Everyplace I have ever lived has had an HOA - they can sometimes tell me where I can park and and even resrtict some activities when within view or earshot of the neighbors. But they don't come in and tell what color to paint the bathroom. And I believe that you have blown that "amorous" example out of proportion - I don't need an HOA to tell me that I can't do the wild thing in my garage with the door open - but if they did, so what?

here is a general and specific question. how do I cross reference transistors, chips, etc. I do not want to call up parts stores, because I have so much salvage laying around the house, that I could build a hundred projects, and still not make a dent.

I have a NTE cross ref. program, but that only gives me NTE #'s.

Is there anything more general I could use?

Specifically, this time I was looking for a substitute for a TIP-120 I am sure it is a general purpose switching transistor, but it would have been nice to find some listed as a good cross.

thanks for the ideas.

I have previously posted here expressing my view that deed restrictions are part of the structure of business in a free society. However, I also want to state that there are two sides to most issues, and CCR's are no exception. The following is an effort to present the other side's view, from a more objective perspective.

To begin, the law recognizes the sovereignty of private property and that the aforesaid sovereignty belongs to the owner of the property. This means that the owner can do with it as he wishes - use it, rent it, sell it, or even destroy it, without permission from any other person.

If permission is required for some reason, then either the person holding title does not actually own the property, or the government has failed to recognize its sovereignty. The only justifiable exception is that the owner does not have the right to use his property for purposes that infringe on the rights of others.

With that in mind, it appears that deed restrictions remove the sovereignty of private property, and as such, should not be enforceable. The law recognizes that a person cannot sign away certain rights guaranteed by law, thus not all private agreements are valid. Is this the case with deed restrictions?

Painting a house florescent orange, or raising pigs, or installing antenna structures does not unconditionally infringe on the rights of others. Any of these actions could conceivably be a health hazard, or might devalue neighboring properties, but there is no valid argument for summarily dismissing the owner's right to use his property for these purposes *before the act*.

The legitimate approach to such issues is not through agreements that abolish the property owner's rights, but rather through the systems of criminal and civil law. Both are designed to resolve matters of law, and matters of civil dispute, after the fact. In so doing, these systems promote *due process*, a necessary ingredient to property rights that is missing from deed restrictions.

Isn't it more appropriate that a property owner who devalues his neighbor's property, or places his neighbor's health at risk, be answerable in a courtroom rather than to an arbritarily commissioned committee of private citizens? Does that committee even have the Constitutional or moral right to pass such judgement without due process, and in defiance of the principles of the sovereignty of private property?

Perhaps these agreements should be deemed articles that illegally and unconscionably abolish the inalienable rights of the property owner. Perhaps they are in direct contradiction to the individual rights recognized by government, and therefore, ultimately unenforceable regardless of the signatures of the parties.

Rather than upholding the individual rights of the parties, could it be that the existence of these restrictions in fact represents the state's failure to protect those rights and the freedoms of its citizens?

73,

Jack WB3U

From Tad Cook, KT7H
Seattle, WA August 11, 1995
To all radio amateurs

SB PROP ARL ARLP034
ARLP034 Propagation de KT7H

Solar flux is still low, about the same as last week. The average for this week is only three points higher than the week before. As of this writing the trend is down, with zero visible spots on the solar surface. Look for solar flux to remain at a low of around 70 for the next two weeks, then peak at just 80 by month's end. The only bright spot is that the geomagnetic field is expected to stay quiet. This is good for propagation over the poles, but of course the low solar flux keeps the chance of propagation down on the higher bands.

On Wednesday and Thursday there was some upset due to geomagnetic activity, producing K indices as high as four and five. This is expected to settle down after this weekend.

Sunspot Numbers for August 3 through August 9 were 26, 29, 28, 56, 33, 20 and 0, with a mean of 27.4. 10.7 cm flux was 73.3, 73, 75.1, 75.1, 73.7, 73.6 and 73.4, with a mean of 73.9.

The path projection for this week is from Bahamas to Vancouver, BC, Montreal, PQ and Nashville, TN.

From Vancouver, 80 meters looks good from 0300 to 1100z, and 40 meters from 0100 to 1200. 30 meters looks good from 2300 to 0700 and 20 meters from 2030 to 0430. 17 meters might open on some days from 2030 to 0330, particularly if solar flux rises to about the low seventies.

From Montreal 80 meters should be open from 2300 to 1100z. 40 meters could be open around the clock, with the best time from 0030 to 0930 and the poorest period from 1530 to 1900. Check 30 meters from 1700 to 0530 and again from 1000 to 1130. The strongest period should be after 0000. 20 meters looks good from 1300 to 1530 and better from 1900 to 0300. 17 meters may be open some days from 1730

to 2300.

From Nashville, check 80 meters from 2300 to 1200z. 40 meters should be open during all periods, with the weakest period from 0730 to 0900. Check 30 meters from 1100 to 0530. 20 meters should be open most days from 1800 to 2330, and on some days may be open as early as 1530 and as late as 0400.

To all radio amateurs

SB QST ARL ARLB079
ARLB079 Comment date for IARP

The Federal Communications Commission has assigned RM-8677 to an ARRL petition for rule making, to implement US participation in an ''International Amateur Radio Permit'' covering countries in the Western Hemisphere.

The comment deadline on this matter is August 31, 1995, and the reply comment deadline is September 15, 1995.

The IARP would allow, in conjunction with an amateur's home-country license, temporary operation in any other country in the Americas that has signed the agreement.

The IARP, the League said, would eliminate paperwork for both the FCC and for US, as well as foreign, licensed amateurs. Countries signing the agreement will not be allowed to levy a fee or tax on a visiting IARP-holder. IARPs would be issued in two categories: Class 1 (in the US, Amateur Extra Class privileges), and Class 2 (Technician class privileges).

> purchase contract in some way?

Yes, the reason being that the CC&Rs represent an agreement with the whole concerned group. Therefore only the group as a whole has the authority to waive any conditions. It is conceivable that the seller, being anxious enough to sell to you, might take it upon himself to get such agreement from the others for you, but you would certainly want to get his carefully documented, in writing, from the association. 73.

Price Club offers a 115 A/hr Eveready Deep Cycle 12v battery for $42. I've
been using one to power my entire shack for about a year now, along with a $39
charger, also from Price Club.

As an aside, I'm also looking into solar charging systems for it. For around
three hundred dollars, you could be completely portable and independent of
commercial power.

Of course, 115 amp-hours will power an HT or a QRP rig for weeks. But for
something like a Field Day setup, with a 100-watt rig or two, you'd either need
multiple batteries, or some way of recharging them in the field, either solar
or generator-based.

Come, let's not get too high and mighty about the sanctity of property or the right to contract. US law already puts many restrictions on what property owners can do when selling their property. For example, they can't put on enforcible restrictions that discriminate by race. For another, they can't subdivide the property below the zoning restrictions. While it's certainly arguable whether antenna restrictions are repugnant enough to justify another restriction on the freedom of property owners to dispose of their property in the manner they wish, I can't see that it's somehow immoral to even raise the question. Perhaps in your libertarian dream society, the rights of property owners are that unfettered; perhaps such a society would be better than the one that we have. But let's not confuse this dream society with the one we actually live in.

Most 2M rigs can be modified for the band you mentioned and will work
fine. Be aware though that these radios are not FCC type accepted for
that service and are illegal to use on it.

>Expensive ("but I'm worth it")...

No kidding. I've had a C228A 144/220 handheld for about 3 years and
its not been treated nice. I did have to crack it open after my
girlfriend had been carrying it around in her purse for a while.
It landed on the rotary channel changer knob a few times when the
purse got dropped. A bend with the pliers and a little solder put
things back in order.
Real easy on batteries. Lasts a long time. The big battery pack I have
occasionally has poor connections when slid onto the unit.
Moderate resistance to intermod or front end overload but it can get
through sometimes.

Who makes a better 144/220 rubber ducky antenna for this? I have the
AEA Hotrods and they work well when extended but are big and have to
be changed for each band. I think a rubber antenna about 12" long
would work great on 222 Mhz and better on 144 than the stock antennna.

Bad suggestion my part. Structural steel should be grounded. But it
should be tied back to a master gorund point with the other ground paths.
The rebar sould not be used as THE path for lightning to take to ground
when protecting anything else.

and

In article <40f0ib$250@maureen.teleport.com>
tigger@jcomm.uoregon.edu "Max Sabo" writes:

> I think that means a minimum of eight feet.

I seem to recall that in one pool question, 8 feet was "right" and a longer
size was marked as "wrong" :-(

There were several such weird questions, such as the one in which saying a
half-wave dipole radiated sideways was "right" and saying it radiated
straight up was "wrong". Also a whole bunch on coax impedance
transformations for odd numbers of quarter wavelengths, where the "right"
answers were the signs of the reactances (capacitative or inductive) and
the fact that those reactances were also equal to the characteristic
impedance of the line was irrelevant and "wrong".

If you want to ace the test, just disengage the brain and quote what the
pool says is correct.

Anyway, on the ground rod question, the CB sink idea from Jack sounds fine!

2674. New Ham Radio Tests - Macintosh

Newsgroup: rec.radio.amateur.misc
Date: 1995-08-11 00:00:00 UTC
From: john@wd1v.mv.com
Message-ID: <john-1108951719210001@wd1v.mv.com>
Source record: 240681

The new Macintosh Ham Test Simulators are HERE!

Novice Ham Test 5.0 SA.sea
Technician Ham Test 5.0 SA.sea
General Ham Test 5.0 SA.sea
Advanced Ham Test 5.0 SA.sea
Extra Ham Test 5.0 SA.sea

The latest versions feature:

HyperCard 2.3 as a stand-alone application (SA) eliminating
the need to have HyperCard. All you need is a Mac with 4
Meg of memory and version System 7 or greater.

Each version 5 Ham Test Simulator has the latest questions
as prepared by the Question Pool Committee.

Each Ham Test Simulator is FREE OF CHARGE and work the
same way as the originals written by Diana, KC1SP.

You may obtain a Ham Test Simulator by mailing me a *FORMATTED
disk (1 per test) and include a Self Addressed and Stamped disk
mailer for the return.

The Ham Tests are now also available via America On Line.

Each Ham Test Simulator is also bundled with a shareware CW
program called MacMorse 1.4 written by Doug, WB0EON.

Also included are a collection of text files that relate an
interesting variety of ideas about the best way to study CW and
prepare for tests.

If you load these onto file servers where others can gain access
via Internet, please let me know so we can point others in that
direction.

Your comments and suggestions for future versions are always
welcome. Stay in touch and good luck with your next test!

73,

ALSO AVAILABLE ON TVRO SATELLITE on Spacenet 3, Transponder 9, 6.8 Audio.
##########
Ham Radio & More is on the Talk America Network. It is aired LIVE
every Sunday at 6:00pm Eastern Time, originating from Phoenix, Arizona.

Our toll free listener call-in line is 1-800-298-TALK. The
originating station number is 1-602-241-1510 for more
information.

Any radio station can air the show FREE OF CHARGE. Get your local
station to air the show by calling the program director asking them
to air the show. Faxes help, too. Again,there is NO CHARGE for the
station to air the show, so a lot of calls asking for the show
can really work.

Also, be sure to check out our WWW Home Page. It has information on
upcoming shows,reviews of past shows, and even theme music. It is
updated courtesy of the Boston Amateur Radio Club. Access it at:
http://www.oakland.edu/barc/ham-more.html

That's likely how it started. Then it may have appeared in a few electric or building codes as the required size, and manufacturers didn't need to make them in any other length. Making the grounding rod length a number of wavelengths makes marginal sense, but only if you ignore that there's almost always a wire attached to the rod that forms some of the length of the whole grounding system.

>Radio is more important to me than a newer house in a new neighborhood.
>And, yes, I could afford to move if I wanted to.

Unfortunately in the Bay Area at least, the older, settled, CC&R-free
neighborhoods tend to be *more* expensive than the new, CC&R-riddled,
subdivisions -- mainly because the old neighborhoods are close in and the
commute is shorter. So it's not that people are faced with a trade-off of
nice new house & no tower versus ugly old house and tower; it's no house and
no tower versus house and no tower.

This doesn't have anything to do with ham radio, but I'm sure there are some hams out there that can help me.

i have some old HP 2648a graphics terminals. I have a manual for HP Terminal Basic, which runs on them, but I don't have a tape with the software on it. Does anyone have such a tape? If so, could you make me a copy if I sent you a blank tape?

As far as I know the TH28E of Kenwood is able to transmit also in the

required 154 MHz region. Inside the handheld transceiver one certain diode must be removed for that. In case you like to receive more particulair information, I am pleased to be sof any assistance.

Kind regards,

Stefan

I really like my 51R better than any handheld I've owned (411 & 470)
The features I like are the Alphanumeric display for the repeater
being listened to as well as the built in help function. I also
really like the battery voltage display. I've experienced no cracks
after having it 3 months. The only negative is that it is heavier
than it looks. It is a real brick with the large battery (not in size
but in weight). In fact you probably could use it as a personal
protection device, you could knock someone senseless with it. :-)

>so if you spread it a bit, it can't do much.

While I don't know if anyone's foundation WILL explode, it could
considering how much heat can develop almost instantly.

But there is something I haven't seen addressed in this thread when
talking about lightning protection. Most of the figures, equations and
ideas I have seen here about how these things can happen seem to be based
only on a DC applications of Ohm's law. Until just recently, I
also considered lightning protection to be a project that worked with
just a DC path. I was recently enlightened to the fact that you must
consider AC reactance when designing a lightning protection system as
well as the DC path.

When lightning hits a conductor, such as a tower, a ground cable, or a
piece of rebar, there is a BIG surge in current through that conductor.
The smallest lightning surge ever recorded was 5000 amps with a 5 usec
rise time. The average lightning surge is 25,000 amps. There is of
course, a magnetic field that grows during the rise. If the conductor

goes through something like a metal conduit, or has any sharp bends, etc, it can act like a choke and raise the potential between both ends of the path. With some of the some of the numbers I have seen, it's a big hazard, and was quite an "eye opener".

Not considering the inductive reactance of your lightning protection system can lead to unaccepatble protection of you and your property. With this in mind, I sure as hell would NOT rely on rebar in my foundation in my lightning path to ground. In fact, I would keep my system isolated from the rebar as much as possible.

ANARTS News Bulletin 870 6TH AUGUST 1995

It is that time, that time of the year again when membership fees are due, or overdue. If you wish to support the work ANARTS does, please join the Society or renew your membership, at only ten dollars a year. We serve the HF digital amateurs of Australia, and in this time of low sun activity, New Zealand as well. Our broadcast goes round the world either on air or on Internet.

Address your letter with details of name address, callsign, hobbies, anything else we might find interesting, and send it to The Secretary, ANARTS, P.O. Box 860 Crows Nest Australia 2065

SARTG WW RTTY CONTEST (CONT.)

SPONSORED BY THE SCANDINAVIAN MATEUR RADIO TELEPRINTER GROUP

WHEN: AUGUST 19-20, 1995

AWARDS: TO THE TOP STATION IN EACH CLASS, COUTRY, AND DISTRICT, IF THE NUMBER OF QSOS IS REASONABLE.

LOGS: USE SEPARATE LOGSHEETS FOR EACH BAND. LOGSHEETS MUST SHOW: BAND, DATE/TIME (UTC), CALLSIGN, EXCHANGE MESSAGE SENT AND RECEIVED, MULTIPLIERS, AND QSO POINTS. SUMMARY SHEET MUST SHOW SCORING, CLASS, YOUR CALLSIGN, AND NAME AND ADDRESS. MULTI-OP STATIONS MUST SHOW THE CALLSIGNS AND NAMES OF ALL OPERATORS INVOLVED. YOUR COMMENTS WOULD BE VERY MUCH APPRECIATED.

DEADLINE: LOGS MUST BE RECEIVED BY MAY 30 TO QUALIFY. MAIL LOGS TO:
SARTG CONTEST MANAGER
BO OHLSSON, SM4CMG
SKULSTA 1258
S-710 41 FELLINGSBRO
SWEDEN

HAPPY CONTESTING.

LOGS COMING IN WELL FOR ANARTS CONTEST

WITH THREE WEEKS TO GO, WE HAVE RECEIVED 44 LOGS ... IS YOURS IN THERE? IF YOU CANT GET THE SHEET TO WORK OUT YOUR SCORE, OUR FRIENDLY CONTEST MANAGER WILL TAKE CARE OF THAT CHORE FOR YOU. BE IN IT.

DONT FORGET ... LOGS MUST BE RECEIVED BY THE 1ST OF SEPTEMBER.

ARLD042 DX news

This week's bulletin was made possible with information provided by Charlie, KY0A, Bob, WB2YQH, The 599 DX Report, the Yankee Clipper Contest Club PacketCluster network and Contest Corral from QST. Thanks to all.

UPDATE ON JUAN FERNANDEZ, CE0Z. The September operation is still on. Plans call for the use of full size delta loop antennas for 160 and 80 meters, both hung from a 150 foot commercial tower and Yagis for higher bands. Emphasis will be on low bands, RTTY and WARC bands. QSL via K0IYF.

UPDATE ON HEARD ISLAND, VK0. Equipment is being crated for mid to late August shipment to Australia. Gear and team should both arrive on Heard on November 12. A cook/camp manager is still needed for this DXpedition.

NAMIBIA. Charlie, KY0A, will be active as either V52YG or V52/ZS6YG, from August 7 through 10. This before sunrise/after sunset operation will be on 160, 80, 40 and 30 meter CW only. Charlie hopes to try some 17 meter QSOs late in his trip. QSL via KY0A.

CHRISTMAS ISLAND, VK9X. Uwe, DJ9HX, is active from Christmas Island as VK9XI. He has been worked on 14027 kHz at 1123z and 14177 kHz at 1422z. QSL via DJ9HX.

ANDAMAN ISLANDS. VU2AU has been on 14195 kHz at 1700z arranging schedules with Mani, VU2JPS.

BENIN, TY. Sigi, DJ4IJ, was supposed to be active by now as TJ1IJ, though there have been no PacketCluster spots on the New England network as yet. Stay tuned.

ISLE OF MAN, GD3. Dave, GD3NKC, will be working mainly CW on the low bands from August 5 to 19. A Wednesday SSB schedule will be on 1870 kHz at 2130z.

UK BASE CYPRUS, ZC4. Listen for ZC4C by OK1ADM, OK1RF and OK1RI August 6 to 18, including a stint in the WAE CW Contest. QSL via OK1RI.

SAINT PIERRE AND MIQUELON ISLANDS. FP5AA, operated by K2RW, should be on the air August 15 to 19. Try 14165 kHz between

1100 and 1200z to arrange schedules. QSL via K2RW.

CREN 50th Anniversary Contest, sponsored by Club de Radio Experimentadores de Nicaragua, takes place on August 6 from 0000z to 2400z. Choose CW, SSB or RTTY, single operator only, on 40, 20 and 15 meters. Exchange signal report and consecutive serial number. For 50 points, work YN1YN, the HQ station of CREN, which can be worked only once. For 10 points, work YN1ATM or YN1OC, founding members of CREN, also only once each. Other YN stations net 5 points each. And all other QSOs net 1 point per QSO. Final score is total QSO points multiplied by 50. Send log and summary before September 8 to CREN, Box 925, Managua, Nicaragua.

COMING EVENTS

AUGUST 19th-20th SARTG WW RTTY CONTEST

SEPTEMBER 3RD DARC CRORONA 10M DIGI

Society information

The Society may be contacted at : PO Box 860, Crows Nest 2065 Australia, for such matters as membership and general enquiries. Enquiries can also be made by packet to the President(Col) VK2CTD at VK2XSB, or the Secretary (Pat) VK2JPA at VK2AAB.

News items may be sent to Broadcast Officer PO Box 60 Blacktown 2148 Australia, or by packet to VK2JPA at VK2AAB. Email address for the Broadcast Officer is :

patl(at)pitt.conmusic.su.oz.au

The Society welcomes news items on any digital subjects from anywhere in the broadcast coverage area. We are looking forward to news from your areas to let other amateurs know what you are doing in the hobby. Hope to hear from you.

2685. WTB: Perimeter Intrusion Alarms

Newsgroup: rec.radio.amateur.misc
Date: 1995-08-11 00:00:00 UTC
From: kjn@netcom.com
Message-ID: <kjnDD4G2F.HHn@netcom.com>
Source record: 240725

I'm looking for some of the Vietnam era military surplus seismic perimeter intrusion alarms. These units were several inches long and about and inch and a half in diameter, had a detachable sensing probe that stuck in the ground, and a VHF whip antenna that resembled a rolled up measuring tape when stowed. They operated on 9vdc. with a power output of 50 - 100 mw. Transmit freq was in the VHF band between 130 mhz. and 150 mhz.

A friend located a few at the Santa Maria ham swap meet this year.

Any info appreciated.

Geeze, a bunch of people who are charged with (and quite likely paid
for) responsibility for the average pedestrians emergency situation,
and they can't even come up with a way to remember that a particular
phone number is not that of the caller?

Do they send squad cars screaming to the cell phone tower when someone
hangs up?

The 911 service in question sounds like it is screwed up and
mismanaged and unprofessional, and should be revised and improved. Is
that better?

: It is my understanding that a foundation can explode if the tower it
: is sunken into takes a direct hit. There is usually moisture in the
: ground and likely in the foundation too.
: What does lightning do? It doesn't just strike the ground and that's
: the end of it. Any moisture could be affected too. If your tower is
: hit couldn't the moisture in and around the foundation boil or
: vaporize instantly? Wouldn't it stand to reason then that the
: resulting gasious expansion could cause the foundation to
: "shatter/crack/ or explode?" Isn't this an effect of the heat
: generated? Wouldn't it be the same as putting an ice cube into a
: glass of tepid water? Listen to it crackle...couldn't the temperature
: differential create the same results? I haven't tried ice cubes with
: rebar yet... <%-*
: This doesn't mean all foundations will shatter/crack/explode all the
: time but the chances are pretty good that they can.
: Any Physics majors here.

[A question? Yes... BSc Physics 1983... totally irrelevant...]

The above argument is good, very good...
It is good because it sounds so logical and yet it is patently untrue.
It takes a crafty and intelligent person to prove The False. I am awed.

Step 1) Call PolyPhaser and ask them to send you a copy of their nice
blue booklet which explains all this nonsense in exhaustive detail.

Step 2) When the book arrives, read it. If you still have doubts...

Step 3) Wander up to Toronto and have a long look at the CN Tour. It is
really (really!) tall, made of concrete, and is often left outside in the
rain. Although it is often hit by lightning, it appears to still be
standing; it hasn't exploded yet.

Have a nice day.

: I thought every radio produced or homebrewed came with at least two
: modes, AM/Arguing, AM/SSB/CW/Arguing, etc., etc. Isn't Arguing
: actually the oldest and most common mode anyway?

: Cheers!

Jim, Arguing isn't a mode, it is a simple verbal encoding of a
physiochemical imbalance. Its true "digital" nature surfaces
when the imbalance increases and induces an imbalance in nearby
bodies, which then begin to self-oscillate. This self-oscillation
often results in various hand gestures involving one or more digits.
While arguing is not harmful itself, digital gestures have been known
to cause spontaneous nose-bleeds.

"Spark" is actually the oldest mode and directly preceded "Arguing",
and both modes had their early origins in Devil Worship, thus the
phrase "What the Hell sparked this argument, anyway?"

>: I really don't understand the basis of this argument. The houses you
>: want to buy are private property.

>Your answer says that I have to move away from my job to solve my
>problem.

Well, only because I assumed you intend to build an outdoor antenna
structure regardless. There are other options, such as complying with
the covenants.

>That is the effect of implementing your answer. My gripe is that the
>available property is rediculously limited by severe CC&R's in most of
>this region, yet this is the region I MUST live in because of my
>particular jobs skills. There isn't a great deal of choice in this.

You have all the choice in the world, you're just not willing to accept
anything other than the specific lifestyle you envision for yourself. I'm
sorry to say that, but the fact remains that no one is forcing you to sign
a contract you don't agree with, no one is forcing you to purchase a brand
new house, no one is forcing you to live in an area disagreeable to
your intended lifestyle, and no one is forcing you to install an outside
antenna structure.

Yes, the Deed Restrictions seem harsh and unrealistic to me as well, but
it's not your right nor mine to violate the sovereignty of private
property. I think that's what you're implying should be done.

>Again...the sellers (except the original developers) don't really have
>any say in this issue.

The sellers voiced their opinions on this issue when they purchased the
property. The fact that they agreed to be subordinate to the HOA from then
on does not mean they have no say. It's just that they already said it,
and now they're not allowed to arbitrarily change their minds.

>: You have no such right - you only have the right to purchase
>: property that a seller agrees to sell.
>
>So I don't have a right to pursue happiness? Boulderdash!

That's not what you're asking for. You want the right to either abolish or
eliminate legally binding agreements governing the terms of sale of private

property. The ability of buyers and sellers to do this is innate to a free society.

>Jack, another simple fact that you ignore is the power that
>Home Owners associations have.
<snip>
>I think it is high time that we reconsider the amount of power these
>little tyrants sitting on HOA boards give themselves!

Yes, I'm sure there are some real bastards sitting on those committees. Nevertheless, their power comes solely from the people who agreed to the covenants when they bought the properties.

Regardless of your dislike of this situation, it is the natural result of living in a free society. As long as we have property rights, there will be property and conditions more suited to some than others.

2693. NEW Airport Security Issues

Newsgroup: rec.radio.amateur.misc
Date: 1995-08-11 00:00:00 UTC
From: Curtis Wheeler <cwheeler@ccnet.com>
Message-ID: <40eist$jgo@ccnet2.ccnet.com>
Source record: 240733

Anyone that was watching the news yesterday (8/9) probably heard that the federal government has ordered increased security at all airports starting today (8/10).

On of the issues, in addition to needing picture ID when checking bags, etc., was increased diligence of security checkpoint personnel. It may be the end of breezing through the xray/metal detectors with your HT without question...at least for a while. There should still be no reason for security to prevent you from getting on board - but expect to be looked over a bit more than you may have been before.

My wife is head of the geology/earth science department at a local community college, and is studying for her no-code tech. She asked me why there seems to be a magic length of eight feet for a ground rod. I was unable to come up with an answer, and we didn't find one in the ARRL 1995 Handbook.

Being a geologist, she is curious about this. Can anyone help?

Thanks in advance,

Jim

Well I am here to tell you Pigs on a hot humid summer day can ruin a nice picnic.
WHEW !! they sure can smell. nothing against the farmers who raise them though.
I am from NW OHIO, you could smell the hog farms for a good mile or so. There is
one fellow in Soothwestern WA who is doing just that. He wanted to subdivide his
land, local zoning board said no. He checked and found he could raise Hogs, has
threatened to have the biggest hog farm in Washington State. the public will laugh
until they step outside some nice evening. Also make sure others are living up to
the CC&R, like is it ok to store the boat or camper at their home ? About the time
the complainers get the monthly storage fee for the camper at the storage lot, an
antenna starts looking pretty good. Check to see if the shed or storage building is
allowed too. Paint the house some bright color. Many things one can do to stir
the pot.

There are shareware versions of PKZip/PKUnZip that only cost you $25.00 to
register, that's almost free :-)

2700. This Week in Amateur Radio #124 (for air through 8/18/95)

Newsgroup: rec.radio.amateur.misc
Date: 1995-08-12 00:00:00 UTC
From: "Stephan M. Anderman" <sanderman@delphi.com>
Message-ID: <5dJCi5U.sanderman@delphi.com>
Source record: 240600

Here is a summary of news items covered on edition #124 of "This Week in Amateur Radio", North America's satellite-delivered audio bulletin service, for the week ending 18-Aug:

-

1. Maryland Amateur Celebrates a Special VJ Day 50th Anniversary
2. Fundraising Effort Will Put Amateur Call Signs Aboard Phase 3D
3. Computer Chip Market Grows 52% to $16.3 Billion in 1995
4. South African AMSAT's SpaceCon '95 Scheduled for Next Month
5. Russian Op Activates Vietnam (3W), Announces New QSL Address
6. "Gateway 160 Meter Net Report" with Vern Jackson, WA0RCR
7. "Amateur Radio Newsline" - Edition #939 from Los Angeles
8. Upcoming Special Event Stations with George Bowen, N2LQS
9. Amateur Radio Suffers Loss of Two More Silent Keys
10. Weekly Propagation Forecast
11. Financial Support for "This Week in Amateur Radio" Dwindles
12. "The RAIN Dial-up" from Chicago

-

Satellite time and uplink equipment have been provided by SKYVISION as a service to the amateur radio community. Funding to access "Newsline" was provided by a grant from the Stoddard family and users of the KF9MP repeater system in North Webster, Indiana.

-

"This Week in Amateur Radio" is a weekly amateur radio news and information service, in audio newsmagazine format, which is produced by Community Video Associates, Inc., a New York State not-for-profit corporation based in Albany, New York. The program is carried on the "Tech Talk Network" each Saturday at 7:30 PM (EDT) on the Telstar 302 commercial communications satellite, transponder 21 (11V), 5.8 MHz wideband audio (4.120 GHz), located at 85 degrees west longitude in geosynchronous orbit, and can be heard on various VHF/UHF repeaters throughout the United States and Canada, as well as on 160 meters at 1860 kHz. Contact your local amateur radio club or repeater operator if "This Week in Amateur Radio" is not being heard in your area.

-

Production and transmission expenses are underwritten by contributions from repeater system operators, amateur radio clubs, and individuals. For further information, contact George Bowen, N2LQS, at 518/283-3665, or Stephan Anderman, WA3RKB, at 518/664-6809. You may also reach them via amateur packet @ WA2UMX.FN32AW.ENY.NY.USA.NA or on the Internet to KXKVI@DELPHI.COM or SANDERMAN@DELPHI.COM.

>>so if you spread it a bit, it can't do much.
>
>While I don't know if anyone's foundation WILL explode, it could
>considering how much heat can develop almost instantly.

I made a misstatement above, there are about *20 coulombs* total in
a lightning bolt, not 20 joules. Calculating the number of joules
in the discharge is more complex. Lets crank some typical numbers,
but first lets review a little physics.

It is energy that boils water, not power. Energy is measured in joules,
calories, BTU, etc, and is power per unit time, IE we are most familiar
with it expressed as kilowatt-hours. A lightning discharge moves a certain
amount of charge, measured in coulombs. Now an ampere is 1 coulomb per
second, so we can get the total energy dissipated by the bolt in a given
resistance by using I^2*R and using 20 coulombs-sec as the amperage, doing
it this way factors in *time* so that we get joules instead of watts. Now

an effective ground connection must be less than 25 ohms according to the NEC, and the Ufer ground meets that requirement handily, so for worst case, 20^2*25 will give us the number of joules dissipated in the Ufer ground, or 10,000 joules. Now 1 joule will raise the temperature of 1 gram of water 1 degree Celsius, or one lightning bolt will raise the temperature of 10 kilograms of water in the Ufer ground 1 degree. That's how much heat we're talking about here. Not a lot.

OTOH, *peak* power is very high, on the order of 8000^2*25 or 1.6 billion watts. But this is a very short duration pulse, so the energy of the bolt is still fairly low. This is like any other pulse source, like radar, where the peak power may be *very* high but the average energy of the radar beam is quite modest. That's why small magnetrons with modest cooling requirements can produce pulses with a peak power of 100s of kilowatts, but *don't* have the *heating* energy of a continous 100 kW power source.

What we have to be wary of is *spot* effects. If we concentrate the heat energy on a very small spot, we get dramatic effects. This is like using a magnifying glass to burn an ant. The energy from the Sun normally doesn't cause an ant to burn because it is diffuse, but concentrate a bit of it with a magnifying glass and you can make the ant burn. The same thing can happen here. If a high resistance spot dissipates most of the bolt's energy, that spot can get very hot. This is the advantage of the Ufer ground, it *spreads* the bolt energy over a large Earth contact area. Like millions of resistors in parallel, it shares the bolt energy over a large volume. This is like a magnifying glass in reverse, IE a diverging lens, and is why the concrete does not explode.

>But there is something I haven't seen addressed in this thread when
>talking about lightning protection. Most of the figures, equations and
>ideas I have seen here about how these things can happen seem to be based
>only on a DC applications of Ohm's law. Until just recently, I
>also considered lightning protection to be a project that worked with
>just a DC path. I was recently enlightened to the fact that you must
>consider AC reactance when designing a lightning protection system as
>well as the DC path.

Yes, we must consider the AC effects, but remember that for power the AC equation is just P=I*E*cos(theta), where theta is the angle between current and voltage. *Worst case* from our point of view is when cos(theta) is 1, IE when the current and voltage are in phase, and that devolves to the same as DC. At any other angle, we have VAR, or so-called wattless watts, IE the net energy delivered is less than the DC case. So for worst case heating calculations, we can use the DC equations and be confident that they are conservative.

>When lightning hits a conductor, such as a tower, a ground cable, or a
>piece of rebar, there is a BIG surge in current through that conductor.
>The smallest lightning surge ever recorded was 5000 amps with a 5 usec
>rise time. The average lightning surge is 25,000 amps. There is of

>course, a magnetic field that grows during the rise. If the conductor
>goes through something like a metal conduit, or has any sharp bends, etc,
>it can act like a choke and raise the potential between both ends of the
>path. With some of the some of the numbers I have seen, it's a big
>hazard, and was quite an "eye opener".

Well, my references disagree with yours on average surge currents, giving an average of 8,000 amps, but I'll agree that's still "BIG". Remember, however, that it is also *brief*. It does not behave the same as a *constant* current of that magnitude, so motor effects are small. We have to be wary of an inductance because very large potentials can be expressed across it during a strike. This can force currents through alternate paths, which is why we want our main path to Earth to be low reactance.

>Not considering the inductive reactance of your lightning protection
>system can lead to unaccepatble protection of you and your property.

You bet. This is absolutely critical. If your controlled path is highly reactive, huge potentials will develop across it, and alternate paths will be taken. Those alternate paths are typically through your equipment *or you* and are the reason you installed the controlled path in the first place, IE to suppress side flashes and shunt current flows.

>With this in mind, I sure as hell would NOT rely on rebar in my
>foundation in my lightning path to ground. In fact, I would keep my
>system isolated from the rebar as much as possible.

Why? A Ufer ground is many elements in parallel to Earth. It offers a low inductance path, same as any case where multiple inductors are in parallel. A driven rod is the *worst* case. It offers neither paralleled resistance nor paralleled inductance to the path. Like the magnifying glass, it concentrates the energy at one point. The Ufer ground is equivalent to many millions of resistors or inductors in parallel. It spreads the energy, like a diverging lens. It also acts like many *capacitors* in parallel to the surge, and couples it with low reactance to Earth.

The Ufer ground is orders of magnitude less resistive and reactive than soil grains. So its I^2*R losses are orders of magnitude lower than soil grains, and its E=I*X potential drop is orders of magnitude lower than soil grains. With a driven rod, you are depending mostly on the conductance and susceptance of the soil grains in intimate contact with the rod to carry off the surge. With a Ufer ground, the volume of soil in paralleled contact is *vastly* greater, so it's a much better Earth connection.

You've *got* to remember that Earth is the *worst* conductor in your circuit. Whatever you use as an Earth terminal, it is that interface between it and soil grains where the highest resistance and reactance are going to occur. You want to make those as low as possible. A Ufer

ground does that much better than a driven rod. A solid copper sheet the size of the Ufer ground would do it even better, of course, but isn't cost effective.

Cwave is a utility for Windows. If you have a shortwave radio and a Windows compatible sound card, Cwave will convert Morse Code into readable text, in real-time. No TNC or de-modulator is required.

Precise sampling and filtering of the incoming signal is provided, and the converted text is presented in a convenient text editor.

Cwave is shareware, and is available for file transfer at:
ftp.eskimo.com/u/p/pika/cwave

Thank you.

-Pika Software

>seems to be a magic length of eight feet for a ground rod. I was unable to
>come up with an answer, and we didn't find one in the ARRL 1995 Handbook.

There's nothing "magic" about 8 feet. The NEC requires that an effective
Earth terminal have a resistance of less than 25 ohms. Often, an 8 foot
rod can give you that in typical soils. (Often it *can't* also, which is
why multiple paralleled rods are often specified, or something offering
better soil grain contact, like the Ufer ground, is preferred.)

Eight feet gets you down well below the frost line in most of the US. Frozen
soil has very poor conductivity, so short rods won't have much effective
contact area in winter. Very long rods don't buy you much either because
the induced mirror charge under a thundercloud is shallow. The soil at depth
won't have access to that charge to couple with that deep part of the rod,
and the currents would have to flow back up through the resistive Earth to
neutralize the charges. Since that path is shorted by the rod itself, the
value of that portion of the rod is moot.

Eight feet happens to be a reasonable compromise length that's easy to
handle and ship, so it has become a "standard" in the electrical industry.

Depends on what you mean by low resistance, compared to a rod stuck
in dirt, those connections are very low resistance. Consider lightning
as an 8,000 amp constant current source with a forcing voltage in the
millions. Now a little corrosion hardly matters does it? The highest
resistance in the circuit is always the interface between soil grains
and the Earth terminal.

Silly you indeed. Many DX contacts and behaviors are, in my opinion,
detrimental to international goodwill. That's true regardless of
mode, but I have found that those on the digital modes often have
more to say than those using Morse. Now I believe that the nature
of the mode used has a good bit to do with that. Perhaps it is because
they have made the choice to use more than the most rudimentary mode
of information exchange that the information content is higher.

>failed.

sounds like a note the VEC is in order. you can miss 8 on the novice and
6 on the technician test. on the ARRL answer sheet, this is on the bottom of
the page.

we had a VE here that would get up while we're sorting out the paperwork to
get the session setup and start into "instructions" that had to be corrected.
we learned to make sure he had lots to do so we'd not be embarrased by having
the candidates come back with the right answers and he'd start arguing with
them. and he really really really wanted to help in the worst way - too bad
he seemed to be able to only help in the worst way.

not that you can't have brain fade even with the best people...but it doesn't
make for a good session to have such an event occur...

It is power which is energy per unit time, so energy must be power
multiplied by time, as you then correctly applied in your examples.

I have a meeting in Tampa later this week and was wondering if there were any ham stores in the area. Didn't find anything by skimming the QST ads, so I'm turning to the net. Any suggestions?

Thanks,
Brian

[stuff deleted]

: I'm writing from the UK and the references mentioned in the manual are not at
: all easy to come by - I've tried.

: 1) In the case of some of these designs there is a need for a 'ground'. The

The word in the U.K. for 'ground' is 'earth'.

: diagrams in the manual show one end of a wire attached to a metal stake which
: is pushed into the ground, while the other end is attached to the radio set
: itself. Where on the radio set is the free end of the ground wire attached ? Is
: it attached to some kind of socket, or do you somehow attach it to the body of
: the radio set ?

Depends on make/model of radio, often a screw designed just for attaching
a grounding wire.

: 2) When using a 1/2-Rhombic the manual mentions that you feed the two 1/4 wave
: antenna elements from the centre using a 'coax'. What exactly is a 'coax' and
: how does it differ from the antenna wire itself ?

Coax is short for coaxial cable. A shielded cable (ie: conductor
surrounded by insulation, a shield (ie: a conductor), and more
insulation).

: 3) With the 1/2-Rhombic design the manual suggests that if a coax is not
: available to use a 'twisted pair'. What is a twisted pair ? My guess is two
: sheathed copper wires twisted together - but is this too simple a thought ?

Your guess is right re: twisted pair, two insulated wires twisted
together.

: 4) With the 1/2-Rhombic one end of the antenna wire is attached to a
: terminating resistor. The idea of this resistor is to give some
: directionality to the radio wave (I recognise that there is a difference
: between a resistor and an insulator (in the later case, the manual suggests a
: piece of wood or a C-ration spoon)). Does anyone have a good idea of what would
: make a good field expedient resistor ?

On this one you have got me.

* Carbon rod from dry-cell battery (not alkaline) Resistance of these is
quite low (1-5 ohms)

* Pencil "lead", also likely to be too low in resistance to serve as
antenna load.

* Bare wires dipped in container of salt water. Will not withstand DC or
much AC current flow without corrosion. Also likely to corrode by itself,
depending on choice of materials.

* Antenna input of another receiver.

A BRIEF HISTORY OF INTERNATIONAL FOXHUNTING IN THE USA

Despite the fact that some California all-weekend hunts require 300 or 400 miles of driving to find all the transmitters, we still are not considered world-class RDFers by the rest of the world.

In most countries, cars and fuel are relatively expensive, so they aren't likely to be used by the average ham for hobby purposes. Mobile foxhunting can be found only in the USA, England, Australia, and Japan. Everywhere else, it's an on-foot sport, done for its physical fitness benefits. Eastern European schools include it in physical education programs, including hams and non-hams alike.

If you go to a former Soviet Union country, you probably won't hear voices on the two-meter band. You can count the Russian cities with VHF ham repeaters on the fingers of one hand. But wherever you go in that part of the world, there is a good chance you can hear the MCW transmissions of a two-meter foxhunt. Just like other amateur athletes, European and Asian foxhunters like to get together for national and international championships. To this end, a standard set of foxhunt rules has been developed by an International Amateur Radio Union (IARU) committee.

A championship foxhunt course comprises five transmitters in a hilly wooded area. The foxes are spaced such that the roundtrip distance to each one in numbered sequence and back to the start/finish line is 5 to 12 kilometers. Each fox transmits for one minute, in sequence, on the same frequency as the others. A continuous transmitter on a different frequency at the finish line helps hunters find their way home once they have found all five foxes and marked their cards with the unique punches at each one. Hunters must reach the finish line within a specified time period or be disqualified.

To my knowledge, only one formal international foxhunt has ever been held on US soil. It was put on by the Friendship Amateur Radio Society (FARS) of Portland, Oregon in May 1991. FARS is the result of a Sister Cities arrangement between Portland and Khabarovsk, a similar-sized city in Asiatic Russia. It came about after the hams of Khabarovsk invited a delegation of Portland amateurs in 1989 for a series of radiosporting events, including a European/Asian style foxhunt.

Portland reciprocated by putting on the second Friendship Radiosport Games (FRG) in their city two years later. See 73 Amateur Radio Today magazine, "Homing In" for September 1991 and "Showdown in Portland" in November 1991, for firsthand reports on FRG-91. Kevin Kelly N6QAB won the individual foxhunt championship and the USA Red Team (KA7NOO, KC7MZ, WB6JGV) won the team competition.

Victoria, BC Canada, another Khabarovsk sister city, hosted the next FARS gathering in 1993. By now, the Friendship Games were becoming an international event, with hams from the USA, Russia, Japan, and Canada in attendance. See October 1993 "Homing In" for all the details of FRG-93. The USA did not win this time.

This year, it's the Russians' turn to host the Games again. FRG-95 will be August 11-13 in Khabarovsk, with foxhunters from the same four countries attending. The only USA foxhunters competing this time are members of FARS/Portland.

I regularly receive letters and e-mail from organizers of international foxhunts in Europe and Asia who want hams from the USA to participate in their championships. To do that, we are going to need lots of practice and competitive experiences to find suitable amateur athletes. HAMCON/Foxhunt-95 is your opportunity to get involved

Coming in the next message: Details of international foxhunting rules and how they will be adapted to HAMCON/Foxhunt-95.

INTERNATIONAL FOXHUNTING RULES AND ADAPTATIONS FOR HAMCON/FOXHUNT-95

Unlike California-style mobile T-hunts, an international-rules foxhunt is a much more formal event. It takes lots of preparation and on-site staffing to put on.

The 12-page IARU document "Rules for Championships in Amateur Radio Direction Finding" calls for five low-power (0.25 to 1.5 watt) foxes, automatically transmitting in sequence on the same frequency for exactly one minute each. Contestants attempt to locate as many as possible within a two-hour time limit, carrying a card to mark with the unique punches located at each fox. Scoring is determined primarily by the number of transmitters found, and secondarily by elapsed time. Contestants are individually timed. They start at five-minute intervals, each coinciding with the start of fox #1 transmissions. This scatters the contestants on the course to minimize "follow the leader" problems.

Foxhunting is a map and compass exercise as well as an RDF test. Successful hunters pay careful attention to their own location and the bearings to all foxes at all times, plotting them on maps provided by the organizers. They know that if they miss a fox bearing, they must wait four minutes to hear that fox again. They also eye their watches, since exceeding the time limit means disqualification. In other words, it is better to return under the limit with only one fox found than to find all five but take one minute over the limit. Each target transmitter has a distinctive identification, sent continuously in CW or MCW. Even without knowing Morse Code, it is possible to identify the individual foxes.

A prominent red and white prism (flag) is located within two meters of each IARU fox transmitter for visual identification. A homing fox at the finish line transmits continuously on a separate frequency to aid competitors who get lost. Two meter foxes in IARU championships use AM with tone modulation. There is also a separate contest on a different day in all four categories on 80 meters. This makes for a total of eight individual and eight team (country) medal sets awarded in gold, silver, and bronze at a championship meet.

Each country entering a championship match may field one or more teams of three to five contestants each. Team score is a function of the best three individual scores. Team members are not allowed to help one another; course marshalls are alert for violations. Medals are awarded for top team and individual entrants.

Under IARU rules, all competitors use the same venue and the same foxes, but there are separate categories for Seniors (males 18 to 40 years), Juniors (boys under 18), Women (any age--nobody asks!) and "Old Timers."

Only Seniors are required to find all five foxes, in any order. Others need find only four designated foxes; the designated four are different for each category. Transmitters must be at least 400 meters apart, with a total course distance of 4 to 7 kilometers recommended. The first fox must be at least 750 meters from the start.

Rules for HAMCON/Foxhunt-95 will be patterned after the IARU international rules, but will be modified to suit the site and to make it easier for hunters to use RDF gear they have or can make easily. All HAMCON/Foxhunt-95 transmitters will be on two-meter FM with MCW identification. There will not be prisms next to the transmitters.

The total number of foxes, starting interval, and time limit may differ from international rules. This will be determined before the hunt and all hunters will be informed. All hunters must compete as individuals without assistance; it has not been determined if there will be any team categories.

Contestants in all age/sex divisions will be required to find all transmitters at HAMCON/Foxhunt-95. The number and criteria of divisions will be determined after registration is complete. For this reason, you must pre-register at the Southern California Six Meter Club table at the Queen Mary during exhibit hours. No registrations will be accepted at the hunt venue on Sunday afternoon. When you pre-register, you will receive a packet of information including the location of the hunt site.

Next, the World

In countries where this type of hunting is popular, there are area events leading up to national championships. IARU Region 1 (Europe) and Region 3 (Asia/Australia) Championships are alternated with a World Championship such that there is one major championship every year.

The Seventh World Foxhunting Championship was held last September in Sodertelje, Sweden, about 40 miles south of Stockholm. European Foxhunt Championships (for IARU Region 1) are scheduled for September 6-10, 1995 near Bratislava, Slovakia. Australia will host the next IARU Region 3 Championships at Townsville, Queensland, July 15-20, 1996. The next World Championships will be in 1997, country not determined yet.

Competitors from the USA and other countries are welcome at these international championships. There is a "friendship" category for participants who are out of their region or are not national champions and a "promoters" section for newcomers wishing to run the course without being part of the actual competition. Contact the undersigned for more information.

To see what an international foxhunt looks like, be at the T-hunt Forum at HAMCON-95 on Saturday morning, September 2 at 9 AM sharp. There will be slides of recent international competitions and you'll be able to ask questions of hams who were there.

Coming in the next message: Suggestions for RDF equipment to help you get ready for HAMCON/Foxhunt-95.

Subject: !!!TWO CELLULAR PHONES ONE NUMBER!!!

>>Have you ever wondered about having two or more cellular phones
>>on one cellular number?? It is possible. -MacGuyver.

Sure, it's possible. Also a violation of most Agreements between carrier and customer. Also will AUTOMATICALLY get your telephone number TURNED OFF AUTOMATICALLY by your phone company, 'cause when the pair are both "ON" at the same time, the phone company software will shut you down, fearing illegal access to your phone.

Go away with your posts, "MacGuyver." Unwelcome, bogus scam you're running. And you have no knowledge of telecommunication law (or are stupidly ignoring sauch).

I am in the process of setting up a 2m and 70m KLM antenna array. I have selected the Yaesu GB5400 antenna rotator. My question is this.
What is the max angle the antenna would be inclined to during the tracking process? By degree, for example I noted that the rotator control allows a 90 degree angle. Is the antenna ever really used at this angle? The reason for my concern is that mounting location that I have chosen maybe restrict me from using the antenna at 90 degrees. If I located the antenna on a higher mast, say 12 feet this problem would be solved, but it would become more of an eyesore to my neigbhors.

Also, do most Satellites tend to travel in a North/South pattern? Final question, how would this antenna be for use with ground based stations? Would I be better retaining my dualband vertical that I am presently using for gound communication?

Thank you for your reply. Email to HeadShrnkr@aol.com

Satellites have many kinds of orbits. A few of them are near
polar, and thus travel nearly north-south (or vice versa) but even
these can pass near the zenith, the point right overhead.

: Would I be better retaining my dualband vertical that I am presently using
: for gound communication?
Probably.

Requires Motorola or 3rd party RIB (radio interface box) to convert
rs-232 signals to TTL. In addition requires Motorola software for the
series model of radio, in short you need to buy at least the RIB, the
cable from RIB to radio you can build and you may be able to find some
one willing to give you a copy of the software.

Again, one wonder how `serving time' makes up for the violence and
scars the felon has inflicted upon his victims. Maybe conditions of
granting a license to the criminal should be left up the the victims.

Here is what others have to say about ham radio-K1OIK:

From: Warren T Reese <RADIONS@AOL.COM>
Subject: Re: Good ham, bad ham.

Dear List

I kind of hate to say this, but I must express my belief that Ham
Radio is
used for very little these days. It has great potential!

I believe the main purpose it surves is providing entertainment for
its
operators & helping to keep the balance of trade with Japan
unfavorable for
the United States.

Its true that examples can be cited where Amateur Radio is of great
publice
service, but these are very few & very far between.

..Sorry,
Tracy WB6TMY

WHAT IS C W

* It is a unique,intimate,concise and effective communications skill still
employed throughout the world.

* It is the most efficient mode in terms of power required for long-distance communication ,least susecptible to interference,and conserving of the radio frequency spectrum.

* It involves no accent or pronunciation problems,therefore providing a widely understood international language.

* It employs simpler,more reliable and easily maintained equipment than any other communications mode.

* It is an equalizer,negating age,speech impediments and dialectical differences;it provides for ready acceptance of youngsters in an adult enviornment.

* It is the ONLY radio communications mode that is understood readily by both man and machine.

Please note : the above article was submitted for packet by N1CNS
as a reminder that it is a serious and viable means of communication.

>
>. . . .

If I'm recalling my basic physics correctly, there's still a problem with this analysis.

For simplicity (so we won't have to mess with derivatives and integrals), make the assumption that all quantities aren't changing with time. This isn't true, of course, but I don't think it'll change the conclusions:

I = Q/t where I is the current (amperes), Q the charge (couloumbs), and t the time (seconds) for which the charge flows.

P = I^2 * R where P is the power (watts) and R is the resistance (ohms)

W = Pt where W is the energy (joules). Energy isn't power per unit time as stated in the original posting, but energy times time (more accurately, the time integral of the power).

A little manipulation gives that W = (Q^2 * R)/t. This indicates that for a given charge Q, the amount of energy depends on the length of time over which the charge is delivered. The faster it's delivered, the larger the energy.

The example above used one second for the delivery time and gave a result of 10,000 joules. If we use 1 millisecond for the delivery time, the current is 20,000 amperes, the power 10^10 watts, and the energy is 10,000,000 joules. A joule is a watt-second. We've produced 10^10 watts for 1 millisecond. This is the same amount of energy as 10 kW for 1,000 seconds.

I have no idea of whether reinforced concrete will or won't explode if hit by lightning. But if Gary's number of 20 couloumbs is correct, and 1 ms is a ballpark delivery time, you get quite a bunch of energy. Or I don't recall my basic physics right.

>
>thanks for the ideas.

There are numerous cross reference guides. Try and get your hands on as many as you can. Other
common ones are ECG, GE, RCA, and even Radio Shack. I never throw these away, new numbers are
always being added or deleted. The way I figure out whether a part will work or not is by
crossing the number I want to say the NTE number. I look this up and find out what the
parameters are. (ie npn Ic Vbc etc.) Then I check my parts bin for likely suspects and cross
them also. Usually I can find an exact match. Sometimes you can find a functionally equivelant
part with a differnt pinout. If your stuck you can usully twist the leads around to work.
Obviously that won't work with an IC but its amazing what a little ingenuity can do. Generic
chips can often be swapped, but you have to watch the circuit in question. When it comes to
specailty chips your probably out of luck. With transistors, there are dozens of numbers which
have essentially the same characteristics. For instance a 2n2222, 2n4401, 2n3904 are common
npn transistors which are essentially the same. bear in mind that modern silicon transistors
are pretty stable. In a well designed circuit, just about any transistor that as adequate gain,
voltage and current ratings for the circuit should work just fine in 90 plus per cent of the
circuits you are likely to encounter. Well I hope this helps. Stu.....VE7BQy

This sure sounds an awful lot like what the police and media call
cloning cellular phones. Better check with you service provider
before messing with this stuff.

Without giving anything away, I would say that calls coming from the
"same" phone in two different areas are an invitation to a visit from
law enforcement and cellular security folks. It's a standard way
to detect fraud in progress.

2749. ROUTES packet utility & other freeware

Newsgroup: rec.radio.amateur.misc
Date: 1995-08-13 00:00:00 UTC
From: 7134@mgs.com
Message-ID: <9508120003.A4014FN@mgs.com>
Source record: 240503

A program i've written in C and compiled, a utility i call ROUTES, may be of interest to packet bbs sysops and users, so i am posting this announcement on a couple of the ham newsgroups.

ROUTES.EXE: A self-extracting archive. For DOS; there is one version for a 50-line screen and one for the 25-line screen. The utility creates a searchable listing, using packet bulletins you have downloaded off your local ham radio BBS using the 'rh' command (rather than 'r') to get the long-header info. (Sorry, i don't know what the equivalent FBB command is for this. It might be 'v'.) The listing will tell you who forwards to whom, who receives from whom. Will also tell you how many days a message stayed on a BBS en route. You can then search the listing with the search program provided, and it will produce a file based on a search callsign you provide.

Sysops might use this program to keep track of forwarding delays over time; 'users' might use this program to keep track of sysops over time :-)

Someone will say that this information could also be gleaned by simple inspection of the routing headers; however, the program ALSO PRODUCES a comma-delimited file (with all forwarding info, not just a single search-callsign) which can be imported into dBase, Paradox, etc. for very versatile sorts and searches. Find bottlenecks between BBSs with corresponding dates and length of 'holds' or delays. In a dBase IV file i made with the results of the program, i sorted on BBS-a, BBS-b, and date, and got a listing showing a history by date of delays in forwarding from a to b, hundreds of 'pairs' of BBSs. The utility will not of course tell you anything about a message which never got to you. For the latter, you need witchcraft and a big stick :-) not C code.

Most of my motivation for writing this utility was that i wanted to come up with a tool for users to try to demystify the forwarding system; some sysops are not always forthcoming with information, and some are not even up-front about their editorial and censorship policies. So this utility is an intelligence-gathering tool for the user. It can also be a tool for the sysop, of course.

Sysops who are not "downloading" messages on the air, with routing headers, but who rather wish to analyze messages sitting on their hard disk, might be able to create one large file with all the messages combined into one file, by doing the

following dos command: copy *.* packet.txt ; my
utility requires that there be a text file called 'packet.txt'
to work on (a sample is included with my utility); i've used
file sizes up to 800K without my utility coughing and dying on
me; don't know how big the 'packet.txt' file can get before it
would cough and die. Perhaps never, since the text file is
examined line by line and only a few hundred bytes are held
in memory at any given moment.

An earlier version of this program appeared in May on the
CD-ROM "The World of Ham Radio" by Amsoft. However, the
version of ROUTES on the CD does not include the comma-delim
file feature mentioned above.

I'm offering some other original freeware, such as (1) curve-
fitting regression package (stats) for amateur radio (and other)
programmers (how to get an equation to fit a curve in some
engineering handbook); (2) rhombic antenna design hf/vhf;
a set of 3 programs i call 'fromage' which yank all lines
out of Internet email which start with 'From:'. Then you
sort the file, kill duplicates with another program of mine,
but then you have to go in and clean up the unnecessary
garbage like the 'From:' at the beginning and any other
junk that came on the line. Eventually i'll get around to
combining all these functions into one 'big' utility and
include some garbage disposal routines.

Also have some freeware, with C code and author identification
material, for several tsr utilities, one of which lets you
copy PARTS of your screen (the parts you select) to a disk
file, and appends to that disk file every time you invoke
the tsr. I use it to reduce 300K listserver downloads to
10K of excerpts. The problem, if it's a problem, is that
you have to use a simple DOS text editor like Q-edit; the tsr
won't work under Windows, nor in WP for DOS. And 25-line
screen only. I just now checked, and it won't work with
msdos edit. If you need Q-edit, i think i can send that to
you since the signoff blurb makes it look like shareware
(you're the one who's responsible for registering your copy),
and i'm not SELLING anything in this posting. Apparently the
tsr routines are ancient, from the late eighties.

At this point in time i don't have any of this stuff available
at an FTP site; if you want any of these programs, please send
a formatted 1.44, 720, or 360 disk (2 360s if you're wanting
more than a couple of the utilities), mailer, and enough return
postage, to me: Orrin Winton, PO Box 89, Big Sur CA 93920.

Specify which program(s): ROUTES, STAT, RHOMBIC, FROMAGE, TSR,
and Q-EDIT (for use with the tsr screen copier).

Best regards,

WN1Z Orrin

PS: I don't as yet have the ability to read Newsgroups; i posted this via e-mail. So any replies, questions, hate mail or whatever should go to my e-mail address: 7134@mgs.com

A late note: i can send any of this stuff via uuencoded email, in 49K chunks. E-mail me if you want that.

The new Macintosh Ham Test Simulators are HERE!

Novice Ham Test 5.0 SA.sea
Technician Ham Test 5.0 SA.sea
General Ham Test 5.0 SA.sea
Advanced Ham Test 5.0 SA.sea
Extra Ham Test 5.0 SA.sea

The latest versions feature:

HyperCard 2.3 as a stand-alone application (SA) eliminating
the need to have HyperCard. All you need is a Mac with 4
Meg of memory and version System 7 or greater.

Each version 5 Ham Test Simulator has the latest questions
as prepared by the Question Pool Committee.

Each Ham Test Simulator is FREE OF CHARGE and work the
same way as the originals written by Diana, KC1SP.

You may obtain a Ham Test Simulator by mailing me a *FORMATTED
disk (1 per test) and include a Self Addressed and Stamped disk
mailer for the return.

Each Ham Test Simulator is also bundled with a shareware CW
program called MacMorse 1.4 written by Doug, WB0EON.

Also included are a collection of text files that relate an
interesting variety of ideas about the best way to study CW and
prepare for tests.

or warm your phone line and get just the tests:

America On Line - Macintosh Ham Radio Section

>Jeff NH6IL

First, you assume the crime is of a violent nature. Secondly, you suggest that since a crime was committed in the past that a person becomes worthless for any future activities.
You make it sound like anyone who commits a felony should suffer the death sentence.

A 17 year old who takes the neighbors car for a joy ride and gets caught has just committed a felony. We need to execute this individual on the spot. Such misjudgment by a youth must not be tolerated.

Let's get this in perspective people. It's a hobby. It has it's good and not so good people involved with it. If a _CURRENT_ convict can get privileges and access to radio equipment, let them at it. It's a ;lot better then some of the other activities I can think of.

>: make a good field expedient resistor ?
>
>On this one you have got me.

iron wire is often used. at rf is has quite high resistance, but it varies
with wire type, condition (corrosion) etc.

Hello,

This is Beau Barnett, Vice-President of the Young Hams of America. We are looking for a few members. We are directed towards amateur radio operators under 21 years of age. However, anyone is invited and encouraged to join. If you would like some more information about who we are and what we do, please email me at abarnett@snsnet.net . I will get back with you as soon as possible. Thank you and see you on the air.

Beau Barnett, Vice-President, YHA

Jim Lowman (jlowman@netcom.com) wrote:
: My wife is head of the geology/earth science department at a local community
: college, and is studying for her no-code tech. She asked me why there
: seems to be a magic length of eight feet for a ground rod. I was unable to
: come up with an answer, and we didn't find one in the ARRL 1995 Handbook.
:
: Being a geologist, she is curious about this. Can anyone help?

I got tired of listening to all the incorrect answers here and just went
and asked an electrician and also an electrical instructor for Chrysler.

Many years ago most people were using ground rods about 4 ft long, but during
the summer months (in the US at least, June, July, August) the ground would
start to dry up and there wouldn't be a good ground. It was found through
many years of experience that 8 ft will give you a sufficient ground. In
some areas where you can't put a ground rod 8 ft into the ground, you need
to dig a hole and put a metal plate into the ground that the ground rod
attaches to (anyone who was in the military and has driven ground rods
in might have used a metal plate or at least had one with them just in
case they needed it). BTW, this discovery of 8 ft was actually done long
before there was such as thing as an automobile, so you can rule out the
pickup truck story. Also it has nothing to do with RF since RF and
electrical grounds are completely different. You can capacitive couple an
RF ground (a ground that is not even physically tied to the ground itself),
but you can't capacitive couple an electrical ground, you need to physically
tie it to the ground somehow.

You might want to look at the electical codes first and also some of the
history of it, it will probably answer your question. Also I was told that
according to code that the tip of the ground rod needs to be 10 ft below
the surface. Typically you'll find a ground rod installed in a hole a
couple feet deep or in a low spot that essentially makes an 8 ft ground
rod tip actually 10 ft or more below the surrounding surface.

Since I asked him he was going to get me the current code information on
grounding and also about lightning protection (he installs lightning
protection on building in the Detroit, MI area and is our local source
on information for protecting amateur systems from lightning strikes).
I may have more precise info in the future on it.

Ron

Subject: Kenwood Service Stinks

>>Kenwood service absolutely stinks. I dare you to call them up and
>>get a timely HUMAN voice and a RETURN OF A PHONE CALL WITHIN THREE
>>DAYS for a technical question.

Sorry to hear this. I, too, could NOT get a human being on the telephone to talk to out here on the West Coast. And their BBS didn't have Fact Sheets on their equipment.

So...I called the Eastern U.S. Office. A VERY polite woman answered. Was going to patch me to the General Manager, but "He's up on the roof adjusting an antenna."

"Yeah, sure," I thought to myself, as I left my name and telephone number for a callback.

Twenty-five minutes later, the phone rings. It's the Gen Manager - APOLOGIZING to me for not being able to take the call. All my equipment questions were answered, and he even followed up with a letter via Email on Compuserve to me, as well as a mailing of literature.

I did advise him how HORRIBLE the West Coast's voicemail system was - and he had heard it before. If I EVER need any product information from Kenwood, I know where to call.

SB DX @ ALLBBS $OPDX.217
Ohio/Penn DX Bulletin No. 217

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 217
BID: $OPDX.217
August 14, 1995
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 216-237-8208 14400/9600/2400/1200/300 8/N/1

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, K2AJY, WA3RHW, W4ZYT, K4CEF & Southeastern Cluster Group, W4BRE, K0HB, DF4RD, G4BUE & DXNS, IK0DWN, JF1MGI/VK9MG, PA3ERC, VE2ZP/VE9CB, 9K2HN and DL9GOA & DX News Letter for the following DX information.

5A, LIBYA. Dan, W4BRE, reports that all the documentation for the 5A1A operation was sent to the ARRL DXCC Desk on August 10th, from Kiev by the International Youth League of Ukraine. The league should have it within 4-5 days. There is a very good chance there will be a different QSL address for any QSOs made AFTER July 25 by the members of the 5A1A Youth League, which was established in Libya by the Ukrainians. There are presently three Libyan operators active at 5A1A now, Ali, Usaama, and Mufi. 5A1A club station has been heard around 7005 kHz at 2000z and on 20 meters SSB (14207 and 14243) sometimes with Selim, OE6EEG, to help out. One operator, Usaama, has asked to QSL via Box 78665 in Tripoli, but since no QSL cards are printed as of yet for these operators, it is recommended that everyone should wait on sending QSLs until a correct address is determined or verified. Meanwhile, a report of a station signing 5A/G0UCT showed up last Friday on 14020 kHz between 1515 and 1630z. The station is probably a SLIM, but Work First Worry Later (WFWL).

5R MADAGASCAR. Shun, JF1MGI/VK9MG, who is a Doctor of Veterinary Medicine, will be in Madagascar from middle August to the end of September to investigate ecosystems of rare animals, such as Lemur Catta (Ringtail Lemur). His radio activity, with emphasis on RTTY, PACTOR, and lower bands, will be concentrated during the third week of September using the callsign 5R8EU. QSL to his home CBA.

A6, UNITED ARAB EMIRATES. The DX News Sheets (DXNS) report that A61AI and A61AM are two new recently licensed stations.

ASIAN AND AFRICIAN DXPEDITIONS. Ali, ZP5ALI, will be active from Syria as YK1/ZP5ALI from Augsut 22-27th, Egypt as SU1/ZP5ALI from August 28th

to September 3rd and Lebanon as OD5FR from September 4-14th. Operations will be on SSB, 10, 15 and 20 meters. QSL to Fagues Rahal, Avda Pacheco 5257, Asuncion, Paraguay.

CANADIAN SPECIAL PREFIXES. All Canadian Amateurs have been authorized to use special prefixes to celebrate the fiftieth anniversary of the United Nations. From 0000z October 28th through 2359z December 29, 1995, Canadian Amateurs may replace their normal callsign prefixes with the following special prefixes:

Regular	Special Prefix	Regular	Special Prefix
VA2	XL2	VE6	VG6
VA3	XJ3	VE7	XM7
VA7	CJ7	VE8	VC8
VE1	VX1	VE9	VA9
VE2	CG2	VO1	CZ9
VE3	XM3	VO2	CZ0
VE4	VB4	VY1	CK9
VE5	VF5	VY2	CK0

HS2, SAMET ISLANDS (THAILAND). HS7CDI and 7L1MFS will be active on AS-107, located in the Gulf of Thailand North West Group, August 19th and 20th. They will be using the callsign HS2/7L1MFS. Look for them on the usual IOTA frequencies. QSL via 7L1MFS.

KH9, WAKE ISLAND. The DX News Letter reports that Tom, AL7EL, will be active again as KH9/AL7EL, at the end of October.

NEW ENGLAND DX CONVENTION. The New England ARRL DX Convention and Dinner will be held on October 7th, at the Student Center, Worcester State College, 486 Chandler Street, Worcester, MA. Sessions begin at 9:30 AM and run until 1 PM. Topics will appeal to both the experienced DXer and the newcomer. DX forums including presentations describing some recent DX-peditions ; DX Quiz; Pile-Up Contest; QSL card checking; and, displays. The Yankee Clipper Contest Club will also hold their Contest University. Dinner with speaker will be at 2 PM. Hear the latest DX news from New England Vice Director, Warren Rothberg, WB1HBB; DX Specialist Bill Kennamer, K5FUV; and, NE DXAC Rep, Jim Dionne, K1MEM with Hudson DXAC Rep, Bill Hellman, NA2M. Wayne Mills, N7NG will be the dinner speaker who will address current issues involving DX activities. For more information contact Gary G. Young, K2AJY, PO Box 211, Swampscott, MA 01907-0311; 617-592-6934 fax or phone; E-Mail to "g1young@mecn.mass.edu ".

P4, ARUBA. Jack, N2VW, will be active from IOTA SA-036, with the call P40T, from September 5-12th. He will be active in the WAE SSB Contest in the Single/Op category. QSL P40T to N2VW CBA with SASE/SAE with postage or through the ARRL bureau system to N2VW. QSL route is for this 1995 P40T operation only.

QSL ROUTE CHANGED. Hamad, 9K2HN, informs OPDX that he has changed his QSL info from HH2HM/f to the bureau or direct to: Hamad J. Al-Nusif, P.O. BOX:29174, 13152 SAFAT, STATE OF KUWAIT.

S5, SLOVENIA. There was a QSN report on the OPDX Cluster Network indicating Baldur, DJ6SI, was operating as S5/DJ6SI on 7005 kHz around 2230z. There are no other QSNs or details available. (WFWL)

VP5, TURKS AND CAICOS ISLANDS. PA3ERC, PA3EWP, PA3BBP and PA3FQA (four members of the PI4COM Contest Group) will be active from Providenciales Island September 7-26th. The group will be signing /VP5 their own calls and will be active on all bands/modes. They will sign VP5C during the WAE SSB Contest and the CQ WW RTTY Contest. QSL via PA3ERC, R.J. Snieder, Van Leeuwenstraat 137, 2273-VS, Voorburg, Netherlands.

VP9, BERMUDA. Don, W4ZYT, plans on being active from Southampton Parish as W4ZYT/VP9 from September 16-22nd. His activity will be on 40-15 meters, mostly CW.

XV, VIETNAM. Rolf, SM5MX (aka XV7SW), is currently on leave in Stockholm, Sweden. He will be heading back to Hanoi, August 26th. Rolf mentions he is still stuck on fixed frequencies in XV-land, but hopes this will change with the new regulations entering into effect this fall. He also states despite various messages in bulletins regarding low band operation from XV7SW, he was not active on 160-80-40 meters since he couldn't find any antenna wire. This will be one of the things he will be take back with him when he returns to Hanoi. He will also install CW filters on his equipment. The XV7SW QSL cards were printed in Hanoi and he plans to start sending cards out in September.

XW, LAOS. The DX News Sheets report Andreas, DK9LM, (ex-TA1ZE) is in Laos for 20 months and will try to obtain a licence to operate.

YE50, INDONESIA. This will be the last week to work the special event station YE50RI, which is celebrating the 50th anniversary of Indonesian independence. Operations will continue until August 17th. QSL via N6QLQ.

NEW!!!! VOICE OR FAX YOUR DX INFORMATION NOW! A FAX/ANSWERING Machine is now available 24 hours day. The number is 216-237-8208 which shares the same phone line as BARF-80 BBS using a data/fax/phone switch. To access: 1) Dial Number. 2) Wait for first ring (the second ring should be a false ring from the fax/data switch box) and then dial four quick ones ("1111"). (NOTE: Some FAX machines that send single "BEEPS" every second will not have to do this step.) 3) The phone will pick up and after the "BEEP" leave your voice message or FAX.

Excerpts and distribution of The OPDX Bulletin are granted as long as KB8NW/OPDX/BARF80 receive credit. To contribute DX info, call BARF-80 BBS online at 216-237-8208 14400/9600/2400/1200/300 and leave a message with the Sysop or send InterNet Mail to: aq474@cleveland.freenet.edu or send BitNet Mail to: aq474%cleveland.freenet@cunyvm or send PRODIGY Mail to: DFJH48A or send a message via packet to KB8NW @ WA8BXN.OH.USA.NA

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 13/2330Z AUGUST 1995 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 13 AUGUST AND FORECAST FOR 14 AUGUST - 16 AUGUST

1A. SOLAR SUMMARY
Activity: very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 71/6

GOES satellite data for 12 Aug
Daily Proton Fluence >1 MeV: 1.3E+05
Daily Proton Fluence >10 MeV: 1.6E+04
Daily Electron Fluence >2 MeV: 3.7E+08 (moderate)
X-ray background: A2.7
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
14 Aug 15 Aug 16 Aug
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 14 Aug: 71/6

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: quiet to unsettled

Estimated Indices : A K Observed A Index 12 Aug
Learmonth 9 3222 2322
Fredericksburg 14 11
Planetary 12 9

Observed Kp for 12 Aug: 3213 3223
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
14 Aug 12 Quiet to unsettled, with possible isolated active
periods.
15 Aug 10 Quiet to unsettled
16 Aug 15 Quiet to unsettled

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND

DATE LOW MIDDLE HIGH
13 Aug normal normal normal
PCA Event : None.

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
14 Aug normal normal normal
15 Aug normal normal normal
16 Aug normal normal normal

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Observed
DATE T index MUFs at Sydney
13 Aug 27 Near predicted monthly values, with blanketing
sporadic E observed at 05UT and regular spread F observed during
local night.

Predicted Monthly T index for August: 15

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T index MUFs
14 Aug 25 Near predicted monthly values, with spread F during
local night.
15 Aug 25 Near predicted monthly values
16 Aug 25 Near predicted monthly values

COMMENT: Darwin MUFs: slightly depressed, with blanketing sporadic E
observed at 19UT.
Townsville MUFs: near predicted monthly values.
Hobart MUFs: near predicted monthly values, with blanketing sporadic
E observed 14-16UT.

2770. **NEW HAM SURVEY QUESTION STARTED ON 8/13/95**

Newsgroup: rec.radio.amateur.misc
Date: 1995-08-13 00:00:00 UTC
From: wb6siv@lightside.com
Message-ID: <wb6siv-1308951736320001@user49.lightside.com>
Source record: 240524

Yes a new question goes before the ham community on the internet:

"Should one way information bulletins, broadcast on the HF bands, be banned by the FCC?"

This is a hot issue with many ramifications. As many of you already know, this very proposal has been made to the FCC by Fred Maia. It is now part of petition RM-8626. Hams now have the opportunity to express their opinion on this pettition by casting their vote in the HAM POLL on the World Wide Web:

>that offered only a faint glow on the horizon and no audible thunderclap).
>EMP's effect with antennas is, of course, simply reception of an
>electromagnetic pulse, something antennas are designed to do. And,
>of course, a lightning discharge generates an electromagnetic pulse,
>it is, after all, a natural spark transmitter.

And I'll just add my $0.02. My lightning-induced EMP experience came
from a 40-meter dipole strung vertically to a 300-foot television transmitting
tower on top of a mountain. Same thing as Gary's rhombic. I got a spark
across the PL-259 connector whenever there was a lightning strike within
10 miles of the site.

With HF antennas, though, I don't think there is much of an electrocution
hazard. The antenna's self-impedance would only be low at HF frequencies,
so the low-frequency and DC components of the pulse would be attenuated
with any load (namely your body) across the transmission line terminals.
The unattenuated HF components would not cause any physiological

response due to skin effect driving the current flow outside the body through dead skin. Could give you a nasty little RF burn if it arced, however.

From: dddavis@mindspring.com
Message-ID: <dddavis.9.00157AEF@mindspring.com>
Source record: 240528

I have heard of both an 800# and a net site to find out a new call from tne FCC within a few days of taking an exam. Could anyone provide these? Thanks.

2775. OLD SEARS WAYFARER

Newsgroup: rec.radio.amateur.misc
Date: 1995-08-13 00:00:00 UTC
From: Alan_Bessey@mindlink.bc.ca
Message-ID: <76260-808375781@mindlink.bc.ca>
Source record: 240529

If anyone takes offence at the location of this post, please point me in the correct direction.

I have inherited an old(1968-1970 ish) SEARS WAYFARER Muliband receiver, and I am looking for a U.S.A. based parts contact as this set was, I am told, not distributed in Canada, so no listing. The MODEL # is 8227. Everything works fine, but need a couple of controls and a new extendable antenna. Also thinking about hooking it up to a roof mounted antenna to see what I can pick up.

Any help would be appreciated. Please E-Mail imfo.

tks.

>Tracy WB6TMY

Only when disasters are far and few between. Each round of hurricanes that hits the Southeast or Hawaii will produce plenty of examples. Each tornado spotted by ham-spotters working with the NWS produces an example. Every autopatch call reporting an accident produces an example (and one wonders how many of these are done each and every day?). Each round of springtime floods will produce examples. Each major wildland fire in California will produce an example.

That you don't search for these examples doesn't mean they don't exist.

: some IMPORTANT FACTORS or QUESTIONS: Can a person who is blind read a computer
: screen better than they hear, and as fast??????? Can a deaf person hear the
: tones coming out of their radio better than he can read his computer screen,
: and as clear?????

There are many options for blind people who want to use computers.
There is the single line braile screen for text applications, and the braile
mouse.
Seeing as how a computer can take Morse code and make it into screen
text, or a digital mode and make it into a Morse encoded data stream, this
arguement of modes best suited for handicaps is kinda moot.

Burt Fisher (k1oik@ccsnet.com) wrote:
: WHAT IS C W
:
: * It is a unique,intimate,concise and effective communications skill
: still
: employed throughout the world.

No arguement there. Although I would also say spark gap and AM
amatuer use is unique, while maybe not effective. Of course the CW
effectivness is only for a small subset of communications possible. We
don't encode "War & Peace" into it for transmission.

: * It is the most efficient mode in terms of power required for long-
: distance communication ,least susecptible to interference,and
: conserving of the radio frequency spectrum.

Let's live in the present. When you had a choice of voice and CW
this statement was true. Now we have digital modes other then CW that
surpass it in all these respects.

: * It involves no accent or pronunciation problems,therefore providing
: a widely understood international language.

So does all digital modes other then encoded voice. This statement
only refers to SSB or FM in comparison. A very limited comparison.

: * It employs simpler,more reliable and easily maintained equipment
: than any other communications mode.

Sure CW has simple equipment, if you don't want to keep some of your
above listed reasons for it. A small CW rig with a single transistor is not
going to give you the smallest bandwidth, and it's equivalent receiver will
fail in what can be considered good S/N ratios. As soon as you try to include
what you have listed above, you get a rig that is about the same as any
low end digital rig.

:
: * It is an equalizer,negating age,speech impediments and dialectical
: differences;it provides for ready acceptance of youngsters in an adult
: enviornment.

If all your comparing is SSB and FM, you had better move out of the
60's.

: * It is the ONLY radio communications mode that is understood readily
: by both man and machine.

What, you pick up CW via your teeth? You need a machine to get it into human understandable form. A small circuit can translate that further to text. This arguement is not well formed.

These arguements assume that the only modes available are CW, SSB, and FM. Well we've forgotten simple BFSK, which just about anyone with some logic circuits can do. Little hint, BFSK has all the operating characteristics of CW as a transmission mode, but we can compress the data and use simple error correction on the data to make it surpass CW in power used and errors for a given S/N ratio.

I just saw a couple of messages on the local Packetcluster concerning Yaesu's new HF radio - labelled (in the posts) as a FT1000-MP. The messages indicated that it had DSP at one of the IF's, but apart from that there were no other details. Apparently, September QST (when it hits the streets) will have a full-page ad. for it. Anyone else got any further details? (Any ideas/guesses whether current FT1000s will be upgradeable?)

- Darrell.

AM bears
>this out...8)).

Yes, but is a *useable* CW receiver also a *useable* SSB receiver?
Specifically, is a simple non-single-signal receiver, which can be and
is used for CW work all the time, provide adequate performance on SSB,
where the likelihood of a signal in the image band is much much
greater? (Those who have tried this know the answer)

I won't dispute your FM transmitter assertion for now, but what do you
say when asked "How far will it go," or "How come nobody answers me?"

Ma> 73
Ma> Mark Whittington, KE4MAA

Mark, (great name, I might add!) the Radius radio you talk about uses
the 8-pin modular plug to transfer data for programming. Unfortunately,
costs for the software licensing agreement with Motorola, the software
itself, and the hardware make it cost-prohibitive for a one-time use.
(Estimates: about $400+)
My suggestion would be to contact your local Motorola MSS (trade lingo
for Motorola Service Shop) or Radius dealer, and have them do it for you.
The "usual" cost is between $65 and $100 per radio. (Yes, do it more than 4
times, and you've paid for the cost of setting yourself up with the
necessary equipment...)

73 es good luck

CM>73, Cecil, KG7BK, OOTC (not speaking for my employer)

ed the advertising, two cellphones with the same
billing information and same phone number are permitted through a
legitimate practice for GTE MOBILNET _ONLY_! (at least GTE mobilnet in
MY neck of the woods, which is the SF bay area!). Cellular One and it's
related carriers DO NOT permit the use of more than one phone on the
same number or same billing information. current negotiations are
underway, but no word yet on whether an agreement has been reached
between the companies offering this service and Cell-One.

yes, it is a FEDERAL OFFENSE and violation of the tariff laws to perform
such programming procedures on cellphones or use such features without
authorization from your cellular carrier or provider. check with your
carrier for further details...

2786. HAM-server Information

Newsgroup: rec.radio.amateur.misc
Date: 1995-08-14 00:00:00 UTC
From: server@GRAFex.sbay.org
Message-ID: <gate.aZuu0c1w165w@GRAFex.sbay.org>
Source record: 240441
Cross-posted to: rec.radio.amateur.misc,rec.radio.info

Distribution: world
Subject: HAM-server information

HAM-server was devised to allow people without direct internet access a way
to get amateur radio related programs and other information. It is not
directly on the internet, so ftp and telnet is not available.

Most of the files on HAM-server are available via ftp from the various sites
around the world that archive them. That's where I got most of them.

In addition to DOS files, there are some Mac ,Linux, and OS/2 files available.
I'm always on the look out for more (particularly Mac, Linux, OS/2).
See below.

General Information:
==========

There is a daily limit of ALL requests of 3-megs. There is an individual
limit of 1.2-megs. If there are a series of files you want to order,
stretch them out over a few days, rather than ordering all at once.
That way, you are almost assured of getting them all, and you won't be
blocking others from getting their orders filled.

ASCII (text) files are split at about 59,000 bytes. UUENCODED binary files
are split at about 750 lines.

A new INDEX is automatically generated every Sunday.

Ordering Information:
==========

Send an email to:

HAM-server@GRAFex.sbay.org

In the text of the message, place:

HELP
GET /hamradio/INDEX.TXT
QUIT

HELP will send you the HAM-server HELP file. This is processed immediately
for return delivery.

o DOS

If you are using a PC and you do not have UUDECODE, order
UUDECODE.BAS or UUDECODE.C and UUEXE536.ZIP. Compile on your

system then uudecode UUEXE536.ZIP. This is a archive of UUENCODE
and UUDECODE, with documentation. This will work for DOS and OS/2.

o OS/2

I highly reccomend UNZ512X2.EXE. This is InfoZip's ZIP and UNZIP
(plus other stuff). Will dearchive PKUNZIPped files, as well as
UNIX zipped files.

o Macintosh

Most Mac programs are stored in binhex (.HQX). You will need a
utility, such as StuffIt to decode. There are also UUDECODErs
and other de-archivers available. See the index for
/hamradio/macstuff/utility.

o Linux

Use UNZIP.

Some Reasons Why Ordered Files Are Not Received:
==

o If you are ordering from a ccmail system, be advised that ccmail
in its default configuration attempts to automatically UUDECODE
files. If your order is sent in parts, it will hiccup after the
first part. See your system administrator.

o Your return path is incorrect. My bounce mailbox fills up quite
regularly with messages. And, since the path is incorrect, I cannot
contact you to let you know. Try the PING command to check that
the path is open.

o You have spelled the file name incorrectly. Check the INDEX.

o You have entered your request incorrectly. Check the HELP file
for correct syntax.

o The file name has changed since the INDEX was generated. Order a
new INDEX. See the HELP file for the NEWFILES command.

o You sent your order to me personally or in reply to this post.
Orders are only honored when sent to HAM-server@grafex.sbay.org.
That's the way the software works.

YOUR HELP IS NEEDED:
====================

If you have a program you would like placed on HAM-server, you can email it
uuencoded (DOS, Linux, and OS/2) or binhexed (Mac) to

incoming@grafex.sbay.org

This email address is set up to flag me that there is something new that I
need to take care of quickly.

73 de KA6ETB

JH>: $400-600
JH>: > MORE than 2M units and they operate about the same frequency. I understa
JH>: >

JH>: As far as I know the TH28E of Kenwood is able to transmit also in the
JH>: required 154 MHz region. Inside the handheld transceiver one certain diode
JH>: must be removed for that. In case you like to receive more particulair
JH>: information, I am pleased to be sof any assistance.

JH>: Kind regards,

JH>: Stefan

JH>Nice try. The amateur radio equipment is NOT type accepted for use
JH>in the commercial bands. For use in the commercial bands, the radios
JH>MUST be type accepted. Guess your stuck with the higher priced spread

we all know of the legality issues surrounding modification of radios
for out of band transmit. though, contrary to what some like to think,
there are more modified rigs out there than you'd believe. i haven't
owned a single rig that wasn't modified. i have commercial gear as
well, but it's always a handy thing to have around.

i must say that as far as the type acceptance laws go, however, you are
stuck with having to use commercial gear. something you can do,
however, is instead of looking for brand new gear for your commercial
needs, try going to a few swap meets or asking a dealer if he has any
used gear to sell. used from a flea market can be a little risky, but
you could end up spending half, if that, for the gear had it been new.

good luck
greg
kd6ven

2789. Re: US Military Field Expedient Antennas

Newsgroup: rec.radio.amateur.misc
Date: 1995-08-14 00:00:00 UTC
From: Jim Hendrickson <jhendrickson@shell.monmouth.com>
Message-ID: <40m8qa$t8f@shell.monmouth.com>
Source record: 240537
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.homebrew,rec.radio.amateur.misc

The terminating resistor is 600 ohms, non inductive.

2790. Need info on setting Kenwood 690S tone board

Newsgroup: rec.radio.amateur.misc
Date: 1995-08-14 00:00:00 UTC
From: jbs@rti.org
Message-ID: <1995Aug14.023513.26889@rti.rti.org>
Source record: 240538
Cross-posted to: rec.radio.amateur.misc,triangle.radio

A friend has a Kenwood 690S with a TU-8 tone board. He needs to know how to set the dip switches to produce a 107.2hz tone (even better would be a complete discription of how to set it for all the tones it's capable of).

Please e-mail responses to jbs@rti.org.

Thanks!

-joe

2791. Melbourne FL Hamfest Sep 9/10

Newsgroup: rec.radio.amateur.misc
Date: 1995-08-14 00:00:00 UTC
From: wnewkirk@iu.net
Message-ID: <40mhjc$p6d@cc.iu.net>
Source record: 240539

The 30th annual Melbourne (Florida) hamfest will be held September 9th and 10th at the Melbourne Auditorium, 625 E. Hibiscus Blvd. in Melbourne.

Doors open at 9 AM both days. Primary talk in on 146.85 repeater.
Short directions:
From I-95, take US-192 east to US 1.
Turn Left

You can also use a standard 'lead' (graphite core) pencil. Attach a wire at each end where you expose the core (alligator clips?). The amount of resistance will vary with the graphite core length, density, diameter. You can increase the resistance by filing through the pencil more or less in the middle but just don't cut all the way through the core or you've ruined it.. The deeper the cut into the graphite core, the higher the resistance, BUT, you will lower the amount of power it can dissipate at that point. The assumption here is that you have some means of determining the resistance as you file into the core if you are concerned about a specific value such as 600 Ohms.

Your best bet would probably be to go to some hamfests or maybe garage
sales and such and try to find another used one. Then you can have
one for parts to keep the other one going!

2795. Information on Long Delay Echoes?

Newsgroup: rec.radio.amateur.misc
Date: 1995-08-14 00:00:00 UTC
From: herbr@netcom.com
Message-ID: <herbrDDABJw.Eqo@netcom.com>
Source record: 240543

Back in the 1960's, I remember reading a few articles about an unusual HF propagation phenonenon called Long Delay Echoes. This was widely reported and involved hams hearing there own signals echoing back on HF frequencies with about a 2-3 second delay. There was all kinds of speculation about this.

I am wondering if anyone out there is familiar with Lond Delay echoes, as I would be interested in hearing / learning more about this.

Any comments or observations would be apprecaited.

Thanks and 73's/

The following is a QST

Hurricane Erin hits the southeast and brings out the best in
ham radio. The story of Amateur Radio's part in relief efforts
following the storm on Newsline report number 939 coming your way
right now!

(*****
HURRICANE ERIN HITS LAND

Hurricane Erin, the surprise storm of 1995, left a path of devastation in the southeast and a new appreciation of ham radio by many residents of Florida and the gulf coast.

After causing little damage on Florida's east coast, Hurricane Erin ambushed the Florida panhandle. Packing 100 mile per hour winds. Statewide three people died, five were missing at sea and estimates ranged to over two hundred million dollars in property damage.
Radio amateurs in south Florida began twenty four hour emergency HF nets on 75, 40 and 20 meters three days before Erin's arrival on Florida's Atlantic coast. Check-ins included a station operating from the National Hurricane Center near Miami. Position reports and current weather conditions were relayed from across the Caribbean. Bahamian stations could be heard describing the hurricanes furry on 75 meters. But Erin lost strength and was downgraded to a tropical storm shortly after landfall near Vero Beach. Crossing the state, re-entering the gulf and regaining hurricane strength. Forecasters projected gulf Port, Mississippi for a second landfall. Surprising Floridians when Erin slammed into Pensecola. Leaving over 400,000 people without power for up to a week. It was the first time a hurricane hit that area in sixty nine years. And there was plenty of grumbling that there wasn't enough warning.
The National Hurricane Center disputed that and state officials blamed panhandle residents for not taking the warnings seriously enough. But one thing is sure. Amateur radio operators from Key West to the panhandle once again were in the forefront before and after Hurricane Erin did her worst.

Even though Erin was not considered an especially dangerous storm, the hurricane kept disaster officials at full alert as it pushed across Florida's panhandle into Alabama. The American Red Cross put radio amateurs on standby in case conventional communications were lost. As the storm moved on shore, Boyd Bradshaw, KB4GDN, manned a communications post in Birmingham. Bradshaw provided disaster officials with frequent damage updates, using a wide area amateur communications network.

"Most of the information was provided
OUT they didn't have any power

Amateurs in the hurricane's path also provided weather reports, including wind speeds before Erin moved ashore. And, they remained on standby to provide health and welfare communications. Bradshaw sez perhaps the biggest service hams provided was feeding first hand damage reports to the Red Cross, something the agency had difficulty obtaining.

Hurricane Erin is now history, but the National Severe Weather Center says that 1995 may be the most active Caribbean storm season in 21 years. Hams in the southeast and along the gulf coast say that they are prepared for whatever mother nature has in store.

(*****
WOODS INDICTED

A man described as a disgruntled radio repairman for the City of Los Angeles has been indicted on four counts of murder in the first degree with special circumstances for the July 19th killing four supervisors at the city's Piper Tech Center. Three of those killed were hams.
Willie Woods is accused in the shooting deaths of Marty Wakefield, N6BZ, Neil Carpenter, KA6QIB and Anthony Gain, W6KFN and non-ham James Walton.
Anthony Gain was an Advanced class licensee and trustee for a repeater operated by the city who had chosen to continue to work rather than retire. Wakefield was an active DXer and until May had been an ARRL volunteer examiner. Carpenter held an Advanced class license. All four shooting victims also held FCC General Radiotelephone licenses.
Gain, Carpenter and Wakefield were active in the Los Angeles City Amateur Radio Volunteers, a club aimed at helping city employees become licensed, with an eye toward emergency preparedness functions.
Their alleged killer could face death in California's gas chamber if convicted. He has pleaded not guilty on all counts at a hearing on August 3rd.

(*****
SCDCC

Still in Southern California word that the Southern California Digital Coordination Committee, the group that oversees packet radio operations in the area S.C.D.C.C. says that it will stay neutral in the fight over who will coordinate FM repeaters in the region. According to the group, its board of directors has recommend a statement of neutrality be issued regarding two meter coordination bodies. This as a way of staying away from the ongoing political strife on the two meter band. The digital community that share 2 meters is staying away from what might be the coordination disaster of the decade.

(*****
FCC'S HALLER MAY ATTEND REPEATER COORDINATION MEETING

Ralph Haller, N4RH, the Deputy Chief of the FCC's Wireless Telecommunications Bureau, may be at the October 7th National Repeater Coordination Forum in St. Charles Missouri. According to the American Radio Relay League, Haller expressed interest in attending the meeting when President Rod Stafford, KB6ZV met with

him in Washington last month. He is trying to arrange his schedule so he will be able to be there.

(*****
HDTV UPDATE

Also from the nations capital, word that federal regulators agreed to re-examine rules adopted in 1992 say that broadcasters must enter the new digital world. One of the key issues being re-examined by the Federal Communications Commission is if broadcasters will be required to air a minimal amount of high-definition programs?
The TV industry says there should not be such a requirement. The manufacturers of television sets say that broadcasters should have to air such programs during prime time. They say that if broadcasters don't air programs in high definition then people won't have any incentive to go out and buy new high-definition TV sets set manufacturers say.

(*****
SHOCKED ON REMOTE

A Fort Myers, Florida news crew is recovering in a Tampa hospital after almost being electrocuted in a freak accident while on what broadcasters call a remote. WINK-TV reporter Valerie Vance and photographer Dan Nelson were working on a story in the city of Venice when their truck's microwave antenna mast extended into power lines. Vance and Nelson received extensive injuries when they stepped out of the van and touched the ground.

*****
KH6HME CLAIMS NEW 2 METER DX RECORD

KH6HME has done it once again! He has set yet another overwater distance record on the 144 MHz band between Hawaii and Washington state. On July 1st, Paul Lieb operating from his DX location atop Mauna Loa volcano, worked Jim Costello, W7FI, in Woodinville, Washington, near Seattle, a distance of 4333 kilometers.
The contact came about as the result of a tropospheric ducting opening that began June 28 when the 144 dot 170 MHz beacon on Mauna Loa at 13,680 feet above sea level, was heard on the West Coast. QST VHF columnist Emil Pocock, W3EP called the next three days the most widespread Hawaii to West Coast opening ever recorded.
In the early evening of June 30, KH6HME worked WI7Z and N7KSI, both near the coast of Washington, the first ever 144 MHz contacts from that state to Hawaii, and then worked N7AVK, in Oregon. The breakthrough came the next day, at 06:00, when KH6HME worked several Seattle area stations, beginning with W7FI, and was heard by VE7SKA, who could not make himself heard in Hawaii.
Using computer software, the various Seattle area stations calculated who was the farthest from Mauna Loa, and the winner was

W7FI. The record-setting distance was 58 km farther than the six year old record.
Unfortunately, the conditions did not extend to higher bands; KH6HME made 432 MHz contacts with K6QXY and W6SYA, but no others were completed.
The previous record was set between KH6HME and XE2GXQ, on Baja California, a distance of 4276 km, on July 13, 1989.

(*****
PERSEID EVENT

Chris Rand, KB0QQW says via the Internet that the International Association for Astronomical Studies, a not for profit youth astronomy group, will commemorate the 5th annual Perseid Meteor Shower and Summer Campout for The Charles C. Gates Planetarium and The Denver Museum of Natural History at the Evergreen Observatory with an Amateur Radio special event station. Listen in the middle of the General License Class phone bands of 80 meters to 10 meters between the hours of 18:00 zulu on 12 August to 18:00 zulu on 13 August. For a QSL Card, please QSL via Jim Moravec, N0COT, 6474 Kendall St., Arvada, Colorado, 80003. Include a 9.5" x 4" Self Addressed Stamped Envelope.
Also, for those of you in and close to Colorado, we are going to be operating a VHF/UHF Station from the Observatory. Listen on 146.520 and 446.000 Simplex.

(*****
IARU SATELLITE FREQUENCY COORDINATOR

Due to pressure of work and family commitments Bruce Lockhart, SM0TER he asked to withdraw from the post of IARU Satellite Frequency Coordinator. Nominations to fill the vacancy are now being called for and should be submitted to Hans van de Groenendaal, ZS5AKV by fax via his callbook address.

(*****
NEW YLRL LEADERS

The election is over and Marti Brutcher, N6XDS of Redondo Beach, California will be the new president of the Young Ladies Radio League. Vice President will be Carol Hugentober, K8DHK of the greater Cincinnati area. Secretary is Norma Griffin N7GLQ and the Distributing Treasurer elect is Ginger Frazen, AB6WS. Those elected take office on January 1st and will serve a two year term.

(*****
HEARD ISLAND UPDATE

Here is a progress report on the upcoming Heard Island DXpedition. Ralph says that preparation and crating of equipment are in full swing. The antennas are being pre-assembled and repackaged; coax is being cut to the appropriate lengths and

having connectors attached; electrical supply lines are being cut to length; and tools, survival gear, and day to day camp supplies are being crated. Everything will go into a sea container bound for Australia in mid to late August. Ralph adds that he is currently generator shopping, looking for the best combination of quality, power output, and cost. For best flexibility the group needs four units, each capable of around 5 KW output.

(*****
KERMEDIC QSL UPDATE

Also, Frank Smith, AH0W says that of you who worked Kermadec ZL8/G4MFW in May of this year will be pleased to know that the QSL cards are going out very shortly. In fact, many of you will probably have them by the time this newscast goes to air. Frank adds that the QSL manager is KA1JC.

(*****
NEW ORLEANS DX CONVENTION

Finally, a reminder that the 1995 New Orleans DX Convention will hold its forth annual gathering at the Sonesta Hotel in the French Quarter from August 25th to the 26th. Planners are describing it as an all out DX bash and featuring speakers from six recent world class DXpeditions. Also scheduled is on site ARRL DXCC card checking, three technical sessions and a gala banquet featuring the presentation of the DXer of the Year award to Dr. Vince Thompson, K5VT. For more information write to the New Orleans International DX Convention, in care of Michael Mayer, W5ZPA, 5836 Marcia Avenue, New Orleans, Louisiana 70124.

(*****
ARRL HQ STAFF MEMBER HONORED

Our congratulations to ARRL Senior Laboratory Engineer Zack Lau, KH6CP, who has received the John T. Chambers Award of the Central States VHF Society.
Lau received the award at the Society's 29th conference in Colorado Springs on July 29th. He was cited not only for his investigative work on the VHF and UHF bands but also for his help, as an ARRL staff member, in fielding questions from other amateurs. KH6CP/1 is a mainstay in VHF and UHF contests as well, often appearing from New England hilltops. Zack Lau also is widely known for his low-power HF accomplishments, including a number of ARRL Sweepstakes awards in the under-5-watt category.
The award was begun in 1970 when it was given to John T. Chambers, W6NLZ, for his work with KH6UK in the 1960's proving the existence of West Coast to Hawaii tropospheric ducting.
Lau is the 23rd recipient of the Chambers Award since its inception. A graduate of the University of Pennsylvania, he has been licensed since 1978 and an ARRL staff member for nine years.

Hi Cecil, if there are no strings attached to that deal, it is about time! I liken the 1 phone per plan rubbish to Bell charging for "extension" phones in the 60's, or a cable co. charging for addl. sets. It seems perfectly reasonable for me to have my pocket phone on the same number as my car phone. Why would I want to use both at the same time? How would me doing this (if it were legal here) result in additional recurring cost for the cellular carrier?

2800. Pulsed-Bi-Phase Com of K6HH

Newsgroup: rec.radio.amateur.misc
Date: 1995-08-14 00:00:00 UTC
From: dsavel@zen.dedal.fr.net
Message-ID: <40n0gs$890@zen.dedal.fr.net>
Source record: 240548

An article published by K6HH in the June, 1988 issue of the "73 AMATEUR RADIO" described a technique of pulsed Bi-Phase shift-keyed (BPSK) modulation (19.2 KB in a 3kHz bandwith!).

The key element of this system was a very small phase angle deviation and a nanosecond linear transient of the phase modulation.

Some of my friends and I are experimenting this technique and any information would be of great help.

I would like to know if someone has tried this system and/or knows results of such tests. Thanks.

Daniel F5ITU

2801. Northern New Mexico Hamfest, Sept 16

You are invited to attend the Northern New Mexico Hamfest on Saturday, September 16, 1995, 0830 - 1500 at the Glorieta Baptist Conference Center, Glorieta, NM (Interstate 25, Exit 299, 16 miles east of Santa Fe). The hamfest will include commercial vendors, free tailgating, free donuts and coffee, presentations, demonstrations, and prizes including a Ten Tec Scout Mobile HF rig.. There will be arts and crafts for those not interested in amateur radio. Limited accommodations are available.

Admission at the door will be $5.00 and pre-registration by September 8 is $2.50 per person.

In conjunction with the hamfest, there will be examinations for all license classes starting at 1000.

While it would be better if someone in Europe were to answer this, I have NEVER heard of ANY repeater in Europe or the Middle East offering autopatch.

Remember that outside North America the norm is for phone companies to charge for ALL telephone calls (both local and long-distance), so an autopatch without very tight controls could become very expensive very quickly (and thus I suspect the lack of autoptaches).

Two meter repeaters are common enough in Europe (though many require a 1750Hz access tone...).

The file import.bas was supposed to be a "little QBasic
prgram" used to import foreign logs. Instead I included
a chunk of MLog code with the same name. Entertaining but
not very useful. If you need the real thing, let me know.
It's quite small and e-mailable. Hopefully, I'll get
1.17 posted soon.

Jeff I think you hit the nail on the head.

To others:

Actually depends on where you live. I lived in Biloxi, Mississippi
where I first obtained my license...KA5MWD...and SKYWARN was always
being activated. ARES was pretty big there too and having been the
president of the Keesler AFB ARC (K5TYP) for two and a half years
('82-'85) and along with the MS SEC being located next door in
Gulfport you can bet "we" saw a lot of activity...especially the
winter of '82-'83. Great tropo during those storms...

We saw a hurricane (Elena, Sept. 1985) or two (Gloria's remnants, '85
[up here in Mass.]) some tropical storms (Chris, 198?..I forget...82,
83, or 84). We (not just me) saw the Pearl River overflow into
Slidell, Louisiana in 1983 and went there to help out St. Tamminy
Parish officials with communications as well as sandbagging (not the
type of sandbagging where you pull trump at the last minute either);-)
Spotted many a waterspout, funnel cloud, wall cloud, and several
tornados back then too.

From 1985 to 1989 while stationed at Pease Air Force Base, New Hamster
we saw quite a bit of public service activity. Just ask folks like
WB1HBB [Currently ARRL New England Div. Vice-Director), WA1PEL,
WA1WOK, KB1LW (me at the time), K1ACL, W1YFZ (SK), WA1ZCQ, KA1OU,
N1FVL...and a host of others. We kept fairly busy.

I was in New Mexico from 1990 to 1993 and our ARES team was pretty big with the state of New Mexico SAR. There were always search and rescue missions going on. It was pretty easy to get lost on a hunting expedition in the desert. Miles and miles of nowhere. And, very, very common in the mountains. We've even responded to aircraft crash sites...and unfortunately a couple with no survivors.

Not to mention the many T-shirts I have hanging in my closet from participating with communications in marathons, walk-a-thons, Special Olympics, auto races...just to mention a few.

The T-shirts were not renumeration either but for identification at the events...hi hi.

No one can tell me that incidences where amateur radio is of a great public service are very few and very far between. I have personally participated in many, many, many amateur radio related public service events. Maybe not that many in the past two years [because there is an over-abundance of hams here in New England {my opinion}]...but I've had my share around the country. And, at any given moment there is always something going on somewhere in this country...with amateur radio operators providing valuable public service communications.

Garone-teed!

Oh yeah...and what about the VE teams? Are they not doing publice service? Uh...yeah...but very few and very far between?!? uhhh huh!

Cheers!

> Yes, but other peoples packets can fit in between the ones the sender
>is sending slowly. This way packet can approach total usage of the channel.
>Morse code requires that you wait until the sender is finished with his/her
>transmission.

Well, the way packet is currently implemented on HF that's not totally true. Current activity is for the most part pure Aloha, and that only offers 18% utilization of channel capacity under contention. That may be more capacity than pairs of Morse operators use, but it still isn't that great. The TOR modes are more efficient on HF at this time at utilizing the channel, but, like Morse, they can't share it seamlessly with others. And, give the devil its due, Morse operators operating QSK can *interrupt* each other's transmissions between characters while packet and TOR modes have to wait until the end of a frame. Of course frames are short for the TOR modes, 3 characters for AMTOR, so that's not a big deal. It's a bigger deal for packet where frame lengths are typically around 40 characters plus frame overhead.

HF packet as it is currently done is an abomination. The entire system needs to be re-thought and re-engineered. Everything from the very poor modems to the bulky protocols need to be replaced. AX25 wasn't designed for HF conditions, and the Bell 103 standard modems aren't suited to the HF channel either. Don't try to point to current HF packet practice as more efficiently utilizing the channel than Morse, it probably doesn't. Some of the TOR-like modes certainly are better, and packet *could* be better, but AX25 over Bell 103 isn't.

Clover has given us a clue as to what a good HF modem can do, and more efficient packet protocols are possible, even the old Vancouver protocol had less overhead. HF packet might best be served by a token passing protocol, or not, that would take more extensive analysis to determine. For sure CSMA as it's now implemented isn't a good model for HF. Karn's demand access model looks much better for example.

2808. Re: CCR restrictions (was Re: Local Antenna Restrictions)

Newsgroup: rec.radio.amateur.misc
Date: 1995-08-14 00:00:00 UTC
From: rdixon@stargateacs.ohio-state.edu
Message-ID: <40nqgm$iqh@charm.magnus.acs.ohio-state.edu>
Source record: 240556
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.policy,rec.radio.amateur.antenna

I believe that these restrictions aften get applied more out of habit and neglect than intention. I used to serve on a local zoning board, and we had to approve or disapprove any new housing development in our area. One of the things we looked at was the CCRs. To a great extent, these were often just boilerplate that was very repetitive from one development to another, even though they were from different developers. I suspect the developers just use some standard CCRs they get from their own "Developers Association" or whatever, and make a few additions of their own at the end.

The zoning board really had no grounds to force changes in the CCRs unless they were in conflict with the zoning code or master plan or other applicable regulations. So there was nothing I could do to get the antenna restrictions taken out.

I believe the only way to prevent these antenna CCRs in the future is to work with the "Developers Associations" at the national or state levels, and convince them to remove or modify them in their standard boilerplate. Otherwise developers will just continue to take the course of least resistance and use the typical CCR document and not even think much about its content.

2809. Code Training

Newsgroup: rec.radio.amateur.misc
Date: 1995-08-14 00:00:00 UTC
From: dfinley@newshost.aoc.nrao.edu
Message-ID: <40nopr$1rd@orion.aoc.nrao.edu>
Source record: 240557

So you want to learn (or teach) the code?

Most of what you've probably been told about learning Morse Code is wrong. If someone were to try to devise the slowest, most painful and most frustrating way of learning code, they'd have a hard time beating the way hams have been told to do it. The 13- and 20-wpm tests don't have to be a fear-inspiring barrier. The biggest problem is that most people think the road to 13 and 20 wpm starts at 5 wpm. It doesn't. Slow (5-wpm) code is a deadly trap to be avoided at all costs.

Fire up your Web browser and look at the article at URL:

http://hawk.nmt.edu/~bateman/sara/finley.morse.html

This article outlines the Morse training method covered in my article in the May issue of Radio Fun and in a lecture entitled "Morse for Morse-Haters," that I've been giving to ham groups in New Mexico.

If you're in the least interested in gaining code proficiency, or helping someone else gain it, take a look at the article. Learn how to bypass the frustrations and go straight to full HF privileges. This is a free service; nothing is being sold.

Good luck and 73,

Dave Finley, N1IRZ

2810. Dx-mailing list?

Bill-

That is what's called "overhead". It is part of the cost of doing business. Similarly, stores that do over-the-counter business have an investment in counter space and displays, in addition to greater manpower than would be required for phone or mail orders alone.

The point is, that some stores charge a different ratio between an item's cost and shipping/handling charges, to make you think you're getting a better price when you're not.

I don't recall anyone mentioning a specific company that was guilty of this practice. I've only found it when buying photographic equipment. In my few times having stuff shipped from AES, I found their charges quite reasonable, and less than the cost of a trip to Orlando!

In article <40e7be$9hq@newsbf02.news.aol.com>, horrock@aol.com (Horrock) writes...
>When I was selling mail order it was costing me money for
>shipping boxes (and they are not cheap) packing, and labels.
>Moreover, the manpower to pack/label/ship cost money, and then
>there are the losses for C.O.D. packages that are returned.

Yup, no problem there.
The problem occurs when you fill out your order and get to the
shipping/handling line, which says (see table). The table looks like:
$00.00-$10.00 add $05.00
$10.01-$20.00 add $10.00
$20.01-$30.00 add $15.00
etc...
Real shipping costs are based on weight, size, and distance to go of the stuff
shipped... not on the dollar amount. The above is unfortunately what you see
most of the time in mail-order catalogs... nothing but an additional profit
charge. I very often don't order if they do business this way. Often the
mail-order price isn't that great once you add in the additional profit
charges.

The definition of a language is :
The use by human beings of voice sounds, and often written symbols representing these sounds, in organized combinations and patterns in order to express and communicate thoughts and feelings.

Ignoreing the part about "voice" sounds, Morse does seem to match this definition.

A FM transmitter is much more complex. A basic CW transmitter is just an oscilator set to the desired freqeuncy and hooked up to a switch. Any other form of radio communication modulates the carier, thus making it more complex.

2823. SoCal 440 Voice Frequency Taken by Packet!

Newsgroup: rec.radio.amateur.misc
Date: 1995-08-14 00:00:00 UTC
From: jaminge@pb2esac.esac.pacbell.com
Message-ID: <40oes8$9r@gw.PacBell.COM>
Source record: 240571
Cross-posted to: rec.radio.amateur.policy,rec.radio.amateur.misc

If you have used 446.500 MHz, assigned for simplex voice
use in Southern California, in the last year or so, you have
probably discovered it is in regular use by one or more packet
stations. The station I'm aware of is clearly heard all the
way from Cabazon to Long Beach to the San Fernando Valley,
24 hours a day. Here's a short example:

N7QQ-7>NODES: <<UI>>:{CF}QQDX7

At times it gets very active, making the frequency impossible
to monitor without it driving you nuts. I still use it, but
have to use PL encode and decode to avoid hearing the packet
bursts. That is only a stop-gap solution, since it may cause
me to think this frequency is clear, even when another
ham is using it.

I sent a letter to the callbook address listed for N7QQ way
back on in May, asking for information on why the station was
on that frequency. I included my address and telephone number,
but N7QQ never did me the favor of responding at all.

I am posting here to see if there are others who would not like
to see another 440 voice frequency taken away from us. I know
that 446.500 is listed as a packet frequency in the Arizona
band plan, but have also confirmed in various ways that
IT IS STILL RESERVED FOR VOICE USE IN SOUTHERN CALIFORNIA.

This is especially ironic, given the argument put forth here
in the infamous "440 in So. Cal." thread that those who don't
like that situation can just go over to simplex.

There are only 2 simplex voice 440 frequencies listed in the
ARRL books for Southern California. If we don't raise this
issue now, we will surely lose yet another piece of our
vanishing spectrum!

From ARRL Headquarters
Newington CT August 14, 1995
To all radio amateurs

SB SPCL ARL ARLX040
ARLX040 Hurricane Felix update

As of 11:00 AM EDT, Hurricane Felix is 140 miles SSE of Hamilton,
Bermuda, and is moving NNW at 15 mph. Maximum sustained winds are
85 mph. The storm is moving directly towards Bermuda, where the
storm center is expected at 9:00 pm EDT tonight. Felix is a
Category 1 hurricane.

Tony Siese, VP9HK, IARU Liaison for the Radio Society of Bermuda
(RSB), has requested that amateurs avoid transmitting on the
frequency 14.275 MHz, where the Bermuda Net is convening emergency,
hurricane-related operations.

This thread began with the standard "can I take it through security and
then aboard the aircraft" question, and now seems to be migrating to the
biannual "can I use it on the aircraft" question.

The answer to the former is yes, you may be asked to turn the HT on at
security, but you may bring it in. I travel frequently with an HT,
including a trip during the recent Unibomber alert in the LA area. No
problems.

o answer the latter question, in practice you may not operate an amateur
radio from a commercial airliner. Both FAA and FCC regulations restrict
radio operation from an aircraft in a manner that effectively prevents
an amateur radio operation. Note: this includes "just listening". Since

this question is a regular feature here, I have saved the appropriate
statutes from previous posts and append them here,:

Subject: Operation of Ham radios on planes

The use of a transmitter on-board an aircraft is a recurring topic in this
group. With this in mind, I have saved the meat of two posts from April
of 1994 that should provide the difinitive answer. I've lost the
attribution on the posts, but here are the applicable sections of both
part 97 (FCC Regs.) and FAR Part 91 (FAA Regs.)

Begin Quote (FCC Regulations)

97.11 Stations aboard ships or aircraft.

(a) The installation and operation of an amateur station
on a ship or aircraft must be approved by the master
of the ship or pilot in command of the aircraft.

(b) The station must be seperate from and independent of
all other radio apparatus installed on the ship or
aircraft, except a common antenna may be shared with
a voluntary ship radio installation. The station's
transmissions must not cause interference to any
other apparatus installed on the ship or aircraft.

(c) The station must not constitute a hazard to the
safety of life or property. For a station aboard an
aircraft, the apparatus shall not be operated while
the aircraft is operating under Instrument Flight
Rules, as defined by the FAA, unless the station has
been found to comply with all applicable FAA rules.

End quoted text.

Begin Quote (FAA Regulations)

FAR Part 91.21 Portable Electronic Devices

(a) Except as provided in paragraph (b) of this
section, no person may operate, nor may any
operator or pilot in command of an aircraft
allow the operation of, any portable electronic
device on any of the following US-registered
civil aircraft:
(1) Aircraft operated by a holder of an air
carrier operating certificate or an operating
certificate; or
(2) Any other aircraft while it is operated
under IFR.

(b) Paragraph (a) of this section does not apply to --
(1) Portable voice recorders;
(2) Hearing aids;
(3) Heart pacemakers;
(4) Electric shavers; or
(5) Any other portable electronic device
that the operator of the aircraft has
determined will not cause intereference
with the navigation or communication system
of the aircraft on which it is to be used.
(c) In the case of an aircraft operated by
a holder of an air carrier operating
certificate, the determination required by
paragraph (b)(5) of this section shall be
made by that operator of the aircraft on
which the particular device is to be used.
In the case of other aircraft, the
determination may be made by the pilot in
command or other operator of the aircraft.

End quote -- begin interpretation & explanation

Applications
1) If your buddy takes you flying in his PA-28R, you can
get his permission, as Pilot In Command to operate your kilowatt
2m station, if he determines that doing so will not interfere with
his communication & navigation equipment.

2) If you're flying to Florida on AirWorst Airlines, you may NOT
operate any transmitter or receiver ever. The pilot does >NOT<
have the authority to allow such operation. (See FAR 91.21 (c) --
The important definition is "operator" which is NOT PIC [pilot
in charge])

End of saved posts.

HeadShrnkr (headshrnkr@aol.com) wrote:
: I am in the process of setting up a 2m and 70m KLM antenna array. I have
: selected the Yaesu GB5400 antenna rotator. My question is this.
: What is the max angle the antenna would be inclined to during the tracking
: process? By degree, for example I noted that the rotator control allows a
: 90 degree angle. Is the antenna ever really used at this angle? The reason
: for my concern is that mounting location that I have chosen maybe restrict
: me from using the antenna at 90 degrees. If I located the antenna on a
: higher mast, say 12 feet this problem would be solved, but it would become
: more of an eyesore to my neigbhors.

Ah, the Stealth Oscar problem. Satellites do, occasionally, pass directly overhead. Any elevation from 0 - 90 degrees is possible. Remember, though, that an antenna has a beamwidth greater than 0 degrees. If you mis-point it a little, it will still work. How far off you can be depends on the antenna. Subtract 1/2 of the antenna's beam width from 90 degrees to see how high you need to go.

Although I solved part of this problem by using smaller antennas (note, I have not yet actually talked through a high-orbit bird - I don't yet have the 2m preamp or 70cm amp), a good bit of the visual impact can be softened by a can of black spray paint. There have been threads asking about what this does to an antenna's resonance, etc, but I haven't seen a conclusive answer appear. For me, it didn't seem to matter (but my home-brewed antenna's wacky enough that painting it may have even helped).

:
: Also, do most Satellites tend to travel in a North/South pattern? Final

"Most"? Low orbit, yes, I suppose. But the high orbit ones are all over the place.

: question, how would this antenna be for use with ground based stations?
: Would I be better retaining my dualband vertical that I am presently using
: for gound communication?

Running the azmuth rotor around all day to talk to different ground-based stations can be a pain. Unless you need the gain, keep the vertical. You can use it for the low-orbit sat's too.

2837. Binghamton NY Hamfest

Newsgroup: rec.radio.amateur.misc
Date: 1995-08-14 00:00:00 UTC
From: bob93@delphi.com
Message-ID: <xrHhaL2.bob93@delphi.com>
Source record: 240585

Is this Hamfest still on sked for Saturday, Aug 19th? Got "caught"
by a hamfest last year up there that didn't happen, and don't want
to make the same mistake twice, if I can help it. 73, Bob.

2838. ARLX042 TX balloon launch set

Newsgroup: rec.radio.amateur.misc
Date: 1995-08-15 00:00:00 UTC
From: w1aw@arrl.org

SB SPCL @ ARL $ARLX042
ARLX042 TX balloon launch set

ZCZC AX12
QST de W1AW
Special Bulletin 42 ARLX042
From ARRL Headquarters
Newington CT August 15, 1995
To all radio amateurs

SB SPCL ARL ARLX042
ARLX042 TX balloon launch set

The North Texas Balloon Project has scheduled its seventh high altitude balloon experiment carrying Amateur Radio payloads on August 19, 1995. The payload carries a variety of amateur stations that can be used by anyone with a Technician class or higher license.

The launch will be from Clifton, Texas (between Waco and Fort Worth), at approximately 1430 UTC. In the event of inclement weather, the launch will be delayed until the next day, and then to August 26, if necessary.

The morning of the launch an information net will meet on 7.155 MHz.

Approximately two hours after launch, the balloon is expected to reach an altitude of 95,000 feet before it bursts. At this altitude the radius of radio coverage will be about 370 miles in all directions, for a 740-mile communication range. On past missions, there have been QSOs as far as between Corpus Christi, Texas, and Salina, Kansas.

Here's a list of some of the experiments on board:

Two crossband FM voice repeaters, open to all:

Uplink: 147.450 MHz, Downlink: 445.850 MHz;
Uplink: 147.570 MHz, Downlink: 445.970 MHz.

1200 baud AFSK packet telemetry: 144.290 MHz.

Amateur television will be supplied by a 10-watt transmitter on 439.250 MHz, vertically polarized (cable TV channel 60). With a 440-MHz gain antenna and reasonably low noise amplifier, a cable-ready television set tuned to channel 60 should be able to receive an acceptable signal, the sponsors say.

QSLs may be had through KG5OA at his Callbook address.

To all radio amateurs

SB SPCL ARL ARLX043
ARLX043 Oklahoma hams lauded

Oklahoma Senator Don Nickles has entered into the Congressional Record a tribute to volunteers who helped in the aftermath of the April bombing of the Murrah Federal Building in Oklahoma City, including Amateur Radio operators.

Citing an ''outpouring of love, selfless effort, and resources,'' Nickles said the community is ''indebted to those volunteers who created (a) silver lining'' to the dark cloud of the tragedy.

''Specifically,'' Nickles said, ''Amateur Radio operators provided an essential service to rescue operations. Within minutes of the attack, operators were on the scene providing an emergency communication network that allowed for the organization of supplies as well as firemen, policemen, and rescue crews from countless communities.

''Their contribution of 360 hours of service was made possible by donations from electronics companies such as the Oklahoma Community (Communications) Center,'' Nickles said.

Sen Nickles's remarks were published in the August 11, 1995, Congressional Record, thanks in part to the efforts of ARRL Oklahoma Public Information Coordinator Thomas M. Webb, WA9AFM. An article by Webb about Amateur Radio's role in this matter appears in September QST.

Also helping, in Washington, was George Stephens, WB3DAC, who is on the staff of the Senate Republican Policy Committee, of which Sen Nickles is chairman. (Stephens also is president of the Capital Hill Amateur Radio Society, W3USS.)

msl7k@virginia.edu (Melissa Lang) wrote:
> I would like to know where I can hear newsline radio on the hambands. Also,
> where can I get it on the internet.

A few nets carry Newsline on HF. There are also quite a few repeaters that carry it over the weekend. If you contact the producer, Bill Pasternak at BillWA6ITF@aol.com and tell him the area of the state you are in, he may be able to provide the call and/or frequency of one in your area. Any repeater can QST newsline, but only those who financially contribute to Newsline will be on his list.

If you have a TVRO dish, Newsline is also presented in it's entirety as part of "This Week In Amateur Radio" over the Tech-Talk radio network on T301. The producers of that show post up their program contents weekly on this newsgroup. You can get the time, xponder and subcarrier info from their post.

In addition to the weekly posting of the hardcopy here on the newsgroup, there are 3 mailing lists that distribute it via e-mail. One is by the transcriber, Dale WD0AKO, for redistribution purposes, another is automated and is available via a server at netcom, (24 hours after Dale publishes it), and the last one I distribute to individuals, (anywhere between 1-12 hours after Dale sends it to me). E-mail me for further information about text file mailing.

I'm not sure what the penalties are, nor do I know where to find them, but
there are serious penalties for making phoney distress calls. Mayday is
the highest form of a spoken general distress call, and is equal to the
morse code broadband equivelent of S-O-S, or QRRR in the amateur radio
service.

A Mayday requests all who hear it to come and help or contact an emergency
response service to do so. All others should clear the frequency until the
emergency is under control. It should only be used in life or death
situations.

In auto racing it is quite likely that with one wrong move, misjudgement
or equipment failure that someone's life will hang by a thread. But unlike
a real emergency situation, you have fire and medical personnel standing by
in close proximity. Some are even continually monitoring the race and will
proceed to the scene before you hit the TX button. You don't want help
from every listener to the transmission, just those standing by and maybe
the trained pit and track crews if necessary. Your on-site people have
their own radio channels or telephone lines to call for additional services
and hospitals.

From what I understand, using Mayday would be considered to be illegal
under the circumstances. You should use a different code word for that
kind of emergency. Save Mayday for situations you are not prepared
to handle, like if the stands colapse or the fuel depot explodes.

> them.

I don't think it "illegal" to use Mayday. What about "happy mayday"
being sent on May 1st? I agree with the rest with the following
personal interpretation:

VOICE CODE MEANING

MAYDAY SOS IN DISTRESS
PAN PAN GOING TO BE IN DISTRESS
SECURITY TTT DISTRESS AVOIDANCE (WEATHER, NOTAMS, ETC.)

These are my def's from memory and not any offical reference.
Voice and Code are sent three times. The TTT, I believe to be
drawn out. Security is said as if French, (that helps explain
the different spelling).

{I heard a commercial on a FM station sending SOS once. Got my
attention! Seems some advertiser was have an "emergency" close-out
sale!}

Respectfully,
Walt

Bill, "MAYDAY" is an internationally recognized word meaning essentially
"HELP, WE ARE IN SERIOUS TROUBLE WITH LOSS OF LIFE THREATENED" or words
to that effect. If I hear that word uttered on the air, I assume that's
what it means. As a former SCCA member I don't recall any situtation
where MAYDAY would be appropriate, regardless of the radios used. More
likely I'd expect "Aw, used oats!" or whatever a driver with good
Christian manners would say after doing a chicane thru the puckerbrush.*

Hope that helps.

will@epix.net - KD3XR - W F Sill, Tunkhannock, PA

*puckerbrush = any off-road terrain, whether or not vegetated,
into which one travels unintentionally at such a rate or
circumstance as to cause one's navel to pucker.

2846. Antenna T/R Switch?

Newsgroup: rec.radio.amateur.misc

The following is a QST

Hurricane Erin hits the southeast and brings out the best in
ham radio. The story of Amateur Radio's part in relief efforts
following the storm on Newsline report number 939 coming your way
right now!

(*****
HURRICANE ERIN HITS LAND

Hurricane Erin, the surprise storm of 1995, left a path of
devastation in the southeast and a new appreciation of ham radio
by many residents of Florida and the gulf coast.

After causing little damage on Florida's east coast, Hurricane
Erin ambushed the Florida panhandle. Packing 100 mile per hour
winds. Statewide three people died, five were missing at sea and
estimates ranged to over two hundred million dollars in property
damage.
Radio amateurs in south Florida began twenty four hour

emergency HF nets on 75, 40 and 20 meters three days before Erin's arrival on Florida's Atlantic coast. Check-ins included a station operating from the National Hurricane Center near Miami. Position reports and current weather conditions were relayed from across the Caribbean. Bahamian stations could be heard describing the hurricanes furry on 75 meters. But Erin lost strength and was downgraded to a tropical storm shortly after landfall near Vero Beach. Crossing the state, re-entering the gulf and regaining hurricane strength. Forecasters projected gulf Port, Mississippi for a second landfall. Surprising Floridians when Erin slammed into Pensecola. Leaving over 400,000 people without power for up to a week. It was the first time a hurricane hit that area in sixty nine years. And there was plenty of grumbling that there wasn't enough warning.
The National Hurricane Center disputed that and state officials blamed panhandle residents for not taking the warnings seriously enough. But one thing is sure. Amateur radio operators from Key West to the panhandle once again were in the forefront before and after Hurricane Erin did her worst.

Even though Erin was not considered an especially dangerous storm, the hurricane kept disaster officials at full alert as it pushed across Florida's panhandle into Alabama. The American Red Cross put radio amateurs on standby in case conventional communications were lost. As the storm moved on shore, Boyd Bradshaw, KB4GDN, manned a communications post in Birmingham. Bradshaw provided disaster officials with frequent damage updates, using a wide area amateur communications network.

"Most of the information was provided
OUT they didn't have any power

Amateurs in the hurricane's path also provided weather reports, including wind speeds before Erin moved ashore. And, they remained on standby to provide health and welfare communications. Bradshaw sez perhaps the biggest service hams provided was feeding first hand damage reports to the Red Cross, something the agency had difficulty obtaining.

Hurricane Erin is now history, but the National Severe Weather Center says that 1995 may be the most active Caribbean storm season in 21 years. Hams in the southeast and along the gulf coast say that they are prepared for whatever mother nature has in store.

(*****
WOODS INDICTED

A man described as a disgruntled radio repairman for the City of Los Angeles has been indicted on four counts of murder in the first degree with special circumstances for the July 19th killing four supervisors at the city's Piper Tech Center. Three of those

killed were hams.
Willie Woods is accused in the shooting deaths of Marty Wakefield, N6BZ, Neil Carpenter, KA6QIB and Anthony Gain, W6KFN and non-ham James Walton.
Anthony Gain was an Advanced class licensee and trustee for a repeater operated by the city who had chosen to continue to work rather than retire. Wakefield was an active DXer and until May had been an ARRL volunteer examiner. Carpenter held an Advanced class license. All four shooting victims also held FCC General Radiotelephone licenses.
Gain, Carpenter and Wakefield were active in the Los Angeles City Amateur Radio Volunteers, a club aimed at helping city employees become licensed, with an eye toward emergency preparedness functions.
Their alleged killer could face death in California's gas chamber if convicted. He has pleaded not guilty on all counts at a hearing on August 3rd.

(*****
SCDCC

Still in Southern California word that the Southern California Digital Coordination Committee, the group that oversees packet radio operations in the area S.C.D.C.C. says that it will stay neutral in the fight over who will coordinate FM repeaters in the region. According to the group, its board of directors has recommend a statement of neutrality be issued regarding two meter coordination bodies. This as a way of staying away from the ongoing political strife on the two meter band. The digital community that share 2 meters is staying away from what might be the coordination disaster of the decade.

(*****
FCC'S HALLER MAY ATTEND REPEATER COORDINATION MEETING

Ralph Haller, N4RH, the Deputy Chief of the FCC's Wireless Telecommunications Bureau, may be at the October 7th National Repeater Coordination Forum in St. Charles Missouri. According to the American Radio Relay League, Haller expressed interest in attending the meeting when President Rod Stafford, KB6ZV met with him in Washington last month. He is trying to arrange his schedule so he will be able to be there.

(*****
HDTV UPDATE

Also from the nations capital, word that federal regulators agreed to re-examine rules adopted in 1992 say that broadcasters must enter the new digital world. One of the key issues being re-examined by the Federal Communications Commission is if broadcasters will be required to air a minimal amount of high-definition programs?

The TV industry says there should not be such a requirement. The manufacturers of television sets say that broadcasters should have to air such programs during prime time. They say that if broadcasters don't air programs in high definition then people won't have any incentive to go out and buy new high-definition TV sets set manufacturers say.

(*****
SHOCKED ON REMOTE

A Fort Myers, Florida news crew is recovering in a Tampa hospital after almost being electrocuted in a freak accident while on what broadcasters call a remote. WINK-TV reporter Valerie Vance and photographer Dan Nelson were working on a story in the city of Venice when their truck's microwave antenna mast extended into power lines. Vance and Nelson received extensive injuries when they stepped out of the van and touched the ground.

*****
KH6HME CLAIMS NEW 2 METER DX RECORD

KH6HME has done it once again! He has set yet another overwater distance record on the 144 MHz band between Hawaii and Washington state. On July 1st, Paul Lieb operating from his DX location atop Mauna Loa volcano, worked Jim Costello, W7FI, in Woodinville, Washington, near Seattle, a distance of 4333 kilometers.
The contact came about as the result of a tropospheric ducting opening that began June 28 when the 144 dot 170 MHz beacon on Mauna Loa at 13,680 feet above sea level, was heard on the West Coast. QST VHF columnist Emil Pocock, W3EP called the next three days the most widespread Hawaii to West Coast opening ever recorded.
In the early evening of June 30, KH6HME worked WI7Z and N7KSI, both near the coast of Washington, the first ever 144 MHz contacts from that state to Hawaii, and then worked N7AVK, in Oregon. The breakthrough came the next day, at 06:00, when KH6HME worked several Seattle area stations, beginning with W7FI, and was heard by VE7SKA, who could not make himself heard in Hawaii.
Using computer software, the various Seattle area stations calculated who was the farthest from Mauna Loa, and the winner was W7FI. The record-setting distance was 58 km farther than the six year old record.
Unfortunately, the conditions did not extend to higher bands; KH6HME made 432 MHz contacts with K6QXY and W6SYA, but no others were completed.
The previous record was set between KH6HME and XE2GXQ, on Baja California, a distance of 4276 km, on July 13, 1989.

PERSEID EVENT

Chris Rand, KB0QQW says via the Internet that the International Association for Astronomical Studies, a not for profit youth astronomy group, will commemorate the 5th annual Perseid Meteor Shower and Summer Campout for The Charles C. Gates Planetarium and The Denver Museum of Natural History at the Evergreen Observatory with an Amateur Radio special event station. Listen in the middle of the General License Class phone bands of 80 meters to 10 meters between the hours of 18:00 zulu on 12 August to 18:00 zulu on 13 August. For a QSL Card, please QSL via Jim Moravec, N0COT, 6474 Kendall St., Arvada, Colorado, 80003. Include a 9.5" x 4" Self Addressed Stamped Envelope.
Also, for those of you in and close to Colorado, we are going to be operating a VHF/UHF Station from the Observatory. Listen on 146.520 and 446.000 Simplex.

(*****
IARU SATELLITE FREQUENCY COORDINATOR

Due to pressure of work and family commitments Bruce Lockhart, SM0TER he asked to withdraw from the post of IARU Satellite Frequency Coordinator. Nominations to fill the vacancy are now being called for and should be submitted to Hans van de Groenendaal, ZS5AKV by fax via his callbook address.

(*****
NEW YLRL LEADERS

The election is over and Marti Brutcher, N6XDS of Redondo Beach, California will be the new president of the Young Ladies Radio League. Vice President will be Carol Hugentober, K8DHK of the greater Cincinnati area. Secretary is Norma Griffin N7GLQ and the Distributing Treasurer elect is Ginger Frazen, AB6WS. Those elected take office on January 1st and will serve a two year term.

(*****
HEARD ISLAND UPDATE

Here is a progress report on the upcoming Heard Island DXpedition. Ralph says that preparation and crating of equipment are in full swing. The antennas are being pre-assembled and repackaged; coax is being cut to the appropriate lengths and having connectors attached; electrical supply lines are being cut to length; and tools, survival gear, and day to day camp supplies are being crated. Everything will go into a sea container bound for Australia in mid to late August. Ralph adds that he is currently generator shopping, looking for the best combination of quality, power output, and cost. For best flexibility the group needs four units, each capable of around 5 KW output.

(*****
KERMEDIC QSL UPDATE

Also, Frank Smith, AH0W says that of you who worked Kermadec ZL8/G4MFW in May of this year will be pleased to know that the QSL cards are going out very shortly. In fact, many of you will probably have them by the time this newscast goes to air. Frank adds that the QSL manager is KA1JC.

(*****
NEW ORLEANS DX CONVENTION

Finally, a reminder that the 1995 New Orleans DX Convention will hold its forth annual gathering at the Sonesta Hotel in the French Quarter from August 25th to the 26th. Planners are describing it as an all out DX bash and featuring speakers from six recent world class DXpeditions. Also scheduled is on site ARRL DXCC card checking, three technical sessions and a gala banquet featuring the presentation of the DXer of the Year award to Dr. Vince Thompson, K5VT. For more information write to the New Orleans International DX Convention, in care of Michael Mayer, W5ZPA, 5836 Marcia Avenue, New Orleans, Louisiana 70124.

(*****
ARRL HQ STAFF MEMBER HONORED

Our congratulations to ARRL Senior Laboratory Engineer Zack Lau, KH6CP, who has received the John T. Chambers Award of the Central States VHF Society.
Lau received the award at the Society's 29th conference in Colorado Springs on July 29th. He was cited not only for his investigative work on the VHF and UHF bands but also for his help, as an ARRL staff member, in fielding questions from other amateurs. KH6CP/1 is a mainstay in VHF and UHF contests as well, often appearing from New England hilltops. Zack Lau also is widely known for his low-power HF accomplishments, including a number of ARRL Sweepstakes awards in the under-5-watt category.
The award was begun in 1970 when it was given to John T. Chambers, W6NLZ, for his work with KH6UK in the 1960's proving the existence of West Coast to Hawaii tropospheric ducting.
Lau is the 23rd recipient of the Chambers Award since its inception. A graduate of the University of Pennsylvania, he has been licensed since 1978 and an ARRL staff member for nine years.

From: server@GRAFex.sbay.org
Subject: HAM-server Information

Distribution: world
Subject: HAM-server information

HAM-server was devised to allow people without direct internet access a
way
to get amateur radio related programs and other information. It is not
directly on the internet, so ftp and telnet is not available.

Most of the files on HAM-server are available via ftp from the various
sites
around the world that archive them. That's where I got most of them.

In addition to DOS files, there are some Mac ,Linux, and OS/2 files
available.
I'm always on the look out for more (particularly Mac, Linux, OS/2).
See below.

General Information:
==========

There is a daily limit of ALL requests of 3-megs. There is an
individual
limit of 1.2-megs. If there are a series of files you want to order,
stretch them out over a few days, rather than ordering all at once.
That way, you are almost assured of getting them all, and you won't be
blocking others from getting their orders filled.

ASCII (text) files are split at about 59,000 bytes. UUENCODED binary
files
are split at about 750 lines.

A new INDEX is automatically generated every Sunday.

Ordering Information:
==========

Send an email to:

HAM-server@GRAFex.sbay.org

In the text of the message, place:

HELP
GET /hamradio/INDEX.TXT
QUIT

HELP will send you the HAM-server HELP file. This is processed immediately
for return delivery.

o DOS

If you are using a PC and you do not have UUDECODE, order UUDECODE.BAS or UUDECODE.C and UUEXE536.ZIP. Compile on your system then uudecode UUEXE536.ZIP. This is a archive of UUENCODE
and UUDECODE, with documentation. This will work for DOS and OS/2.

o OS/2

I highly reccomend UNZ512X2.EXE. This is InfoZip's ZIP and UNZIP (plus other stuff). Will dearchive PKUNZIPped files, as well as UNIX zipped files.

o Macintosh

Most Mac programs are stored in binhex (.HQX). You will need a utility, such as StuffIt to decode. There are also UUDECODErs and other de-archivers available. See the index for /hamradio/macstuff/utility.

o Linux

Use UNZIP.

Some Reasons Why Ordered Files Are Not Received:
==========

o If you are ordering from a ccmail system, be advised that ccmail in its default configuration attempts to automatically UUDECODE files. If your order is sent in parts, it will hiccup after the first part. See your system administrator.

o Your return path is incorrect. My bounce mailbox fills up quite regularly with messages. And, since the path is incorrect, I cannot
contact you to let you know. Try the PING command to check that the path is open.

o You have spelled the file name incorrectly. Check the INDEX.

o You have entered your request incorrectly. Check the HELP file
for correct syntax.

o The file name has changed since the INDEX was generated. Order a
new INDEX. See the HELP file for the NEWFILES command.

o You sent your order to me personally or in reply to this post.
Orders are only honored when sent to HAM-server@grafex.sbay.org.
That's the way the software works.

YOUR HELP IS NEEDED:
==========

If you have a program you would like placed on HAM-server, you can email
it
uuencoded (DOS, Linux, and OS/2) or binhexed (Mac) to

incoming@grafex.sbay.org

This email address is set up to flag me that there is something new that
I
need to take care of quickly.

From: dbonham@dbonham.seanet.com
Subject: Help Wanted. Possibly for money!

I'm looking for someone who is interested in working on a patented
wildlife monitoring system. How
much money is involved will depend on how well a prototype does at a
national conference for
wildlife biologists in Portland next month.
I have lots of questions, but one is fairly urgent. I need to transmit
at 220 MHz between two fixed,
line-of-sight points, I can use directional antennas at both ends, but
my transmitter output is limited to
10 mW. What's the best general antenna design, and how far away can I
expect to detect an FM
signal that's has a deviation of only 300 Hz?
Let me know if you are interested in working on this project during
1996.
Thanks,
D.Bonham

|> new house, no one is forcing you to live in an area disagreeable to
|> your intended lifestyle, and no one is forcing you to install an outside
|> antenna structure.

Why is it some people have trouble understanding words like "None"?

There are many parts of the west where NO houses are available
where you can put up a tower. None. Zero. Not any. You can't
buy one no matter what "lifestyle" you choose. There are none to buy.
Doesn't matter if you have a lot of money and are willing to pay
$1,000,000 for your house, you still CANNOT PUT UP A TOWER.

Is that a bit more clear?

Now do you understand the problem?

When I moved to Santa Cruz County 10 years ago, I found no (zero)
houses for sale that would permit a tower. Bought a house anyway
(my job was moved there), put up a tower anyway (the house got
tagged), and then took down the tower before putting the house

on the market. I lucked out, there was no fine placed against
my illegal tower, and no neighbors sued me over it, although
one threatened to do so.

When I moved to the Portland area six years ago, I looked at EVERY
house on the market within a "reasonable" commute of the office.
I actually toured over 125 houses personally. Of those 125 houses
that were in our price range and within a reasonable commute distance,
three (3) would allow for ANY form of outdoor antenna AT ALL.

I bought one of the two (2) that would allow the construction of a tower.

2855. Re: 2m 50watt installation in 1990 Buick Century

Newsgroup: rec.radio.amateur.misc
Date: 1995-08-15 00:00:00 UTC
From: freichert@aol.com
Message-ID: <40rdgb$3nc@newsbf02.news.aol.com>
Source record: 240403

We have run many a 100 watt 155 MHz Motorola transmitter in Century and other GM cars of the period with no trouble, while using the broadcast antenna and a coupler as the radiating element. In many cases the bc antenna is directly above and maybe three feet from many of these car's brains in the right kick panel. We use stub matching and an ASP619 coupler so the radio thinks things are ok, but the actual SWR on the antenna is 5 or 6 to 1 at least. Usually the bc radio audio amp pops when the tx is keyed, but have never damaged one.
Most of the problems we have run into are the other way around, the car interfering with the radio, expecially those that have predominantly electronic dashboards. Sometimes the cruise control generates signals too--they are not stable and usually bother one channel at a time--of course with a two meter rig, you will be frequency hopping more, probably, so the potential for problems is greater.
With antenna installed on the roof or trunk, less computer hash is noted.
Bill N9HH

Perhaps a letter writing campaign from a few thousand hams saying that
they are unwilling to buy new homes with CC&Rs that totaly restrict all
antennas would get a response. I am willing to live some restrictions
but most CC&Rs restrict all antennas. I have even seen CC&Rs which
restrict all operation of "shortwave" transmitters and receivers!
So, does anyone know who to write to ?

I've been reading with some amusement the response from Clint Bradford & others about the spam ad from MacGuyver on cell phones.

While I hate to see spam, I also hate to see uninformed hams make pronouncements that are less than correct.

The bottom line is, most cellular service agreements do not prohibit cloning YOUR OWN phone. There is no FCC prohibition.

There IS however, the misinformation from most cellular salesmen that it is illegal (wrong) or not technically feasible (wrong again..) .

Obviously it is in the best interest of the cellular provider to sell you two numbers instead of one.

I might share my personal experience with cloning.

I have a Motorola MicroTac and an Audiovox mobile in my car. I had TWO phone numbers which was a real pain. People had to try to call me both places to get me, and I had TWO phone bills.

I had my phones cloned 2 years ago to the same ESN (electronic serial number). Actually the Audiovox was cloned to the Motorola's ESN.

I then brought the Audiovox to the place I purchased it, and had them reprogram it to the same phone number as my Motorola.

Lest you feel that I was sneaking around my service provider, the place I purchased it from was none other than Southwestern Bell. They had absolutely NO problem doing this for me. They even turned both phones on and called them for me to verify everything was OK !

The CAVEAT:

When you roam out of your home service area BE SURE both phones aren't on at the same time. Fraud watch programs are likely to be unfriendly.

Also, if BOTH phones are on in my home area, both ring, but only the Audiovox completes the call.

THE BOTTOM LINE:

Multiply 24 months x $30 -

A penny saved is a penny earned.

I found a unique way around antenna restrictions that my landlord had at the last apartment I lived in (4 plex). When I first called him and asked for permission to put up an antenna for two meters I was told with a resownding "NO" that I couldn't put up any antenna. I thank him and sadi good bye. Not being one to be eisily daunted I wrote him a letter that proposed the following; I satated the exact type of antenna I wished to put up with carefull attention to gust loading (gee this thing will not blow over in a huricane). I then told him how I would mount the antenna to the building. Once I was sure he had enough information that I was not going to put up an "antenna farm" and that it was structuraly solid' I hit him with the "hook". I told him I would pay a $ 50 non refundable deposit and would pay him $ 5 a month for one square foot of roof area to place my antenna (this would work out to over $ 6,000 a month if it was the rent for my apartment). Being the very greedy person my landlord was I had an adendum for the leese back in three days and the antenna up in less than a week. de N7SZS@KC7Y.AZ.US.NOAM qth Tempe, AZ Jim & 73

I'm looking for someone who is interested in working on a patented wildlife monitoring system. How
much money is involved will depend on how well a prototype does at a national conference for
wildlife biologists in Portland next month.
I have lots of questions, but one is fairly urgent. I need to transmit at 220 MHz between two fixed,
line-of-sight points, I can use directional antennas at both ends, but my transmitter output is limited to
10 mW. What's the best general antenna design, and how far away can I expect to detect an FM
signal that's has a deviation of only 300 Hz?
Let me know if you are interested in working on this project during 1996.
Thanks,
D.Bonham

I recently acquired a whole bunch of QSO cards at an estate auction. They date from the early '50s to the early 70's. Since I got them all for $1 at an estate auction, and I couldn't pass it up. Simply looking through the stamps on them was worth that amount. I haven't removed the stamps yet because there might be some important card-cancel-stamp combinations. Would anyone who frequents this board know if I should go ahead and remove the stamps? There don't seem to be any really rare stamps, but there are a few foreign ones. Since I am posting this as well on the amateur radio board, the man who's cards I have is R.O. Wilson and his station number was W8JRN in Dayton, Ohio. Any help would be appreciated.

To anyone interested. There is a 6m Mid-Michigan net every Sunday at 9:00 p.m. EST on 52.525 Mhz. It is a causal "info" net and there are many interesting people that check in. As regular net-control, I would like to see more people check in. The last few weeks have been slow, averaging 10 check-ins.

Don't feel you may be too far away. I have four receive sights at different points in Lansing and several asst. net-controls. We have regular checkins from down in Ohio and Indiana, and a few times the band has opened to Florida and Texas (although this is rare).

If anyone wants any info on the net or 6m in general, just let me know.

Tnx and 73, Dan Hicks, Jr., KB8UYZ. danjr@voyager.net

Hmmmm.... transmitting an umodulated CW carrier certainly is the easiest
thing to do, but if you actually want to send Morse code, you end up
having to modulate the carrier with Morse coded OOK, a form of AM.

Now, this may not be what you meant to write, but it is what you
did write ;-)

Hi, Ken.

Apparently, someone at the Radio Shack you frequent doesn't read their
mail...an E-Mail memo was sent to all stores 6/30 telling them to pull
that book off of the shelves and destroy them.

BTW...why do you pay such close attention to dates on books and whatnot,
but trust complete strangers with the freshness of the things you eat?
Just wondering...

The Internet DX Mailing List: Operations Manual

Comments or additions should be sent to: lyndon@ve7tcp.ampr.org.

Last updated: June 18, 1995
---

1. Introduction

What is the Internet DX Mailing List?

It is an electronic mailing list dedicated to the discussion of
Amateur Radio DXing. This is the place to exchange tips and
techniques, discuss hardware (rigs, antennas, DSP add-ons), awards,
DX related software, announce upcoming DXpeditions, etc. Anything and
everything pertaining to DX is fair game, with the following
exceptions:

+ Park your flames (and egos) at home. This list is for
constructive commentary. If you don't like the way something is
done, we don't want to hear about it unless you have a positive
and constructive solution or alternative. (Perpetual whiners
will be banished to 160 KHz with a 10 mW transmitter, and will
not be admitted back to the list until they achieve DXCC honour
roll on that band.)

+ Don't send requests for QSL info to the DX mailing list. You can
obtain QSL information via e-mail by sending a message to
qsl-info@aug3.augsburg.edu. Include in the message body the

callsigns you want QSL information for - one callsign per line.
This service is operated by Ray Rocker (WQ5L). Please direct
questions or comments to him at rrrocker@rock.b11.ingr.com.

+ Discussion about contests and contesting should be kept to a
minimum. The CQ-Contest list already provides an excellent forum
for contest related discussions. (To subscribe to CQ-Contest,
send an e-mail request to cq-contest-request@tgv.com)

2. Subscribing, Unsubscribing, and Administrivia

How do I subscribe to or unsubscribe from the list?

A robot maintains the mailing list subscriptions. To subscribe or
unsubscribe you need to send a message to dx-request@ve7tcp.ampr.org.
The body of the message contains commands for the robot. To subscribe
to the list include the following command in the body of your mail
message:

subscribe [address]

To unsubscribe use this command:

unsubscribe [address]

[address] refers to your e-mail address, and is optional. If you
don't specify an explicit address the robot will extract it from your
message. You don't need to specify an explicit address unless your
mail software mashes up your return address, or you're changing your
subscription from a different address than you usually use. If you do
specify an address, leave out the '[' and ']' characters. If you get
stuck you can send a message with only the word HELP in the body.
This will tell the robot to send you help about the commands it
understands.

Mail from the list might not cease immediately after you unsubscribe.
Due to the way mail is handled, you will receive any messages in the
delivery queue (but not yet delivered to you specifically) at the
time you unsubscribe. This should only amount to two or three
messages.

What about these duplicate messages?

Before you panic, check the mail headers. Many complaints about
duplicates are really messages sent to more than one list. If you are
subscribed to both lists (for example, the DX list and the CQ-Contest
list) you will receive two copies of the message - one from each
mailing list. This is not a bug.

Unfortunately, duplicate messages can also be caused by mailers at
the receiving end of the mailing list. I take precautions to prevent
error messages and the like from escaping back to the mailing list,
but you would not believe the amount of totally broken mail software
out there on the Internet these days.

If you receive one or two duplicate messages, ignore them.

If you receive more than one or two duplicate messages, and if you can extract the Received: headers from the message, you can forward copies of the message with the Recieved: headers intact to lyndon@ve7tcp.ampr.org. If you cannot include the Received: headers DON'T forward the messages. I can't debug the problem without them.

DO NOT send mail about the problem to the entire mailing list! The list subscribers cannot do anything to fix the problem, and have probably figured out for themselves that something is wrong.

Is the mailing list archived?

Yes. Archives (starting from Mid-June 1995) are available via anonymous FTP from ftp://ve7tcp.ampr.org/mailing-lists/archives/dx/.

If you don't have FTP capabilities you can retrieve the archives from the mail server. Send a message to listserv@ve7tcp.ampr.org with the command

INDEX DX

in the message body. In return you will receive a message listing all the files available for retrieval using the GET command.

How do I send a message to the list?

It's easy! Just send an e-mail message to: dx@ve7tcp.ampr.org. Your message will be automatically resent to all the mailing list subscribers. Depending on the load on our mail system this could take anywhere from a few minutes to several hours. If you don't see your message within a day or so, send a message to lyndon@ve7tcp.ampr.org (NOT the general submission address) and I will look into the problem.

Here are a few things to keep in mind when sending a message to the list. If everyone follows these guidelines it will help the list operate smoothly.

+ Make sure your subject line is appropriate. If a conversation wanders off the original topic, change the subject line to reflect the new line of discussion.

+ Proofread your message before sending it! Spelling mistakes and poor formatting do nothing to help you get your message across.

+ Keep it short! Many subscribers pay for their e-mail access. Don't include 100 lines of the message you're replying to and then add a three line contribution. Only include as much text as is necessary to establish the context for your reply.

+ Watch your language! This list is gatewayed onto packet radio. Don't say anything that you wouldn't (or shouldn't) say over the air. Anyone violating this rule will be dropped from the list immediately!

+ If someone asks a question, send your answer to them directly. The person asking the question should collect the responses, then send a summary to the list. This helps cut down on unnecessary list traffic.

+ Eschew flamage. If someone sends a flame to the list and you can't bite your tongue, send your flaming reply directly back to the flaming individual, not back to the list. No one wants to pay $1.00 to read these messages (the original flame + your reply). Treat flamers the way you would two-meter repeater jammers - ignore them.

+ Make sure there is something of value in each message you send to the list.

When I reply to a message using my mailer's REPLY command I never see a copy of the message come back from the list. Why?

There are two possible causes. One is that your mailer sends the reply only to the originator of the message. In this case you will have to manually CC the mailing list. The second possibility is that your mail reader is so ancient and broken that it sends replies to the "envelope" from address instead of the From: or Reply-To: header values. If you are in the att.com or microsoft.com domains you want to double check for this second problem. Note that replies sent to the wrong address get filed in the bit bucket.

3. Copyright and Other Legal Muck

Can I reproduce material from the mailing list?

No compilation copyright is asserted over the mailing list. The individual submissions to the mailing list may be (and probably are) covered by national copyright law, and international copyright conventions. When in doubt, consult a lawyer.

If you do reproduce information obtained from the list in a published newsletter please give credit to the message author and the mailing list.

4. Other Related Internet Services

Where can I obtain back issues of the various DX bulletins?

An incomplete archive of DX related bulletins is available via anonymous FTP from ve7tcp.ampr.org:/bulletins/. I add back issues as I come across them. Feel free to contact me if you can help fill in the holes. At some point I hope to set up a WAIS search index that will let you do keyword searches on the bulletins in the archive.

Where can I find out about current solar and propagation conditions?

One of the best sources is Cary Oler's Solar Terrestrial Dispatch. He provides both daily reviews of solar activity and a report of current solar conditions updated every three hours. Sites on the Internet can

obtain these reports by fingering the following addresses:

+ solar@xi.uleth.ca (3-hourly report)
+ aurora@xi.uleth.ca (hourly auroral activity report)

Lyndon Nerenberg - VE7TCP - lyndon@ve7tcp.ampr.org

2883. Amateur Radio: Elmers List Info and Administrivia

Newsgroup: rec.radio.amateur.misc
Date: 1995-08-15 00:00:00 UTC
From: pschleck@gonix.com
Message-ID: <radio/ham-radio/elmers/admin-1-808484417@gonix.com>
Source record: 240461
Cross-posted to: rec.radio.amateur.misc,rec.radio.info,rec.answers,news.answers

Posted-By: auto-faq 3.2.1.3
Archive-name: radio/ham-radio/elmers/admin
Revision: 1.15 07/29/95 09:31:08
Changes: List now in 3 parts, updated archive site info
Posting-Frequency: posted on the 1st and 15th of each month

This administrivia file and the companion Amateur Radio Elmers Resource Directory are intended for non-commercial distribution via Usenet. Any other uses, please E-mail for permission.

In order to standardize the Internet resource notation used in this Directory, I've decided to adopt Uniform Resource Locator (URL) format throughout. In addition to being a straightforward, human-readable, format for specifying File Transfer Protocol (FTP) archives, Gopher and World-Wide Web (WWW) servers, and Usenet newsgroups, it is also amenable to formatting as hypertext links in Hypertext Markup Language (HTML). For example, users viewing this document at designated World-Wide Web Servers (see "How may I obtain the latest copy of the Elmers List?" below) will see all URL's converted to hypertext links on their WWW client. Rather than fumbling with the various conventions of FTP, Gopher, WWW, and Usenet News software, the document or directory referenced by a hypertext link is but one mouse-click (or key-click) away.

Scott Ehrlich has graciously agreed to be a WWW Elmer and provide further information about how to obtain and use WWW client software such as Lynx and Mosaic (see his entry). While I'm happy to incorporate the latest and most popular information-formatting standards into the documents that I maintain, I really can't allow myself to be dragged into the role of a WWW help-desk for all of the Internet. Please understand this when I politely refer you to other Elmers, easily-obtainable on-line documentation, or even local expertise such as resident gurus, consultants, or help-desks at your school, company, or information service provider.

I expect there to be a bit of controversy regarding my adoption of this somewhat radical new standard, especially to many users who can't or won't use WWW. Those users should be assured that I wouldn't have adopted a standard unless it was easily human-readable by those accessing this document as straight ASCII (which is one of the main reasons why the entire Elmers list isn't HTML, MIME, MMDF, or one of many other competing, mostly non-compatible, information formats). The URL format is easily mapped into human FTP, Telnet, Gopher, and Usenet News reader commands. For example:

ftp://ftp.cs.buffalo.edu/pub/ham-radio/README

Anonymous FTP to ftp.cs.buffalo.edu and get the file README under
the /pub/ham-radio directory.

gopher://oes1.oes.ca.gov:5555/

Access the Gopher root page at oes1.oes.ca.gov via non-standard port
5555 (if the standard Gopher port of 70 was used, the ":5555" part
would be replaced by ":70" or most likely not appear at all).

telnet://callsign.cs.buffalo.edu:2000/

Initiate a Telnet (remote terminal) session with
callsign.cs.buffalo.edu via non-standard port 2000 (if the standard
Telnet port of 23 was used, the ":2000" part would be replaced by
":23" or most likely not appear at all).

news:rec.radio.info

Access the rec.radio.info newsgroup on your Usenet newsreader from
your local news server.

URL's that start with:

http:

Are only accessible via WWW client software (which is why almost all
http: URL's in this directory also have corresponding ftp: or gopher:
URL's).

For more information about URL formats, see:

ftp://nis.nsf.net/documents/rfc/rfc1630.txt
http://www.w3.org/hypertext/WWW/Addressing/Addressing.html

Disclaimer: While I have personally confirmed the accuracy of all
URL's through the Lynx WWW client, any referenced documents external
to this document are subject to future changes beyond my control. In
addition, with networks and their administration being what it is,
many services with up-to-date URL's may be temporarily unreachable.
Please consult with your local gurus, consulting staff, or help-desk
to confirm that it's a non-local problem, then ask the Elmer him or
herself (me in the case of URL's which appear outside of individual
entries). The currency and accuracy of URL's should be at least no
worse than that of the Elmers entries themselves (which are each
individually confirmed by me every 2 years, and updated within 1 month
on request of the Elmer).

A Brief Historical Overview:
++++++++++++++++++++++++++

If there is any one constant in the changing state of the communications
art, it is that "Hams" (Amateur Radio Operators) have always been on
the forefront of it. Rumors abound where the term "Ham" came from.
Some of the more amusing are described in the list of Frequently Asked

Questions for this newsgroup.

Regardless of origin of the name, a "Ham" is universally recognizable as one who experiments in radio and communications.

Whether it be constructing a low-power CW radio with vacuum tubes, or designing TCP/IP packet networks, such experimentation has historically spilled over into the mainstream such as was the case with Howard Armstrong, who developed the regenerative oscillator and FM radio, or General Curtis LeMay (W6EZV) who was instrumental in making Single-Sideband the communications standard for the Strategic Air Command (1947-1992, now reorganized into a joint command called USSTRATCOM) and eventually the U.S. Air Force. Although packet-switching techniques originated from DARPA (Defense Advanced Research Projects Agency) and the ARPANet, no one can deny the tremendous influence that amateurs have had in demonstrating the viability of TCP/IP and AX.25 communications via radio links. The efforts of AMSAT (the Amateur Satellite Corporation), including the development of many ham satellites and the low-orbiting Microsats (communications satellites no bigger than a breadbox that use store-and forward packet techniques), have certainly advanced the state-of-the-art in communications, one of the defined purposes of the Amateur Radio Service, as recognized by international treaty.

Since in many cases hams are writing "the book", there is often no "book" or other established reference for a beginner to refer to. Traditionally, information has been passed on from ham to ham via word-of-mouth. Like many of the traditional crafts, a variation of the Master-Apprentice system has emerged, the Elmer-Novice relationship. Called "Elmers" because they are usually older and wiser, having the benefit of many years in the hobby, including several failed projects, and an electric shock or two, they have traditionally been the mainstay of amateur radio, and the source of many new hams, particularly those interested in working on emerging technologies.

Even more importantly, Elmers provided an outlet for the impatient newcomer who wanted "to know everything, and right away." Faced with such a request, a good Elmer will smile and proceed to lead the novice through some project or operating experience. Several hours, days, or weeks later, the novice would have his answers, but would have earned them. Even better, the sense of accomplishment would boost the novice's confidence and nudge him or her down the road to being a model, experienced ham operator.

Many present hams feel that such an experience is missing today. In today's hustle-bustle world, the response to such natural curiosity and desire to learn is, more often than not, "I'm too busy" or "RTFM." As a result, the quality of new hams declines and the knowledge and operating habits they develop in their first formative months and years leave much to be desired. And the very same hams who claim that they "can't understand the new generation" also, in almost the same breath, lament about the "decline of amateur radio."

What is an Elmer today?
++++++++++++++++++++++

An Elmer today is of any age, male or female, who has some expertise and is willing to share it with beginners. Elmers don't even need to be licensed amateurs, just people with knowledge in some area of electronics or communications technology.

What is a Usenet Elmer?
++++++++++++++++++++++

With the ever-widening scope of the Internet, and the amateur radio newsgroups on Usenet, the potential for Elmers to share their knowledge to a wide audience has never been greater. To that end, I maintain a list of such Elmers. Volunteers need only send me their name, E-mail address, and area of expertise. The list has gotten large enough that there should be plenty of suitable examples to model your entry after. If you need some further assistance formatting your entry, drop me a line and tell me a bit about yourself. Ironically, sometimes the best Elmers write to me saying, "I'm not an expert, but..."

I have set up an administrivia mailbox for correspondence related to this list. (elmers-request@gonix.com, the default Reply-To: of this message). I would prefer that all such correspondence be directed to that address. In addition to saving it into a special folder, my incoming E-mail filter will also send you an automated return-receipt. While I can guarantee that I will read all mail sent to elmers-request before the next month's posting of the list, mail sent to pschleck may not necessarily get reviewed for some time (although all E-mail sent to me is certainly read with interest *eventually*).

Those desiring a more extensive list, or who need more specific assistance, are encouraged to contact Rosalie White, WA1STO, Educational Services Manager at the American Radio Relay League, 225 Main St., Newington, CT 06111 or via electronic mail addressed to rwhite@arrl.org.

How may I obtain the latest copy of the Elmers List?
++

There are currently 7 ways of obtaining the Elmers List. Any site at least reachable by Internet E-mail can use options 3 or 4:

1. Usenet News: The latest copy of the list can be found in the companion postings to this message, "Amateur Radio: Elmers Resource Directory [A-*]," "Amateur Radio: Elmers Resource Directory [*-*]," and "Amateur Radio Elmers Resource Directory [*-Z]" (The * represents a wildcard character, as the need to split the list evenly, as well as keep all parts under the 64K message limit for Usenet, requires that I adjust the split occasionally). Since the list is cross-posted to the following newsgroups:

news:rec.radio.amateur.misc
news:rec.radio.info

news:rec.answers
news:news.answers

on the 1st of each month, with an expiration date 6 weeks into the future, there should always be a copy available at most news sites. Check your newsreader documentation for information about reading previously-read articles or articles that are "threaded" to this one. Also complain to your local news administrator (E-mail to "news" or "usenet" on your local host) if your local news server is configured to ignore Expires headers (and thus prematurely delete the articles) in worthwhile, mostly moderated, information newsgroups like those listed above.

2. Anonymous FTP: If your site is directly connected to the Internet, you may retrieve the latest copy via File Transfer Protocol (FTP) from the following sites:

ftp://ftp.cs.buffalo.edu/pub/ham-radio/
ftp://rtfm.mit.edu/pub/usenet/news.answers/radio/ham-radio/elmers/
ftp://ftp.uu.net/usenet/news.answers/radio/ham-radio/elmers/

3. Mailing-List: Since the list is cross-posted to rec.radio.info, the latest copy may be obtained from the mailing-list gateway for that newsgroup (along with many other informational articles about radio) when it is published each month. To subscribe, send E-mail to:

listserv@ucsd.edu

and in the BODY (not the Subject) of the message, write:

subscribe radio-info

The server may not be able to determine your return address. In that case write:

subscribe radio-info (your E-mail address)

You should get an acknowledgement very shortly.

4. Mail-Server: If you don't want to read through the entire gateway of rec.radio.info, or want a copy of the list right away, send E-mail to:

mail-server@rtfm.mit.edu

and in the BODY (not the Subject) of the message, write:

send usenet/news.answers/radio/ham-radio/elmers/admin
send usenet/news.answers/radio/ham-radio/elmers/index
send usenet/news.answers/radio/ham-radio/elmers/list/part1
send usenet/news.answers/radio/ham-radio/elmers/list/part2
send usenet/news.answers/radio/ham-radio/elmers/list/part3
send usenet/news.answers/radio/ham-radio/elmers/diff

and the latest copy of the list should be sent to you E-mail within 24
hours (the mail-server uses batch priority to reduce system demand).

The last three services are experimental. I'm not terribly familiar
with them, and cannot offer much technical support regarding their use.
(I'd appreciate feedback on whether or not you find them useful,
though.)

5. Internet Gopher: The latest copy of the list should be available
from the following Gopher sites:

gopher://jupiter.sun.csd.unb.ca/
gopher://gopher.univ-lyon1.fr/
gopher://ftp.win.tue.nl/
gopher://gopher.win.tue.nl/

see also news:comp.infosystems.gopher

6. World-Wide Web (WWW): The latest copy of the list should be available
from the following WWW sites:

http://www.cis.ohio-state.edu/hypertext/faq/usenet/radio/ham-radio/elmers/top.html
http://www.lib.ox.ac.uk/internet/news/faq/rec.radio.amateur.misc.html

The advantage of reading the Elmers list at these sites via WWW client
software is that all URL's are converted to hypertext links.

see also the newsgroups under comp.infosystems.www.* (I haven't listed
URL's for all of the newsgroups under this hierarchy as there are now
about a dozen of them (!!!).)

7. Wide-Area Information Service (WAIS): The latest copy of the list
should be available from the WAIS server at:

wais://rtfm.mit.edu/usenet

see also news:comp.infosystems.wais

How may I contribute to the Elmers List?
++++++++++++++++++++++++++++++++++++++

By using this resource, you are benefitting the net by obtaining
assistance in the fastest and most efficient way possible. By
volunteering to appear on this list, you are contributing to the good
reputation of the radio-related newsgroups.

Thanks to all the volunteer Elmers, as well as courteous list users, for
making this service a success.

: KX1G Tony
I am a member of the UK RSGB and German DARC. (Plus LM of ARRL.)
Sending funds can be complex. I renew my RSGB with a charge card and send
a check in US dollars to DARC based on the current exchange rate. When I
visited DARC HQ in May, they said that maybe they could take a charge card
in the future. (I did not understand why not now.....they take cards for
ordering supplies....maybe the book store is seperate.) The charge card
slip is written in UK pounds but, based on the days rate, runs agains my
account in US dollars.

How to join? Send for an application form. You could send a postcard
request via their QSL bureau, if you don't have a real address for a
particular country. Addresses for the two above are:

Radio Society of Great Britain, Lambda House, Cranborne Road,
Potters Bar, Herts EN6 3JE UK

Deutscher Amateur-Radio-Club e.V.
Postfach 1155, D-34216 Baunatal GERMANY

Please EMail me directly if you have additional questions. (I have
forgotten the annual dues rates but I can look at old charge slips.
However, the exact amount varies with exchange rates.)

> Is there a usenet newsgroup for buying and selling ham equipment?

Yes, there sure is, David! Rec.radio.swap was specifically set up as the correct place for buying, selling, and trading of radio and related equipment. Rec.radio.amateur.equipment is specifically NOT the correct place for buying selling, and trading of radio and related equipment. It is for the discussion of production amateur radio equipment.

Maybe Jay should post the "Guide to the Personal Radio Newsgroups" once a week, instead of once a month? 8^{)

This message describes the rec.radio.amateur.*, rec.radio.cb,
rec.radio.info, and rec.radio.swap newsgroups, as well as their Internet
mailing list counterparts and complements. It is intended to serve as a
guide for the new reader on what to find where. Questions and comments may
be directed to the author, Jay Maynard, K5ZC, by Internet electronic mail at
jmaynard@admin5.hsc.uth.tmc.edu. This message was last changed on 31 October
1994 to add the discussion of non-Usenet mailing lists and streamline most
of the history discussion, and to change the moderator information for
rec.radio.info.

History
=======

Way back when, before there was a Usenet, the Internet hosted a mailing list
for hams, called (appropriately enough) INFO-HAMS. Ham radio discussions
were held on the mailing list, and sent to the mailboxes of those who had
signed up for it. When the Usenet software was created, and net news as we
now know it was developed, a newsgroup was created for hams: net.ham-radio.
The mailing list and the newsgroup were gatewayed together, eventually.

Over the years, as the net grew, the volume of discussion became
progressively higher. First one by one, and then as part of two
reorganizations, what was once one group became many. In the process,
developments elsewhere on the net were reflected in the groups as they were
created, most notably the change to place all of the ham radio groups in one
hierarchy.

The collection of newsgroups continues to grow as more people join the net,
and as more topics of discussion gain volume, I expect to see more groups be
created as well. This follows what is happening on the rest of the net.

Nearly all of the radio newsgroups have corresponding mailing lists, the
notable exception being rec.radio.swap. There are also a few mailing lists
that don't have newsgroups.

The Current Groups
==================

It's important to post messages to the group that's appropriate for them,
and not to the groups that aren't. The whole idea of having different
```

newsgroups is so that folks who aren't interested in, say, homebrewing, don't have to wade through messages about homebrewing on the way to read about Field Day. Posting appropriately is just good etiquette.

The rec.radio.amateur.misc group is the catchall. It is what rec.ham-radio was renamed to during the first major reorganization. Any message that's not more appropriate in one of the other groups belongs here, from contesting to DX to ragchewing on VHF to information on becoming a ham.

The group rec.radio.amateur.digital.misc is for discussions related to (surprise!) digital amateur radio. This doesn't have to be the common two-meter AX.25 variety of packet radio, either; some of the most knowledgeable folks in radio digital communications can be found here, and anything in the general area is welcome. The name was changed to emphasize this, and to encourage discussion not only of other text-based digital modes, such as AMTOR, RTTY, and Clover, but things like digital voice and video as well. The former group, rec.radio.amateur.packet, was removed on September 21st, 1993. It is obsolete, and you should use .digital.misc instead (or the appropriate new mailing list, mentioned below). The group has .misc as part of the name to allow further specialization if the users wish it, such as .digital.tcp-ip.

The swap group is rec.radio.swap. This recognizes a fact that became evident shortly after the original group was formed: Hams don't just swap ham radio gear, and other folks besides hams swap ham equipment. If you have radio equipment, or test gear, or computer stuff that hams would be interested in, here's the place. Equipment wanted postings belong here too. Discussions about the equipment generally don't; if you wish to discuss a particular posting with the buyer, email is a much better way to do it, and the other groups, especially .equipment and .homebrew, are the place for public discussions. There is now a regular posting with information on how to go about buying and selling items in rec.radio.swap; please refer to it before you post there. To answer a frequently asked question: No, there is no mailing list that goes along with this group. If you can't read Usenet news directly, you're out of luck.

The group rec.radio.amateur.policy was created as a place for all the discussions that seem to drag on interminably about the many rules, regulations, legalities, and policies that surround amateur radio, both existing and proposed. Recent changes to the Amateur Radio Rules (FCC Part 97) have finally laid to rest the Great Usenet Pizza Autopatch Debate - it's now legal to order a pizza on the autopatch, if you're not in the pizza business - as well as complaints about now-preempted local scanner laws hostile to amateurs, but plenty of discussion about what a bunch of rotten no-goodniks the local frequency coordinating body is, as well as the neverending no-code debate, may still be found here.

The group rec.radio.cb is the place for all discussion about the Citizens' Band radio service. Such discussions have been very inflammatory in rec.ham-radio in the past; please do not cross-post to both rec.radio.cb and rec.radio.amateur.* unless the topic is genuinely of interest to both hams and CBers - and very few topics are.

The rec.radio.info group is just what its name implies: it's the place where informational messages from across rec.radio.* may be found, regardless of where else they're posted. As of this writing, information posted to the group includes Cary Oler's daily solar progagation bulletins, ARRL bulletins, the Frequently Asked Questions files for the various groups, and radio modification instructions. This group is moderated, so you cannot post to it directly; if you try, even if your message is crossposted to one of the other groups, your message will be mailed to the moderator, who is currently David Dodell, WB7TPY. The email address for submissions to the group is rec-radio-info@stat.com. Inquires and other administrivia should be directed to rec-radio-info-request@stat.com. For more information about rec.radio.info, consult the introduction and posting guidelines that are regularly posted to that newsgroup.

The groups rec.radio.amateur.antenna, .equipment, .homebrew, and .space are for more specialized areas of ham radio: discussions about antennas, commercially-made equipment, homebrewing, and amateur radio space operations. The .equipment group is not the place for buying or selling equipment; that's what rec.radio.swap is for. Similarly, the .space group is specifically about amateur radio in space, such as the OSCAR program and SAREX, the Shuttle Amateur Radio EXperiment; other groups cover other aspects of satellites and space. Homebrewing isn't about making your own alcoholic beverages at home (that's rec.crafts.brewing), but rather construction of radio and electronic equipment by the amateur experimenter.

Except for rec.radio.swap and rec.radio.cb, all of these newsgroups are available by Internet electronic mail in digest format; send a mail message containing "help" on a line by itself to listserv@ucsd.edu for instructions on how to use the mail server.

All of the groups can be posted to by electronic mail, though, by using a gateway at the University of Texas at Austin. To post a message this way, change the name of the group you wish to post to by replacing all of the '.'s with '-'s - for example, rec.radio.swap becomes rec-radio-swap - and send to that name@cs.utexas.edu (rec-radio-swap@cs.utexas.edu, for example). You may crosspost by including multiple addresses as Cc: entries (but see below). This gateway's continued availability is at the pleasure of the admins at UT-Austin, and is subject to going away at any time - and especially if forgeries and other net.abuses become a problem. You have been warned.

Mailing Lists

In addition to the mailing lists that mirror the Usenet newsgroups, there also are a few that stand alone. These cover specific areas of ham radio, and discussion is focused on just those areas.

The cq-contest mailing list is for discussions of contesting in ham radio. To join, send email with the word "subscribe" on a line by itself to cq-contest-request@tgv.com.

The DX mailing list covers the finer points of DXing. This one is also joined by mailing "subscribe" on a line by itself, this time to

dx-request@unbc.edu.

There's also a VHF mailing list, for VHF operators of the weak signal persuasion. You can join this one be sending "subscribe vhf" on a line by itself to vhf-request@w6yx.stanford.edu.

All of the following mailing lists are sponsored to the Boston Amateur Radio Club, as well as some others of local interest. Thanks to N1IST for the information.

qrp-l: This is the qrp mailing list, previously maintained by Bruce Walker at Think.com. It is for discussions about the design, construction, and use of qrp (low power) radios and related equipment.
arrl-ve-list: This is a one-way list, run by Bart Jahnke of the ARRL VEC, for announcements to VEs and VE teams.
w1aw-list: ARRL bulletins, news, and information
newsline-list: Redistribution of Amateur Radio Newsline
letter-list: Redistribution of the ARRL Letter
fox-list: Fox hunting and Radio Direction Finding
fieldorg-l: ARRL field organization discussions
ham-tech: Technical discussions and questions about Amateur Radio
arrl-exam-list: amateur radio license examinations scheduled in the US and in some foreign areas.

To sign up or inquire about these lists, send mail to listserv@netcom.com with the following in the body (subject is ignored) of the message.
<listname> is the name of the list to subscribe to.
To subscribe: subscribe <listname>
To unsubscribe: unsubscribe <listname>
For more information: help
To post (to the two-way lists), send your message to <listname>@netcom.com

Please do NOT send subscription requests to the mailing lists themselves; that doesn't work very often, and is very annoying to those on the list. Also, please keep your electronic mail address current with any mailing lists you subscribe to, as dealing with returned email is a nuisance for the person maintaining the mailing list.

A Few Words on Crossposting
==========

Please do not crosspost messages to two or more groups unless there is genuine interest in both groups in the topic being discussed, and when you do, please include a header line of the form "Followup-To: group.name" in your article's headers (before the first blank line). This will cause followups to your article to go to the group listed in the Followup-To: line. If you wish to have replies to go to you by email, rather than be posted, use the word "poster" instead of the name of a group. Such a line appears in the headers of this article.

One of the few examples of productive cross-posting is with the rec.radio.info newsgroup. To provide a filtered presentation of information articles, while

still maintaining visibility in their home newsgroups, the moderator strongly encourages cross-posting. All information articles should be submitted to the rec.radio.info moderator so that he may simultaneously cross-post your information to the appropriate newsgroups. Most newsreaders will only present the article once, and network bandwidth is conserved since only one article is propagated. If you make regular informational postings, and have made arrangements with the moderator to post directly to the group, please cross-post as appropriate.

>I need some info on the word Mayday. I need to know if it can be used
>over the air. I'm involved with auto racing and we use the word when
>needed. Somebody said that it is illegal to use it. All we can find
>out is that it cannot be transmitted over Citizens Band. We use FM
>radios.
>Does anybody out there know the answer, or where to look for it.

"Mayday" is the international prosign for a life-threatening emergency ONLY! "Mayday" should only be used on the air on any radio when a life threatening situation exists. Two related prosigns not as well known are: "Securite" for non-life-threatening emergencies (imminent danger, loss of property), and "Pan", for urgent traffic. (I may have Securite and Pan backwards, can someone verify (Gary?) it's been a long time since I did "that kind" of radio work.) :-)

In short, it is illegal to use these words unless the appropriate level of urgency applies. If you have the appropriate level of emergency, use them.

A *VERY* good question..... Masochism?

Most sports could be improved by increased power:

Fishermen! dump your rods and lines, get an ocean-going
supertrawler - all major credit cards and master's certificates accepted.

Hunters! you don't need all those duck/bear/deer guns, simply nuke
the woods! Admittedly, it's harder finding the trophies afterwards, but
you won't have to illuminate them at night. Getting a permit is no
harder than getting a building permit for a nice tower in some places.

Mountaineers! The AV8B outperforms helicopters and can get you on
top fastest! Optional ski-jump accessory increases take-off fuel
capacity. Also a boon to stamp collectors, it can land in places so
exotic that they haven't got a long enough strip for a bizjet. Just
imagine touching-down right outside the only post office on the island
you've been missing!

: Yup, 5 watts and the bottom of the sunspot cycle... Go QRO babe!

Minimum sunspots = Maximum challenge

Nice one, Marc. I find my warped sense of humour makes QRP all the
more fun.

Cheers

: >Moreover, the manpower to pack/label/ship cost money, and then
: >there are the losses for C.O.D. packages that are returned.

: Yup, no problem there.
: The problem occurs when you fill out your order and get to the
: shipping/handling line, which says (see table). The table looks like:
: $00.00-$10.00 add $05.00
: $10.01-$20.00 add $10.00
: $20.01-$30.00 add $15.00
: etc...
: Real shipping costs are based on weight, size, and distance to go of the stuff
: shipped... not on the dollar amount. The above is unfortunately what you see
: most of the time in mail-order catalogs... nothing but an additional profit
: charge. I very often don't order if they do business this way. Often the
: mail-order price isn't that great once you add in the additional profit
: charges.

When I buy mail order, I compare on total price (producted + S&H + tax).
This way you know where you can get the best over all deal. When I bought
my radio, It was out of state, so no tax and they did not charge S&H.
The radio was the same price and the remote mic was about $30.00 cheaper,
I saved a total of about $85.00 with mail order and only had to wait about
5 days.

If the S&H or Tax would have made the price within $5.00-10.00, I would
have bought it local and the Mail order place would have lost my purchase.

Vote with you wallet, they understand that!!.

Don,

Being a new 'HAM', I too wanted to find out my callsign ASAP! There's an 800#, but I don't have it handy at the time. I found my callsign 'on the NET' by using TELNET to: callsign.ualr.edu 2000 (144.167.10.128). This worked out GREAT! I took my test on Saturday, and by Thursday I knew my call! Needless to say, that night after work I was on my way to the local HAM store.....

Its safe to say that no airline will allow you to use a transmitter, but as far as receiver (read scanner) use, it depends on the airline. Some let you use scanners, some don't. I fly Delta and in their Sky magazine they specifically mention that *VHF Scanning receivers* can be used, except for takeoff and landing.

It's is great being a wimp! Anybody can communicate using high power. It's easy, no real challenge other than getting the other guy to talk about something interesting.

QRP is hard during low sun spots. Frankly, it's a bitch; but it's a challenge and it's fun.

I also have an 811 amp with a Ten-Tec Paragon II. When I get lazy, I use the power, when I want a challenge, I use any one of a number of QRP rigs. One big thrill is when I hook up the MJF 9420 SSB rig and call another station. They tell me how good the thing sounds and how good the signal is. Then I tell them what I am running and how much power it is using. They can't beleive it.

It's great to be a wimp!

QRPingly Yours,

Duffy - WB8NUT

>> I think that means a minimum of eight feet.
>I seem to recall that in one pool question, 8 feet was "right" and a longer
>size was marked as "wrong" :-(

Ah, you must mean the question

N4A11 (C)
If you ground your station equipment to a ground rod driven into
the earth, what is the shortest length the rod should be?
A. 4 feet
B. 6 feet
C. 8 feet
D. 10 feet

Now, maybe things have changed since *I* went to school, but when I learned
mathematics, 10 was not less than 8, so that if 8 is an acceptable length
for a ground rod, 10 would not be "the shortest length". D would not
be correct. (If the question read "what is ``an acceptable length'', either
C or D would clearly be correct, given the assumption that it must be at
least 8 feet. But that isn't what it said.)

>There were several such weird questions, such as the one in which saying a
>half-wave dipole radiated sideways was "right" and saying it radiated
>straight up was "wrong".

N9B09 (C)
If the ends of a half-wave dipole antenna point east and west,
which way would the antenna send out radio energy?
A. Equally in all directions
B. Mostly up and down
C. Mostly north and south
D. Mostly east and west

Here I think you're on firmer ground (heh), at least for a dipole several
wavelengths away from the ground (i.e. in free space). I think that a
dipole very near the ground, though, ends up reflecting the downward radiation
up (as a practical matter, at any rate, you consider the ground as part of
the antenna system), so the truly correct answer might well be "mostly up",
which is *not* one of the choices.

>Also a whole bunch on coax impedance
>transformations for odd numbers of quarter wavelengths, where the "right"
>answers were the signs of the reactances (capacitative or inductive) and

>the fact that those reactances were also equal to the characteristic
>impedance of the line was irrelevant and "wrong".

If you mean questions 4BI-6A.1 through 4BI-6D.2, you are quite plainly wrong here. I don't have the time to work out the impedance in each case, but it is *certainly* the case that when the right answer includes a reactance, the *impedance* will never, *ever* be equal to the characteristic impedance of the line. Yes, the questions all ask "what kind of impedance"; a 50 ohm reactance is *certainly * not "the same as" a 50 ohm pure resistive impedance.

>If you want to ace the test, just disengage the brain and quote what the
>pool says is correct.

Considering that you're batting at most 33% here, you evidently forgot to re-engage your brain after taking the test. I quite understand, of course, I've done that sort of thing myself after tests ;-).

>Do you NEED to use an 8 foot rod? I think this is what she was getting at.

It actually depends entirely on the soil in your location. If you're at
the beach, a two-foot rod driven right at the waterline will probably make
fabulous contact with the earth. If you're in the middle of a desert,
8 feet driven into sand probably won't really be adequate. But in most
locations, where the water table is relatively close to the surface but
not actually higher than the surface :-), a two foot rod will do a noticably
less efficient job than an 8-foot rod.

> 73 de Roger, KD4ITU

EXTREMELY unlikely that:

1. A proper installation will hurt anything whatever. I run both
2m FM and HF in a '90 GM and '88 Chrysler vehicle with no problem.

2. Anybody in his right mind will GUARANTEE no problems.

Some cars have been unable to cope with the miniscule amount of RF
involved, and manufacturers have been complete jackasses about their
reaction to the problem -but I don't think yer '90 Buick is on the
offender list.

Never have figured out how anybody would dare sell a car whose electronics
would be smoked by passing a 50kw radio station or having its hood up at a
welding shop - let ALONE a little 100w radio!

Special Bulletin 41 ARLX041
From ARRL Headquarters
Newington CT August 15, 1995
To all radio amateurs

SB SPCL ARL ARLX041
ARLX041 Hurricane Felix 2

As of 1500z, or 11 AM EDT/AST Tuesday, Hurricane Felix is 460 miles
ESE of Cape Hatteras, NC, moving WNW at 14 mph. It remains a
Category 1 hurricane, with maximum sustained winds of 80 mph. Some
increase in strength is expected. If Felix were to take a direct
path for Cape Hatteras, the storm's center would arrive on Wednesday
afternoon, August 16. A hurricane warning is in effect from Little
River Inlet to Chincoteague, VA.

The Hurricane Watch Net is expected to be active on 14325 kHz as the
storm draws to within 300 miles of land. Amateurs are requested not
to transmit on this frequency unless directed to do so by net
control stations. ARRL North Carolina Section Manager Reed Whitten,
AB4W, reports that state emergency management has activated ARES.

Anyone have any info on the pinout for the IC751 microphone?
If so please e-mail to eagle2861@aol.com or eagle28@ix.netcom.com

Thanks in advance,
Jerry

2907. ARLB080 FCC plan considers RFI

Newsgroup: rec.radio.amateur.misc

SB QST @ ARL $ARLB080
ARLB080 FCC plan considers RFI

ZCZC AG47
QST de W1AW
ARRL Bulletin 80 ARLB080
From ARRL Headquarters
Newington CT August 15, 1995
To all radio amateurs

SB QST ARL ARLB080
ARLB080 FCC plan considers RFI

The FCC is considering ''privatizing'' the resolution of radio frequency interference to consumer electronics devices. Under the plan, private repair shops would be used to fix problems ''in the field.''

FCC representatives spelled out the Commission's concept at a meeting in Tampa, saying ''Since it is not feasible for the Commission to attempt to resolve these complaints'' (the most of which come from Citizens Band operation), ''it is our policy not to investigate interference to home electronic equipment. Likewise, we do not offer any protection from interference.''

Over past several years, the FCC has been ''unofficially'' out of the ''retail'' RFI business, and parties who contact the FCC about an interference problem are asked to work together toward a solution.

Depending on what the local repair shop found, either the shop would fix the equipment or, in the case of a violation of FCC rules, the service shop would refer the case back to the FCC for possible FCC action. The question of who would pay was not addressed.

The ARRL, which had responded to an FCC request for input before the meeting, was represented at the meeting by several local volunteer officials, in consultation with ARRL Laboratory Supervisor Ed Hare, KA1CV.

>the value or worth of a mode. It perhaps says something about the
>operator...or tradition...or even perceived wishes of the person on
>the other end of the QSO. But it says nothing about the mode.

Arguing from the other side of the street now are we? I thought it
was already agreed that Morse loses on strictly technical grounds.
That's how we got here, arguing about how the mode is *used*.

>We all know your feelings about Morse. You have every right to like
>it or not and to use it or not. However, it seems your dislike of it
>has lead you to make some inaccurate generalizations and attributions.
>You are confusing "operating habits" with "operating modes".

I thought that was Jeff Herman's specialty. I understand very well
that any mode can be used for any purpose. I also understand that
the characteristics of particular modes will tend to lead usage
in certain directions. For example, no one is likely to attempt
to transmit a binary file in Morse. It *can* be done, using uu-
encoding, but its not likely to happen. The same holds true for
other types of usage, IE the characteristics of the mode influence
how the mode is typically used.

>Those who actually have something to say, will (and do) exchange
>information quite well in any mode...even Morse. Those with little
>of value to say will exchange little information...in any mode. Your
>observation that digital operators have more to say than Morse
>operators is most likely biased by your operating habits. I operate
>both Morse and digital modes and find no such difference.

That then, from your own logic, implies you must have little to say to your contacts. That's a shame, and one of the reasons that I generalized that low information content exchanges serve little purpose in enhancing international understanding and goodwill.

>We also are all aware of your feelings about "DXing".
>You often cite this activity as particularly heinous and
>detrimental to the cause of goodwill. There is no denying that
>certain operating habits of a few DXers are inexcusable, but,
>again, attributing this to DXing in general is grossly inaccurate.
>And considering that some of the worst "offenses" of Dxing take place
>on SSB, it makes no sense to attribute this behavior to the "most
>rudimentary mode"...Morse. Or perhaps you view voice as a rudimentary
>form of communication?

Bringing in SSB is a strawman. I have no intention of defending voice operation in this regard. It is, as you note, often even worse in regards to contributing to a negative image of Dxers than Morse operation. That's because of its nature as a non-text mode. People tend to engage their mouths before engaging their brains. Any text mode, including Morse, tends to lead to a more considered exchange. That's not to condemn voice modes altogether, of course. There are also advantages to that immediacy and intimacy in human exchanges. Voice can often convey nuance in a way that would take pages of text to convey. This too is a function of the ability to convey information content. Information is conveyed not just by the words we use, but also by how we say them.

>It takes two to tango. The vast majority of DX contacts take place
>among willing participants. A polite stateside operator usually lets
>the DX station dictate the course of the QSO...and if they choose to
>have short contacts...or long ragchews...it's their choice. How could
>anyone view this obviously mutually enjoyable activity as being
>"detrimental to international goodwill"?

If that were even remotely universally true, then I'd agree with you that the gaming activities have little detrimental effect. But we both know that it only takes a few bad apples to spoil the barrel, and that it is the squeaking wheel that gets grease. Far too often, it is the inconsiderate operator who gets serviced first, just to get him off the channel. Others then tend to emulate the behaviors that apparently *work*, and we tend to get bedlam on the bands in the form of nasty pileups instead of orderly sequential exchanges.

>One last point you seem to be confused about: The number of words,
>letters, bits transferred, or any other volume-measure does not
>equate to the rate of "information exchange". Ever listen to two hams
>who have nothing to say to each other? After ten minutes of
>saying nothing they spend five more minutes saying goodbye? What
>valuble information have they really exchanged beyond "UR 599--TNX FER
>QSO--73"?

Anyone can, of course, waste the information capacity of the mode they are using. But no one can cram more information into a channel than it will bear. This is an important distinction. For the operator who has something to say, a low information rate channel is a considerable handicap, for those with little or nothing to convey, a high capacity channel serves, but is mostly wasted. So, again, for those with little content to convey, the information capacity of the channel is of little importance. For those with something to convey, the channel needs to have adequate capacity to convey it fluidly.

Gary

>One of the local Phoenix cellular carriers is advertising two or more
>cellular phones on the same number as an available feature.

I think it's a GREAT idea. I would love to have one of the little flip phones
to carry with me, but I am not going to pay another $25+ a month for a
basic service plan (I've got two already!)

If Cellular One would let me get another phone on the same number, I'd
purchase another phone today!

>

Jerry

From my listening - Securite' (TTT) is used a-lot. In fact, this is
the season, listen to Marine Channel 16 for CG Radio Stations or
Coastal ComSta's on HF (2182 KHz). The central east cost should be
active with these radio posts as it is about ready to be slammed.

I've never heard either used in amateur service.

Respectfully,
Walt

>
>The bottom line is, most cellular service agreements do not prohibit
>cloning YOUR OWN phone. There is no FCC prohibition.

Maybe so (I'm not going to state definitely one way or another). It is clearly not intended to be done, as manufacturers build the phones so it is rather difficult to do. They probably have to do this in order to get FCC approval of the phones. One thing is certain: if the providers get their act together, there will be no reason to reason to change the ESN of a phone other than to steal service from someone else's account. Providers most likely would prefer ESNs not be changed for that reason than to prevent "legitimate" use of two phones.

The ESN is used only to detect "fradulent" use. It is not used to address a particular phone when placing or receiving a call. When a call is set up, the phone transmits it's 10-digit number and its ESN. These numbers are cross-referenced in a database to be sure that they are legitimate. This prevents someone from "borrowing" your account by simply setting their phone to your phone number. Of course the crooks are now sufficiently advanced that changing the ESN as well is no problem either, although finding a valid one generally requires monitoring the transmission from someone's phone.

However, if the database had registered two or more ESNs as valid for each phone number, then a customer could use "two phones on one number" without "cloning" them. But the fact remains that the protocol is going to have a hard time dealing with two phones trying to operate at the same time on the same 10-digit number, *same ESN or not*. (Again, changing the ESN has no benefit other than fooling the fraud database). The original specification was very shortsighted. (In another major omission, since portable phones were apparently not foreseen in 1981, there is no provision for "battery saver" monitoring by a phone while it is waiting for calls).

So if this kind of service is set up (same 10-digit number, different ESN), it is still up to the customer to be sure both phones are not powered on at the same time. Many customers are likely to not do that. If both phones are in the same cell, the one with more power and/or a better antenna will generally "win". If they are in different cells, the first one to answer,

or more likely the one with the strongest signal to its cell, could get the call, although the network is probably set up to route calls only to/from one point and would get rather confused trying to set up a call that goes to two places at once. (I believe a voice channel is opened when the phone starts ringing, to ensure that it will still be avaialable when the call is answered. That's one reason why you can't call a cellphone and let it ring for more than a minute or so, that uses airtime that is (as yet) not charged for.)

Another way to set up a "two phones, one number" account would be to use seperate 10-digit numbers for each, but configure the network software so that (1) only one can be active at a time, and (2) calls for one are "aliased" to the other as well. The 10-digit number for the secondary phone needn't be one allocated for landline use, since it is never used over the landline anyway. But it probably would be so the second phone could be used for roaming as well (since providers make out like bandits on roamer calls, there is no need to prohibit simultaneous use in that circumstance). Again, I'm just guessing, but this is probably how the advertised plans work, since it has the least potential for techincal difficulty. The increase in cost to the provider is small compared to two completely seperate accounts, since only one radio channel and one landline can be used at a time. And, assuming any use of a phone generates profit, anything that increases use of cellular phones as well as customer satisfaction with "value" received from the provider is going to be viewed as beneficial.

>
>There IS however, the misinformation from most cellular salesmen that it
>is illegal (wrong) or not technically feasible (wrong again..) .

If cellular providers were set up for "two phones, one number" done the right way, changing the ESN would be *unnecessary*. If you are doing it "to save money" over the provider's official method, then it is most likely not in compliance with the terms of your contract, i.e. it is illegal.

Celluar providers and customers should realize that widespread changing of ESNs is going to make it even more difficult than it already is to prevent the illegal use of lost, defunct, or stolen phones. This will naturally raise costs for legitimate users. If you loose or sell one of your cloned phones, it will be impossible to distinguish it from your other phone. So additional changing of ESNs, rather than just having the provider change the registration database, will be required to resolve the situation. Using a PIN is a good idea (and probably necessary, since widespread changing of ESNs already exists), but having to use it on every call could get old after a while.

>
>Obviously it is in the best interest of the cellular provider to sell you
>two numbers instead of one.

Maybe not. Clearly a lot of customers won't do it because of the substantial extra expense. If one number is used for more of the time,

because of the convenience of having two phones active on it, revenue is increased as well. Plus the cellular company would only need to pay the landline company for one number, and prepare, mail, and collect only one bill.

This is an experiment to see how much response I would get if I offered
a tuning/alignment service for any of the following radios for a flat
fee of $15.00. Customer supplies shipping.

(any band)

Motorola: Mitrek
Micor
Mocom-70
Mocom-30
Motran
Motrak

I would also order xtals and compensate channel elements for extra fee

I could also get pl reeds.

I would tune duplexers or cavities for a flat fee of $20.00

If this sounds interesting to you please send me some e-mail to let me know!

Thanks,

Scott Sidener N0WFL sidener@umr.edu

>There is no modulation in morse CW.

Turning a carrier on and off *is* a form of modulation. In fact,
turning a carrier on and off is sometimes called "on-off-keying",
or "OOK". It should be obvious that that a modulation scheme
where a carrier is either full amplitude or zero amplitude
and the frequency (ideally) doesn't change is a form of
amplitude modulation (AM). Just like other forms of AM,
there are sidebands on a Morse coded CW signal; the amplitude
and width of the sidebands depend on the rise/fall time of the
keying and the rate of keying. This is pretty basic radio
theory covered in the ARRL Radio Amateur's Handbook (didn't you
learn it for the Extra exam?).

Gary Coffman (gary@ke4zv.atl.ga.us) wrote:
: Well, the way packet is currently implemented on HF that's not totally
: true. Current activity is for the most part pure Aloha, and that only
: offers 18% utilization of channel capacity under contention. That may
: be more capacity than pairs of Morse operators use, but it still isn't
: that great. The TOR modes are more efficient on HF at this time at
: utilizing the channel, but, like Morse, they can't share it seamlessly
: with others. And, give the devil its due, Morse operators operating QSK
: can *interrupt* each other's transmissions between characters while packet
: and TOR modes have to wait until the end of a frame. Of course frames are
: short for the TOR modes, 3 characters for AMTOR, so that's not a big deal.
: It's a bigger deal for packet where frame lengths are typically around
: 40 characters plus frame overhead.

What your looking for is a slotted Aloha. The designers of orbital
packet systems have the same problems, and have reached some good solutions
(as much as 32% utlization).

: Clover has given us a clue as to what a good HF modem can do, and
: more efficient packet protocols are possible, even the old Vancouver
: protocol had less overhead. HF packet might best be served by a
: token passing protocol, or not, that would take more extensive
: analysis to determine. For sure CSMA as it's now implemented isn't
: a good model for HF. Karn's demand access model looks much better
: for example.

The military's long haul HF lines would be another place to look for
effecient methods of utilizing this band. I would stay away from token
passing, since token regeneration would have to be done quite often.

Lot's of hams aren't involved in amatuer radio to just flap their
gums over the air. I'm in it for the challenge. We've talked all
over the world on HF with great propogation and high power. What is
possible with low power? What is possible with VHF? Somebody tells
me something can't be done, by god I'll try to do it. Whether it's
QRP on HF or 2 meter contacts with Australia.

Push the limits of what people think can be done. Then go beyond.

Not true, strictly speaking. Keying a carrier does in fact generate sidebands. How much spectrum the sidebands occupy is dependent on keying rate and the rise and fall times of the carrier. Try listening to high-speed CW through a very narrow filter sometime. The blurring together of the dits and dahs is a result of filtering out some of the information in the sidebands.

Fascinating. Does anybody know where "Pan-Pan" comes from? I know
"mayday" is from "m'aidez", French for "Help me!", and I see
"S�curit�" is just French for "Safety". But "Pan-Pan" is baffling.
It's certainly an attention-getting sound.

2927. FS: 1961 Edition of "The Radio Amateur's Handbook"

Newsgroup: rec.radio.amateur.misc
Date: 1995-08-16 00:00:00 UTC
From: David Cleaves <dcleaves@mitre.org>
Message-ID: <40sp3i$b46@linus.mitre.org>
Source record: 240305

I have a 1961 edition of "The Radio Amateur's Handbook" for sale. Published by the American Radio Relay League, there are over 700 pages of articles, circuit diagrams, pictures, and advertisements of 1960's vintage radio equipment. The manual is complete, with no pen marks on the pages, but the binding is rather loose in some places. If interested, the manual is available for $6 plus $3 postage. Please email to "dcleaves@mitre.org" if you would like additional info. Thanks, and best regards.

The ad is there, and I have a new goal in life: to own that radio! It is beautiful, and quite different from the FT-1000D; no upgrade, unless it includes a new front panel. Can't wait to try one, and to see lab test results. There were no prices given in the ad; anyone know what it will sell for? I'm guessing $5,000.

You can use a simple relay 'cuz most transmitters have an internal
switch of some kind which closes on xmt.
There are several surplus tube-type T/R switches from B&W and Johnson
that are sometimes found at hamfests/fleamarkets, and there have been a
few in very old QST mags from around the early 1960's.

If you use a relay, it doesn't have to be fancy at HF, a couple amp
contacts will generally do fine.
Regards, Al

produced and/or approved. Target date is the end of November.
Wonder how many more "target dates" will occur.

2937. US Island Award FAQs Part. 1

Newsgroup: rec.radio.amateur.misc
Date: 1995-08-16 00:00:00 UTC
From: johnn0isl@aol.com
Message-ID: <40tl54$o9v@newsbf02.news.aol.com>
Source record: 240315

From: NL7TB@WA7EAQ.#EWA.WA.USA.NOAM
To : ISLDX@ALLUSA

FREQUENTLY ASKED QUESTIONS ABOUT THE U.S. ISLAND PROGRAM

Part 1 of 2

Q. What are the US I awards?
A. US I offers certificates (red, white and blue!) for:
-BASIC AWARD (100 islands) -INTERMEDIATE (300 and 500)
(plus W/VE CONTEST operations) and
wooden plaques for ADVANCED (2 different categories).
You can also receive a "free" island activator cert-
ificate for activating 10 new state islands!

Q. What info is to be exchanged for island collecting or
activating?
A. Island stations should send a signal report, island name
and US I number as a minimum. Non-island stations should
send a signal report and their QTH. It's more personal to
exchange names and info about the island station (ie- WX,
antenna used, isle description..) makes an interesting QSO.

Q. I guess I need an elaborate station for island collecting?
A. No, not at all! Many island enthusiasts operate mobile or
use a simple wire antenna, car battery or generator, a tent
or set up right on a picnic table for portable ops.

Q. Must I submit any paperwork to activate an island (I hate
paperwork!)?
A. Only if you're applying for one of our many awards and then
the paperwork is minimal!

L Rt. 2 Box 2161, Benton City, WA 99320 *
* *
* US Islands ARC "KC7KHU" D
* US I Last Frontier ARC "WL7CND" X
****
August 5, 1995

We have several new islands that have been pre-qualified.
Thanks to Gerry, VE6PWJ, for the list. Here they are:

*ALASKA (AK-XX) *FLORIDA (FL-XX) Absecon..NJ-03S
St. Paul..41S Black..09S Aquidneck..RI-06S
Pleasant..42S Bahia Honda..12S Bailey..ME-22S
Amchitka..43S Dry Tortugas..13S Little Colington..
Barter..44S Egmont Key..14S NC-11S
Barnof..45S Little St. George..08S Sullivans..SC-04S
Endicott..46S Tybee..GA-09S
Crooked..47S *other misc. islands: Chincoteague..VA-02S
Sitkinak..48S Middle..NY-07S (WA3EOP) op.
Nawkins..49S Appledore..MA-02S
St. George..50S Bogue Banks..NC-10S

Kim, KD1VE, sent a packet msg saying she'll be on from a Maine
island (s) around Aug. 16th. She put on So. Hero Island for Field
Day and made over 100 QSOs- good show! Rick, N6IV/KL7, says he'll
be more active on 20m from Douglas Island when the band improves.
Rick has quite an impressive station over looking Juneau. I had a
great time operating from there! Page, WA3EOP, has something
cooking
* too I'll bet. If I can swing it, my son (John, KC7FVA) and I will
be
on from a Washington state IOTA island (Destruction, WA-05S or
Tatoosh
WA-06S)...more to follow. Stay tuned around 14.250 to 14.260 for
US I
traffic!

Our 1st Annual W/VE Island contest promises to be fun, good prop-
ation will help! It will be nice just to get out, away from the
city
sounds. Many island enthusiasts have expressed interest but we

still
need more "activators", especially from Canada. The contest starts
at
1700Z Saturday (Sept. 23) and ends 2300Z Sunday (Sept. 24). N0ISL
is
the contest manager. Remember, you don't have to be a BIG GUN
contest
station to participate or have fun. This one is for all of us!

73, good island DXing
John, NL7TB

* Sept. 9 listen for N3TDN, N3TLI, AA3LG and WA3EOP from Pee Wee
Island on multiple band operation. Tnx Page,WA3EOP, for another
"FORM A" and for activating Chincoteague Island!

This is really a semantics game, but I am curious why I can't receive these AM-CW signals using an envelope detector? (Psss-p-psss-pt psss-psss-p-psst doesn't count <g>)

Because Morse-considered-as-AM would detect to about a 3 Hz audio tone. Note CTCSS schemes consider even up beyond 250 Hz "subaudible" since communications-type receivers don't pass them through the audio stages. Even hi-fi audio only goes down to about 20 Hz, because that's where human ears give out.

Rich

(derivation of 3 Hz: "PARIS" has 14 dots and dashes, assume 20 WPM so it takes 5 seconds to send, 14/5 is about 3.)

One of the JAs on the DX reflector reported that the domestic (JA) price was about 350,000 yen (can't remember the exact number). At current exchange rates (aprox. $0.98/yen) that would be about $3,700. Since the FT-1000 lists at $4229.00 (and should net about $3900) and the FT-990 lists for $2759, I'm betting the FT-1000MP will list at about $3495 (without the optional Collins mechanical filters).

Makes me think seriously about selling/trading my second (FT-990) rig.

> ||||||||
>
> Not hardly Dana. You can't modulate a carrier when it is turned off!
> There is no modulation in morse CW.

BZZZZT! Wrong. But thank you for playing.

On-Off Keyed Morse Code is similar to using a square wave (bi-state) to drive an AM (Amplitude Modulator) to 100% modulation. (In effect.)

You could say you are driving a 50 watt station either to 100 watts or 0 watts. Or you could say you are turning a 100 watt station on or off.

Interestingly enough, most of the S line Collins gear was really Tone modulated SSB. They keyed an audio tone on and off, and with the quality of carrier and opposite sideband rejection they had, they were within the requirements of the FCC for spectral purity.

If you're gonna argue about this stuff, make sure you're right before you claim the other guy is wrong.

CHICO DENTIST RECALLS DRILLING
�REMEMBER PEARL HARBOR�
ON TOJO�S 1946 DENTURES

Ann Bancroft
Associated Press

SACRAMENTO - As the world commemorated the 50th anniversary of Japan's World War II surrender this week, E.J. "Jack" Mallory was remembering Gen. Hideki Tojo�s dentures.

The retired Chico dentist was a draftee stationed in occupied Japan when, in a youthful prank with post-war revenge, he drilled a Morse code message into imprisoned Japanese prime minister�s dentures.

�Remember Pearl Harbor" was literally chewed-on by the man who approved the surprise attack that drew the U.S. into World War II. The secret message remained in Tojo's mouth for three months.

"It wasn't anything done in anger," said Mallory, who made full upper and lower dentures for the prime minister before Tojo was hanged as a war criminal in late 1948. "It's just that not many people had the chance to get those words into his mouth."

Mallory, then 22, knew that drilling "Remember Pearl Harbor" in English could lead to a court martial. An amateur radio operator, he decided to inscribe the letters in the dots and dashes of Morse code with a round dental drill.

�The only ones in on this were my dentist roommates and myself, all sworn to secrecy lest (roommate) George and I find ourselves in deep trouble," he said.

George Foster, who hailed from Iowa and is now dead, was assigned to provide dental services at Sugama Prison, where he extracted Tojo's teeth and sought Mallory's help in making the dentures.

"I was naturally excited to be able to see and meet one of the world's then-most famous (or infamous) persons - second only to Adolf Hitler," Mallory wrote in a memoir at his children's urging. "But the man I met was not the ferocious-looking "Tojo the Razor" we had seen for so many years in photos and caricatures, but rather a tired, grandfatherly looking older man."

After many visits over several weeks, Mallory finished the dentures in the fall of 1946.

In February, 1947, two classmates of one of Mallory's dental service buddies arrived and were let in on the secret.

"We took them on an excursion to the prison to show them our masterpiece," Mallory said. The dentists called Tojo to the prison dental office, ostensibly to examine the dentures.

[Monterey County Herald, 16 AUG 95, p. 4C]

Couldn't find him in the callbook, however. Anybody know the callsign of E.J. "Jack" Mallory?

ARLX044 Hurricane Felix 3

As of 1500Z, or 11 AM EDT Wednesday, Hurricane Felix is 150 miles
ESE of Cape Hatteras, North Carolina, moving WNW at 12 mph. It
remains a Category 1 hurricane, with maximum sustained winds of 80
mph. Some decrease in forward speed is expected over the next 24
hours. If Felix continues on a direct path for Cape Hatteras, the
storm's center would arrive at midnight tonight. A hurricane
warning is in effect from Little River Inlet, South Carolina, to
Chincoteague, Virginia.

ARRL North Carolina Section Manager Reed Whitten, AB4W, reports that
the Tar Heel Emergency Net is active on 3923 kHz with an alternate
frequency of 7232 kHz. Amateurs are requested not to transmit on
these frequencies unless directed to do so by net control stations.

ARLX045 James Brown, W6VH, SK

James Brown, W6VH, a retired Los Angeles municipal judge and former Los Angeles city councilman, died July 10, 1995. He was 89.

He was born in 1906 in Pingree, North Dakota, and moved to California in 1912. He was first licensed in 1922 as 6VH, according to long-time friend Don Goshay, W6MMU. For many years he worked with the late Don Wallace, W6AM, on Long Beach, California, Polytechnic High School class reunions.

Just out of high school, he became a shipboard wireless operator and then an early disk jockey. He enrolled in law school in 1934 and was admitted to the bar in 1939. During World War II he was involved in the design of aircraft electronics and radar, but when peace came he returned to his law practice, while continuing his work in engineering, according to the late Lenore Jensen, W6NAZ, who profiled Brown in Worldadio magazine in 1981.

City Councilman Brown represented the Hollywood District and, Goshay said, was ''well known for his public battles'' with Los Angeles Mayor Sam Yorty in the early 1960s. He was appointed to the bench in 1964 and served as a judge until retiring in 1985.

He was a member of the Radio Club of America and the Society of Wireless Pioneers (and SOWP president in the early 1980s). Among his survivors are his wife, Margaret.

Prospective member:

Hello. My name is Beau Barnett, from Adamsville, AL. My callsign is KT4BI. A group of teenage 'HAMS' got together and decided to help the younger generation of amateur radio operators attain a larger 'voice' in the hobby. We decided to start a club. Around two months ago, the four of us decided to try to take it national, and we have allready reached international status. YHA actively pursues 'HAMS' under the age of 21, but in no way are we denying anyone a membership, regardless of age. If you would like some more information on YHA, please post it here, or email me at:

abarnett@snsnet.net

with a subject of 'YHA Information'. I will then expedite you some information. Thanks, and see you on the air.

KT4BI

Beau Barnett, Vice-President, YHA

2948. Another Reason To Learn Morse Code

Newsgroup: rec.radio.amateur.misc
Date: 1995-08-16 00:00:00 UTC

SACRAMENTO, Calif. (AP) -- Nearly lost amid the World War II retrospectives is a postwar prank that literally had Japan's vanquished military leader chewing on the words: ``Remember Pearl Harbor.''

A draftee dentist drilled the message in Morse code inside Gen. Hideki Tojo's dentures while the general was imprisoned in occupied Japan. The dots and dashes remained for three months before the secret got out and they had to be removed.

``It wasn't anything done in anger,'' recalled E.J. ``Jack'' Mallory, who made full upper and lower dentures for Tojo in 1946. ``It's just that not many people had the chance to get those words into his mouth.''

Tojo, who had approved the surprise attack that drew the United States into the war, asked for the dentures so he could speak better at his war crimes trial. He was convicted and executed in 1948.

Mallory, then 22, knew that writing out the words ``Remember Pearl Harbor'' could get him court martialed. An amateur radio operator, he decided to inscribe the letters in Morse code instead.

Also in on the secret was George Foster, who died in 1990. He was assigned to provide dental services at Sugama Prison near Tokyo, where he extracted Tojo's teeth and sought Mallory's help in making the dentures.

``I figured it was my duty to carry out the assignment,'' Foster wrote in 1988. ``But that didn't mean I couldn't have fun with it.''

When the dentures were done, Mallory said he and Foster told other buddies in the dental service.

``We took them on an excursion to the prison to show them our masterpiece,'' Mallory said. ``The only ones in on this were my dentist roommates and myself, all sworn to secrecy.''

But the secret was just too juicy to hold. One of the men wrote about the escapade to his parents in Texas, they passed it to a brother, who broadcast it on a local radio station. Suddenly, the tale of Tojo's teeth was broadcast all over the world.

Mallory confessed to his commanding officer, who told him to hide while the story was denied. Late that night, Mallory and Foster drove to the prison and woke a bewildered Tojo in the middle of the night to ``borrow'' his dentures.

Using a crude grinding stone, Mallory removed the dots and dashes.

The erasure came just in time. The next morning, a furious colonel called Mallory and his roommate.

``Is there any truth in this report that `Remember Pearl Harbor' is inscribed in the dentures?''' the colonel barked.
``No, sir!'' the men were able to answer truthfully.
Mallory said he never learned if Tojo found out about the trick, which was not publicized in the Japanese press. But a dentist who succeeded Mallory in Japan told him that the general began complaining about the dentures' looser fit.
Mallory, now 71, retired a decade ago from his dental practice in Chico, 90 miles north of Sacramento. Since his military service ended, he has talked openly about the prank. There is even a display about it in the Navy Dental Corps Historical Museum in Bethesda, Md.
In 1969, Mallory returned to Japan for a reunion with several Japanese dentists. Over dinner, he told them the tale of Tojo.
``They thought it was the funniest thing,'' Mallory said. ``They all said, `Why didn't you tell us this?'
``I said, `well, the timing just didn't seem right.''

Or better yet, wouldn't one need to control their own patch (or be able to)
via a frequency above 222 MHz?

In a message dated 08-15-95 at, BENO M BEQUETTE JR wrote to JOHN BURKE :

You can use ZTerm 0.9 as a terminal program to run the Kam. Follow the
directions fo using ZTerm on a floppy system. You may need at least 2 Meg of
memory and 2 flopply drives for the best results. ZTerm should also work as a
terminal program for the PK-232 also. My brother is using ZTerm for a
terminal program for his Kam Plus., works fine. He started out with a Mac
512KE with the 2Meg daughter board installed, upgraded to a 4 Meg Mac Plus
and then to a 4 Meg MacSE, 2 weeks ago. Be sure to read carefully the manual
for ZTerm 0.9.
You should plan to expand your ram to 4 Megs ASAP and get a external
harddrive at least a 40 Meg SCSI drive.
Here is a source for some low cost ram for your Mac :
Dean Smith
509-536-8604 during the day before 2:30 PST
You can use 120ns or faster. You can use the 2 or 8 chip set, 30 pin sims
they must be non-parity sims.
Dean had listed the following 30 pin sims :
2-1megx8's 60 ns $25 ea or $45 for both
2-1 megx8's 100ns-$15 ea or $25 for both

call him and see if still has any in stock these are far prices for for
simms.
This add was dated 07-16-95. He may have more on hand now so give him a call
and check.

If you do not have the manual for your Mac Plus find one before you try to
add the memory. Memory can be increased to 2 meg, 2.5 meg or 4 meg, using 2-
1 meg simms, 2-1 meg simms and 2-256k simms or 4-1meg simms there is resistor
that has to be cliped and or resoldered.
If you need some help look for your local Mac usre group for help.

Good Luck,
Beno

Hello this message is sent on behalf of Roger G3LDI
sysop of GB7LDI.
Is there any Satgate Sysop that may be able to help?
I am running two computers, a 486 and a 386. The
386 has the FBB BBS running in WINDOWS, HF, VHF and UHF.
The 486 runs the Satgate,WISP software also running
under WINDOWS. Has anybody fully automated such a system
and if so, would it be possible to contact me for
a discussion? I need to have fully automatic transfer
of mail from one to the other, with as little human
intervention as possible!
Look forward to hearing from somebody!

Ps both machines are running WFWG3.11 and talking to each
other over a small peer to peer lan.

: Again, one wonder how `serving time' makes up for the violence and
: scars the felon has inflicted upon his victims. Maybe conditions of
: granting a license to the criminal should be left up the the victims.

Seeing as how we, as potential and/or former jurors and voters, have
decided the guilt of the person, established punishment as retribution,
inasmuch as our laws allow, and ensured the person served the required
time and paid his/her fines, why should there be additional punishment?
And who has the right to impose such additional restraints on the
ex-felon's rights to be a free citizen again?

Rhetorically posed, no response expected.

: As long as you follow rules for one way transmissions.

That's just in the realm of redundant. If a Ham can make a call on the club machine, that same person can make a call on his/her own machine. They're both one-way, if you look at it - only the Ham and the repeater identify.

>whether current FT1000s will be upgradeable?)
>

September QST does, indeed have a full page ad for the FT-1000MP - it is on
the inside rear cover.

Given the information in the ad (and the picture) the current FT-1000 will not
be upgradable. The FT-1000MP has a couple of limitations not present in the
FT-1000(D) ... first the sub receiver is limited to "same band" operation ... the
FT-1000MP is 100 watts.

It looks to me as if the FT-1000MP is an upgrade/enhancement to the FT-990
rather than the FT-1000(D).

2964. 10 Commandments for the Service tech (in fun)

Newsgroup: rec.radio.amateur.misc
Date: 1995-08-16 00:00:00 UTC
From: bobm@msn.fullfeed.com
Message-ID: <40rqqa$lor@fullfeed.msn.fullfeed.com>
Source record: 240422

Ten Commandments For The Service Technician:

(1) Beware the Lightning that Lurketh in the Undischarged Capacitor, lest it smite Thee and cause Thee to Bounce upon Thy buttocks a most UN-technician-like Manner.

(2) Causeth the Switch that Supplieth large quanities of Voltage to be Opened and Thusly Tagged, so that Thy Days in this Earthly vale of Tears may be Long.

(3) Prove to thyself that all Circuits that Radiateth, and Upon Which thou Workest, are Grounded, and have their Power Reduced or Removed, lest they lift Thee to thy Radio Frequency Potential and causeth Thee to Act like a Radiator also.

(4) Tarry not amongst those Fools that engage in Intentional Shock; for Verily they are surely Non-Believers and are not Long for this World.

(5) Take care that thou Useth the Proper Method when thou takest Measurements of High Voltage, lest thee Incinerate both thyself and thy Meter. While Thee hath no account Number and can therefore be Easily Replaced, thy Meter doth have an Account Number and as a Consequence, replacement bringeth much Woe unto the Supply Room and Purchasing Officer.

(6) Tamperest not with Interlocks and safety Switches, for this Incurreth the Wrath of thy Supervisor and bringeth the Fullness of the Fury of the Safety Inspector down upon thy meager Head and Shoulders.

(7) Workest not on Fully-Energized Equipment, for if thou so Dost, thy Funeral Home shall surely Console thy Widow.

(8) Workest not on Equipment alone, for electrical Cooking is a slothful process and Thou might Sizzle in Thy own Fat for Hours upon the Circuit before thy Maker sees fit to end thy Misery.

(9) Triflest not with Radioactive Tubes and Substances, lest thou Commence to Glow in the Dark like the Firefly, and thy Spouse have no Further use for Thee except thy Wages.

(10) Thou must forceth thyself to Document all Modifications made by Thee upon Equipment, lest thy Successor tear his Hair out and go slowly Mad in His attempt to Decide what manner of Creature hath made a Nest in the Wiring of such Equipment.

: >
: >Sorry, it just seems to me that "enhancing international goodwill" (a
: >stated purpose of Amateur Radio) improves the human condition. Silly
: >me.

: Silly you indeed. Many DX contacts and behaviors are, in my opinion,
: detrimental to international goodwill. That's true regardless of
: mode, but I have found that those on the digital modes often have
: more to say than those using Morse. Now I believe that the nature
: of the mode used has a good bit to do with that. Perhaps it is because
: they have made the choice to use more than the most rudimentary mode
: of information exchange that the information content is higher.

You can cite bad operating behavior in ANY mode...including digital
modes and (perhaps especially) in voice modes. That says nothing about
the value or worth of a mode. It perhaps says something about the
operator...or tradition...or even perceived wishes of the person on
the other end of the QSO. But it says nothing about the mode.

We all know your feelings about Morse. You have every right to like
it or not and to use it or not. However, it seems your dislike of it
has lead you to make some inaccurate generalizations and attributions.
You are confusing "operating habits" with "operating modes".
Those who actually have something to say, will (and do) exchange
information quite well in any mode...even Morse. Those with little
of value to say will exchange little information...in any mode. Your
observation that digital operators have more to say than Morse
operators is most likely biased by your operating habits. I operate
both Morse and digital modes and find no such difference.

We also are all aware of your feelings about "DXing".
You often cite this activity as particularly heinous and
detrimental to the cause of goodwill. There is no denying that
certain operating habits of a few DXers are inexcusable, but,
again, attributing this to DXing in general is grossly inaccurate.
And considering that some of the worst "offenses" of Dxing take place
on SSB, it makes no sense to attribute this behavior to the "most
rudimentary mode"...Morse. Or perhaps you view voice as a rudimentary
form of communication?

It takes two to tango. The vast majority of DX contacts take place among willing participants. A polite stateside operator usually lets the DX station dictate the course of the QSO...and if they choose to have short contacts...or long ragchews...it's their choice. How could anyone view this obviously mutually enjoyable activity as being "detrimental to international goodwill"?

One last point you seem to be confused about: The number of words, letters, bits transferred, or any other volume-measure does not equate to the rate of "information exchange". Ever listen to two hams who have nothing to say to each other? After ten minutes of saying nothing they spend five more minutes saying goodbye? What valuble information have they really exchanged beyond "UR 599--TNX FER QSO--73"?

2967. Re: Kenwood Service Stinks

Newsgroup: rec.radio.amateur.misc
Date: 1995-08-16 00:00:00 UTC
From: todd@tj.org
Message-ID: <40s0ik$lk6@news.scruz.net>
Source record: 240425

I've done my best to stay out of this one, but in the back of my mind I guess I knew that I'd eventually give in to temptation. No generalizations here, just my personal experience over the last year or so. Draw your own conclusions -- I know I have. ;-)

I loved my TM-741, but the baddies got the dash-mounted control head when they broke into the car to rip off the CD player. Fortunately (or so I thought) they didn't find the rig itself, which was mounted under the driver's seat. A call to HRO led nowhere; the control head is considered "parts", and HRO doesn't sell parts. The Kenwood service center won't talk to individuals about parts, only corporate customers, so they referred me to their distributor in my area. The distributor couldn't find a part number when I called them, but promised to call Kenwood and get back to me. When they did, they told me that the control head for the TM-741 was out of production (even though I had purchased the rig new less than a year earlier), and that the head for the TM-742 was not compatible.

So much for my beloved 741. The insurance company gave me 90% compensation on the original purchase price, most of which went into a TM-733 (I had lost interest in 23cm FM, and the balance went toward an auto alarm. ;-) Three weeks after the warranty on the 733 expired, I was greeted on power-up by the message "on" where the 2M frequency display should have been, and nothing else. None of the buttons functioned at all -- not even the power switch, so I was unable to execute the hardware reset function. I called the Kenwood service center and was told that they'd seen this problem before, a blown IC in the control head, and was told to send them just the head and that they'd fix it for free even though the warranty had expired. Pretty cool, I thought.

Three weeks after sending them the head I received notification that it worked just fine on the bench using another rig, and was asked to send them the rest of the radio, which I did about a week later. Two weeks after that I received everything back from them with a diagnostic report that read simply, "No trouble found." I hooked it up to a power supply in the shack, and before I even pressed the power switch, the display lit up with the message "on" where the 2M frequency display should have been, and nothing else. None of the buttons functioned. You guessed it -- the rig failed in in *exactly* the same way it had when I first contacted Kenwood a month and a half earlier.

If anyone needs a good night light, lemme know -- the amber display is really quite effective for such an application. If the 733 were usable for 9600 bps packet as advertised (which it isn't), or if the intermod wasn't a constant problem, I'd try sending it through once more. Instead, I've just plain given up on mobile rigs, and am looking to install a dual-band linear under

the seat and stick with an HT in the car....

Yes -- if you're a US citizen. As another poster mentioned, your priv's depend on your licence class. At the least, you'll be allowed to operate all modes on 50 MHz and up. If you've passed the 5 wpm code test, you can operate CW only below 30 MHz. If you've passed the General code test, all modes, all bands period. Just sign
(your call) (mobile/portable) / (canadian call district)
while operating in the Great White North.

COMPUTERS - ELECTRONICS - HAM RADIO - COMPUTERS - ELECTRONICS - HAM RADIO

FLEA all SUMMER at MIT
August 20th, 1995
9AM-2PM

Come to the city for a great flea - plenty of free parking.

MIT's electronics and ham radio flea will take
place on the third Sunday of each month this summer,
April thru October.

There is tailgate space for over 600 sellers and
free, off-street parking for >1000 cars!

Buyers admission is $2 (you get $1 off if
you're lucky enough to have a copy of our ad)
and sellers spaces are $10.00-each at the gate.

The flea will be held at the corner of Albany and
Main streets in Cambridge; right in the Kendall
Square area from 9AM to 2PM, with sellers set-up
time starting at 7AM.

!! RAIN or SHINE !! Have no fear of rain, a covered
tailgate area is available for all sellers (6'8" clearance).

Talk-in: 146.52 and W1XM/R-449.725/444.725 (PL 114.8/2A).

Sponsors: MIT Electronics Research Society
MIT UHF Repeater Association (W1XM)

Connection of amateur radio equipment to the phone system is not normally allowed in Europe (whet else is new).

However some coutries allow it. Germany has some repeaters and some systems connected to autopatches (contact Dan, DL4VCW at packet address: DL4VCW@oh2baw.fin.eu for info), Greece has some as well and we are putting one up in Ireland.

They are all for automatic connection to the police and emergency services. To access the Emergency services, press *9 (I believe the same with the US).

Best,
Peter, EI4GV

From: vector@inferno.com
Message-ID: <795217437501@inferno.com>
Source record: 240430

WI>The bottom line is, most cellular service agreements do not prohibit
WI>cloning YOUR OWN phone. There is no FCC prohibition.

again, this is only legal IF your cellular provider has approved it.
there is no grey area. if your cellular provider prohibits cloning a
phone in it's service agreement, you are breaking the law.

WI>Obviously it is in the best interest of the cellular provider to sell you
WI>two numbers instead of one.

yes, true. however, not ALL cellular providers have set up provisions
for legal cloning of phones. most service areas have 2 carriers
available at the most, and in my area, only one of the two carriers
permits cloning. it is prohibited by the other. don't tell me they
can't do that. they prohibit it, they do catch people, and they DO
prosecute, and i have never seen them lose in court, yet.

WI>I might share my personal experience with cloning.

WI>I have a Motorola MicroTac and an Audiovox mobile in my car. I had TWO
WI>phone numbers which was a real pain. People had to try to call me both
WI>places to get me, and I had TWO phone bills.

WI>I had my phones cloned 2 years ago to the same ESN (electronic serial
WI>number). Actually the Audiovox was cloned to the Motorola's ESN.

last i checked, it WAS illegal completely in the san francisco bay
service area two years ago. GTE mobilenet VERY recently started
allowing cloning of phones on THEIR system only with THEIR approval. i
think they just loosened up a bit recently though. as of yet, cellular
one still prohibits the practice. in my opinion, however, they might
begin allowing it once they begin issuing PIN numbers for access.

2975. Help needed to get started...

Newsgroup: rec.radio.amateur.misc
Date: 1995-08-16 00:00:00 UTC
From: Costas Vlassis <lonewolf@compulink.gr>
Message-ID: <40st3a$pg0@news.compulink.gr>
Source record: 240433

OK thanks for your time reading this message but since I am new
to the word of Ham Radio I really need some help !
To be honest I do not know WHERE to start...
I own a 486DX/33 with 8MB RAM (soon 16) and running Linux + (DOS - Win3.1)
but most of the time I am in Linux with XFree.
Reading through the HAM-HOWTO, I found on a Linux ftp server, I saw
all the neccessary software for the communications (AX.25, satelite
tracking software, etc) but there was no mentioning about the HARDWARE
needed ! Then a packet.faq fell into my hand but that was seriously
outdated (1993 !) so here I am asking you :
What do HARDWARE do I need to get me started with packet radio
communications ? (please be as clear as you can) and how much the cost
will be ?
As you can probably guess I do not live in USA but in Europe,
Greece. What's the experience with this kind of telecommunications on
this side of the Atlantic ?
Does packet radio offer direct connection to the Internet or not
? I mean E-mail, USENET, FTP, TELNET, WWW, etc ? What are the speeds
like ?

Thanks very much for your time,
Costas Vlassis (lonewolf@compulink.gr)

>An article published by K6HH in the June, 1988 issue of the "73 AMATEUR
>RADIO" described a technique of pulsed Bi-Phase shift-keyed (BPSK)
>modulation (19.2 KB in a 3kHz bandwith!).
>
>The key element of this system was a very small phase angle deviation and a
>nanosecond linear transient of the phase modulation.

This step phase change produces products at multiples of the symbol
rate on either side of the carrier, IE sidebands. Because the step
is hyperabrupt, there are multiple sidebands, IE all the odd harmonics.
If you attempt to filter off these sidebands, the demodulated eye
closes up, thus reducing the already poor SNR of the system.

These products have a very brief duration, just during the step
change, so they're difficult to see on the spectrum analyzer, but
they are *there*, and that means pulse interference to anyone
operating up or down the band. Pulse transmission is illegal
on the bands below microwave for this reason.

> was given one and do not know what the antenna should be used for.
Dont know the antenna, but they are always receive only antennas. They are often wide-band. Quite often electrically short. They are essentially low noise amps, fitted with an antenna. Even at HF, they are low noise. Whilst this may seem odd, since the cosmic noise at HF is high, since the antenna is short, it does not pick up much noise, so there is an advantage in haing a low noise.

Not necessarily. Any station can be remote controlled by an auxilary
station above 222.

Yes. If you are controlling that (patch) station by radio link it has to
be done from an auxilary station (at or above 1.25cm).

Doesn't this apply to two meter repeaters with autopatches? If the patch
is brought up by anyone - doesn't a control operator have to be at a
control point since the station (repeater) cannot be under automatic
control when passing third party traffic?

Believe it or not, Radio Shack sells one that works fairly well. I got
mine for $49.95. If your ICOM is the split plug type, it should work.

>(as much as 32% utlization).

I don't think slotted Aloha is a good model for HF. It works for the
satellite because everyone can *hear* the satellite, even if they can't
hear each other, and so the satellite can manage everyone's slices. That
usually won't work on HF because there's likely to be no one station
that all the other stations can hear. Even if everyone managed to
initially synchronize their slices, that synchronization would slip.
And then there's the problem of allocating a new slice for a station
joining the network.

>: Clover has given us a clue as to what a good HF modem can do, and
>: more efficient packet protocols are possible, even the old Vancouver

>: a good model for HF. Karn's demand access model looks much better
>: for example.

> I would stay away from token
>passing, since token regeneration would have to be done quite often.

Probably no more often than slice management, and automatic token
regeneration schemes exist that work fairly well. I don't think
that's the best course, however, and think that demand management
by the *receiving* stations is a better scheme for our semi-chaotic
amateur systems. They *can* hear the interfering stations and can
ask them to hold off for a frame time to allow the station they are
working with to get its frame through. That's just the gut talking,
however, and I haven't done extensive simulation and analysis to
confirm it.

Off on a tangent, I've just added a couple of books to my library that
may be of interest to those wanting to learn about digital signaling
techniques.

Digital Modulation and Coding by SG Wilson

Digital Communications Techniques, Signal Design and Detection
by Simon, Hinedi, and Lindsey.

The latter is a good book for systems designers while the former has
a more formal information theoretic approach, but with enough nuts
and volts to be useful to the implementor as well. I've also added
some DSP books to the library, but I'm still looking for the book
with the right balance between cookbook and abstract theory, something
that puts the DSP algorithms on a concrete footing for the systems
implementor. For example, I'm looking for methods to calculate
coefficients for different digital filters. There's canned software
available, but I'd like to understand the nuts and bolts of that
a bit better, maybe even be able to write a Mathcad template to
do it. Any recomendations gratefully accepted.

The LOW POWER RADIO VENTURES DEPARTMENT of Atlantic Records is looking for fall interns to start immediately. We are looking for several ambitious college students who live in the New York City area and have a strong desire to pursue a
career in the radio or record business upon graduation. Applicants should have college level experience in radio/tv, telecommunications, marketing, or advertising. You must be able to obtain college credit as this is an unpaid internship program. The positions involve approx. 20 hours work per week.

Applicants should send a cover letter, resume, and 3-minute aircheck tape* to the following address:

Atlantic Records
Low Power Radio Dept.
Attn: Garrin Hirschhorn
1290 Avenue of the Americas, 27th Floor
New York, NY 10019

Or you can fax a letter/resume to Garrin at 212-265-7728.

P2>I went to a local ham store today to ask about a power amp for my marine HT.
P2>The guy at the store said the RF Concepts amp for 2m "will not work". I aske
P2>him if he ment that there is some kind of attenuation above the 2m band, or

P2>he ment that the amp is rated at 30 watts output in 2m, but will be less
P2>output
P2>above this band. His reply was a scowl and "It will not work." Help! Any
P2>improvement in power will help when I'm on a lake like Powell.

P2>A more technical and/or complete answer will be GREATLY apreciated! Also, an
P2>suggestions for more power would help!

P2>Thanks,
P2>Dave
P2>P22407@email.mot.co

more than likely, as this is true with most amps, the unit is tuned
tightly for the 2-meter band. anything outside of 2-meters will either
not trigger the amp properly or will yield output so low that it won't
be usable. my advice is to look for a marine vhf amp (and i honestly
don't know of any amps made for marine specifically), look for a
commercial vhf amp (approx 155MHz, and commercial amps aren't cheap!),
or get a full blown mobile rig (well, boat mountable rig), that outputs
a full 25 watts.

>> by lightning. But if Gary's number of 20 couloumbs is correct, and 1 ms is
>> a ballpark delivery time, you get quite a bunch of energy. Or I don't recall
>> my basic physics right.
>
>You are correct sir! Your basic physics is just fine.

Lets run the numbers again. The discharge isn't rectilinear. It is
a damped response with a duration of 2.5-10 ms. For an average bolt,
approximately 70% of the energy is transferred in the first 2 ms,
with the remaining 30% trailing out in the wave tail. So our peak
current will be on the order of 7000 to 8000 amperes.

Now lets look at worst case, where our Earth terminal just makes
the NEC limit of 25 ohms. Lets assume that impedance is completely
resistive. And we'll assume that the wave is rectilinear over 2.5 ms.
All those assumptions are worse than reality, but they'll give a
conservative estimate. So I^2*R gives us the power, or 1.6E9 watts.
But that's *peak* power, the duration is only 0.0025 second. so we
only have 1.1 kW-hr of energy involved. That'd run a 100 watt lamp
for 11 hours, but I wouldn't call that a *lot* of energy. For a better
Earth terminal that has a 1 ohm resistance, not difficult to obtain
with a Ufer ground, the energy dissipated drops to a mere 44.4 watt-hours.
I certainly wouldn't call that a lot of energy.

But lets press on. Cured concrete has a moisture content of about
4% by volume. So a typical Ufer slab of 6m by 6m thats 15 cm thick
is about 5.4 cubic meters and holds about 0.216 cubic meters of water,
or about 2.2 kg of water (almost 5 pounds). So 44.4 watt-hours would
raise the temperature of that amount of water by 20.18 degrees C (putting
aside that most of the heat would be heating concrete and not water). It
takes about 750 times as much heat energy to boil water as it takes to
raise its liquid temperature 1 degree, thanks to water's immense heat of
vaporization, so there's no danger of a steam explosion.

But lets say that somehow the water is turned to steam. Assuming
saturated steam, we're looking at an overpressure of 0.486 PSI
on the concrete (the water is evenly distributed in the slab).
Now I don't have the yield strength of reinforced concrete at
my fingertips, but I seem to recall that it is in the *thousands*
of PSF. Dividing that by 144 still gives a number greater than

1, so still no explosion.

Where we could get into trouble is if we have a high resistance current bottleneck. That would give us spot heating, and the possibility of concrete spalling *at that spot*. This would be similar to playing an torch on a spot of concrete. But that's just poor engineering, and we wouldn't do that, would we?

Apparently from the tales of "exploding concrete", someone out there *is* guilty of such poor engineering. Remember, Code requires a minimum of 20 lineal feet of 0.5 inch rebar in concrete which is in intimate contact with Earth to be a Ufer ground. If you're using less than that, you could get spot heating. The typical Ufer ground I used above as a 1 ohm Earth terminal has about *800* lineal feet of 0.5 inch rebar bonded together and encased in the concrete, IE a 1 foot mesh, which is typical construction practice for load bearing reinforced concrete.

(A few thousand words on how to measure the effective resistance of an Earth terminal should probably be inserted here (a VOM won't do, you need a high voltage constant current source), but I'll leave that for another day.)

Here's the finest I found when I was searching:

[Also available at ATD BBS in the tagline.]

Novice/Technician Class Manager
General Class Manager
Advanced Class Manager
Extra Class Manager

FEATURES:

- Simple, intuitive system for preparing for Ham License
Examinations
- Perfect tool for Volunteer Examiners for creating tests
- Manages entire question pool
- Begin reviewing at any question
- Review questions sequentially or randomly
- Shuffle answers for each question if desired
- Take a test from randomly chosen questions (within the
guidelines of the FCC testing criteria)
- Full set of options for customizing tests, including a Test
Design Screen
- Print complete tests, along with answer sheets and score key
- Save tests to disk for later use
- Study assist screen tells you what areas you need to study after
taking a test
- Pop-up on-screen calculator
- Automatically "remove" a question from the "question card deck"
when answered correctly, if desired
- Manually remove any question from the "deck" at any time
- Reinsert into the "deck" any previously removed question
- Start review all over by putting all "cards" back into the deck
- Show answers always or only after an attempt at the answer has
been made
- Saves option settings, deck, and last question number to disk to
"pick up where you left off"
- Print any part of the question pool

: }>Do you NEED to use an 8 foot rod? I think this is what she was getting at.
: }
: }It actually depends entirely on the soil in your location. If you're at
: }the beach, a two-foot rod driven right at the waterline will probably make
: }fabulous contact with the earth. If you're in the middle of a desert,
: }8 feet driven into sand probably won't really be adequate. But in most
: }locations, where the water table is relatively close to the surface but
: }not actually higher than the surface :-), a two foot rod will do a noticably
: }less efficient job than an 8-foot rod.
: }
: How true, here in South Florida, 8 feet may well be OK, but just 150-160 miles north
: in central Florida, you may need to go 50 feet...

: Bruce, WB4YUC

So it's ALMOST like a guessing game. I understand that the rod should
go BELOW the frost line. Here in my part of New York that's about 2 1/2-3
feet. Sounds like 8 feet may be a safe length in any event.

I called the ARRL to ask about these forms. The August '95 QST says that the whole vanity callsign program hasn't started yet. So did the VE I talked to at ARRL HQ. They said to send in a SASE to the ARRL HQ. When they get them, they will send them out to you. I don't have the address with me right now, but you can call them at 203-594-0259. You will get the operator at the ARRL. Tell him/her that you want to know if they can send you a form 610-V. They will transfer you to another person (I think in the VE section) and he/she will tell you the address. The person I talked to said that they would probably not be ready till Nov. or Dec.

: appreciated.

This is an easy one. Find a sensitive, microamp meter like the one out of
an old VOM. Put a crystal diode across it. Connect a short piece of wire
to one of the terminals for a antenna. I used one for many years. If it
reads backwards, reverse the diode. If you want to really get fancy,
put a reostat in series with the diode. Thats all there is to it.

Are there any places that sell badges that have something to do with communications/ham radio. Such as Communications Specialst, or Ham radio operator.

I know I could get a custom badge made for about $40, along with a wait of 5-6 weeks. I just somewhere might have stock ones cheaper.

>psss-psss-p-psst doesn't count <g>)

Oh, Mike, you know the answer; the fundemental frequency of the
modulating signal is fairly low. A sequence of dits sent at
20 WPM is the same as sending an alternating one/zero (1010101010...)
pattern at 16 baud. Since each one/zero cycle corresponds to a
single square wave cycle, the 16baud number is divided by 2 to
yield the highest fundamental frequency, which is 8Hz. Higher
harmonics will be present, of course, depending on the shaping of
the one/off transition; an ideal square wave would have a great
number of odd harmonics present (these are the key clicks you
sometimes hear). So, under ideal conditions you'd hear
a signal darn close to DC, and the ear isn't very good at dealing
with this.

In real life, we listen to Morse code signals with a fairly high level of background noise. Most of our radios have AGC which will increase the noise level in the absence of a signal but decrease the noise in the presence of a DC carrier. The Morse signal, if envelope detected, would pump the AGC and that would add some other low frequency components.

I am writing about my recent experience purchasing my mobile rig, a Icom IC-2700H. I purchased from Ham Radio Outlet (via mail order) and the order was handled professional and rapidly. The salesperson ansewered all of my questions without hesitation or resistance. I also ordered a add-in module (a tone squelch unit). He indicated that the squelch unit was not in stock in the store I called and it would be sent from another store. He then called back to point out that the instructions with the module did not indicate properly the precautions to be taken when removing the old unit and inserting the new one. I appriciated him taking time out of his day to call me back to provide information that was useful to me, but obviously not neccesary for the sale.

There has been much discussion about shipping and handling charges as well. I just think about this as part of the total price. HRO does not charge a shipping charge. If some other store were to have a price that was $20 less and they charge $15 for shipping, does that make the deal any worse since the total is $5 less?

Well I have rambled on long enough. I just wanted you all to know that I had a pleasent experience purchasing.

I know I asked this before, but I lost the answer :(

What is the alert tone used by NOAA weather radio for an alert? (The same tone used by the alert radios that RS sells)

Is this a standerd DTMF tone? This way I can set my HT to open-squelch on a alert.

Are there any plans/devices out there that will, on hearing the tone, open a audio line. This way I could put it on a spare scanner, and leave it on at home all the time.

Thanks

: Not hardly Dana. You can't modulate a carrier when it is turned off!
: There is no modulation in morse CW.

Any time you introduce a non linearity there is a modulation. Last
time I checked turning on and off is non-linear. In fact that is how
modulation is done with diodes. Hmmmm. It also widens the signal by the
an amount inversly proportional to your switching frequency. Hmmm.

The USCG was only a tiny fraction of the stations monitoring 500 kc,
and they are the only ones who have ceased monitoring. There is still
plenty of activity on the ol' 600M calling and distress wavelength so
string up an antenna and listen in after sunset. You'll still hear
some XXXs and TTTs, and plenty of CQs (especially at the top of the
hour).

A good opportunity to repost this:

FAQ: US Automatic Reciprocal Operation in Canada

Q1: I have an FCC-issued amateur license. What do I have to do to
operate an amateur radio station in Canada?

A: A reciprocity treaty, TIAS 2508, provides for US-Canada reciprocal
operation of amateur radio stations. No application, registration, or
fee is required. You are automatically eligible to operate in Canada
if all three of these conditions apply:

1. You have a valid FCC-issued license;
2. You are a US Citizen;
3. You are a resident of the US (if you're not a US resident,
please direct your questions to a Canadian official. As I
understand it, if you become a Canadian resident, your US
license is good for a while, but they expect you to get
a Canadian one eventually).

(GR2.45.1.a, RIC-25 p. 9)

Q2: What privileges do Canadian operators have?

A: Legally, Canada has no separate phone band or other mode
restrictions. Instead, they adhere, on a voluntary basis, to a
bandplan, similar to the way we use 160 meters. (The IARU Region 2
bandplan can be found in Chapter 2 of the ARRL Operating Manual.)
Canadian amateur bands are the same as those in the US up through 1.2
GHz, except they have all of 220-225 MHz, and they only have 430-450
MHz. There are, however, bandwidth limits (-26 db):

160, 80, 40, 20, 17, 15, 12 meters: 6 kHz maximum bandwidth
30 meters: 1 kHz
10 meters: 20 kHz

6, 2 meters: 30 kHz
220: 100 kHz
440, 902: 12 MHz
1.2 GHz and up: none specified

(Schedule II, RIC-25 p. 15)

Q3: What privileges am I allowed while operating in Canada?

A: All foreign amateurs, including those from the US, are assigned
reciprocal privileges according to the Morse Code speed needed to
qualify for their license:

12+ wpm: All "Advanced + 12" privileges
(i.e., *all* Canadian privileges)

[US General, Advanced, Extra Class]

5-11 wpm: All privileges above 30 MHz,
PLUS CW and CW only on all bands below 30 MHz;
limited to Basic privileges [*]

[*] *Canadian* Basic + 5 wpm licensees are allowed
full access above 30 MHz, plus (full) access to
80 and 160, only. However, the above *is* what
the rules say about *foreign* amateurs operating
in Canada.

[US Novice Class, Technician + 5 WPM code]

0-4 wpm: All privileges above 30 MHz, with Advanced privileges

[US Technician without code]

(GR2.45.2,3,4, RIC-25 p. 9)

Q4: What's the difference between Basic and Advanced?

A: Without Advanced Qualification (or equivalent), you may not:

1. posess or install a transmitter or amplifier that isn't
commercially designed and manufatured;
2. posess or install any radio apparatus manufactured specifically
for use as a repeater where input and output are on the same band;
3. install a repeater where input and output are on the same band;
4. set up a club station

(GR2.47, RIC-25 p. 10)

Basic operators are also limited to lower power.

Q5: What are the power limits?

A: An Advanced operator or equivalent can use up to 1000 W dc input,
if power is measured as input to the final stage, *or* an output of
2250 W PEP SSB/750 W carrier power for other modes, if output power is

measured.

A Basic operator or equivalent is limited to 250 W input, *or*
560 W PEP SSB/ 190 W carrier power other modes, output.

It is illegal in Canada to posess or install a transmitter or
amplifier capable of exceeding your legal maximum power by 3 db.

(GR2.58, RIC- 25 p. 11-12)

Q6: So a General class licensee can transmit phone on 3760 or even
14140 kHz? And a Novice can use a 2 meter repeater?

A: Absolutely.

Q7: But I heard that the FCC won't allow you to exceed your US
operating privileges, even in another country.

A: I personally called the FCC and was able to confirm that this is
NOT the case. The FCC does not enforce Part 97 in foreign countries.
Despite what you may have read, it is perfectly legal to use whatever
privileges Canada allows you (see above) while you are operating a
station in Canada.

Q8: How do I identify in Canada?

A: If you're operating under your US license, then you use your call
"mobile" (if you are) or "portable" (if you're not), *followed by* the
appropriate indicator:

Nfld: VO1
Lab: VO2
PEI: VY2
NS: VE1
NB: VE9 (since Dec 1993; prior to this it was part of VE1)
Que: VE2
Ont: VE3 or VA3
Mtba: VE4
Sask: VE5
Alta: VE6
BC: VE7
NWT: VE8
Yukon:VY1

On CW, RTTY, and such you just use a slash, for example, I would use
"KG2S/VE2" in Quebec.

The treaty requires you give your location by City and
Province/Territory at least once per contact, but the Canadian rules
make no mention of this.

While the treaty requires English ID, the Canadian rules allow you to
use French, too. A chacun son gout. (However, you are not limited to
English or French during your contacts; you can use any language.)

Of course, if you operate a Canadian station or get a Canadian license yourself, you use that callsign.

(GR2.57.1-3, RIC-25 p. 12)

Q9: What if I'm not from the US?

A: You will have to contact Communications Canada (numbers below) and apply for permission to operate. If your country has a reciprocal agreement with Canada, your privileges (once licensed) will be those outlined in Question 3.

If you, as a US licensee, want a Canadian license, you may be able to get it merely by passing a 26-question rules exam and giving a Canadian address. I know of at least one Advanced-class licensee who has done this with a Delegated Examiner. A Canadian station license carries an annual fee (currently about CDN$24), and license terms end 31 March of each year.

Q10: I'd like to get a copy of the Canadian rules. What do I do? Where do I address questions if I'm in a "gray area"?

A: I highly recommend getting a copy of the rules. They publish a number of circulars called RICs that you can order from Industry Canada. They sent me these without charge. You can get them in French, too, of course ("CIR-25", etc.).

ON THE WEB: Most are also at http://www.cam.org/~dino/ric.html

RIC-25: Rules and Regulations affecting the Amateur Service. 24 pp.

RIC-3: Banned Countries/Reciprocal List/Third Party Traffic List

RIC-66: Addresses and Telephone Numbers of Regional and District Offices

If you want information on exams in Canada, ask for:

RIC-24: Information on the Amateur Operator's Certificate Examinations

RIC-1: Information on the Delegated Examiner system

There are a lot of District offices, so I'm only going to list one in each Province. You can ask them to mail the rules to you, or you could get the address for the office closest to where you'll be visiting and go pick up what you want there.

3012. Kam and APRS Program

Newsgroup: rec.radio.amateur.misc
Date: 1995-08-17 00:00:00 UTC
From: askaggs@freenet.columbus.oh.us
Message-ID: <40vb7a$7uu@acme.freenet.columbus.oh.us>
Source record: 240350

If you are having trouble getting you Kam TNC to initialize with the APRS program try going into the inittapr file in the systems directory and resetting the PAR command from 0 to 4. I have found that this must be done on my Kamtronics Kam version 5.0 before it will work correctly with the program. 73, see you on the freq. Allen

> > I think it is high time that we reconsider the amount
> > of power these little tyrants sitting on HOA boards give themselves!
> >Steve KA6S

Steve, I kindly disagree.

People that live in those communities willfully and sometimes gladly
give those HOA boards the power to control the community. The boards
have no power, no influence, no say in the lives of people that have
not given them that power.

Far too often in far too many ways the American people are willing, nay
eager to sign away their freedoms. They believe that someone else can
protect them better than they can protect themselves. The HOA board, like
the congress, has only as much power as the people give them.

I personally find that to be an unacceptable situation. Every opportunity
I have I vote with my feet, my money, and my ballot to change it.

ObRadio:
I've been having a ball running HF-mobile using a Hustler system
mounted on the side of my van. I've set it up so that the hinge
in the fold over mast is about at the drip rail level. I can easily
reach it to set it up or bring it down and I can anchor the loose
end to the roof using a magnet. I've installed a stand off support
just below the hinge to take the lateral load from this rather long,
stiff and heavy antenna. This is all well and good but it's a real
pain to stop at the end of my tree lined street to erect or take down
the antenna every time I use it. I'd really REALLY like to be able to
put a shock spring just above or just below the hinge. That way I'd be
able to leave the antenna up when driving down tree lined streets or
campgrounds. Has anyone done this? Does anyone know someone that does it?

I'll be away for a couple days longer than our local 'expire' time
so E-mail responses would be appreciated.

If your installation is critical, the effectiveness of the ground system can be _measured_, rather than guessed at. Local ham club did presentation on this; AC resistance measurement between two rods, as I recall. I _think_ the PolyPhaser literature mentions this sort of thing.

>Even hi-fi audio only goes down to about 20 Hz, because that's where human
>ears give out.

Ah, Rich, you haven't listened across HF with an old envelope detector receiver I see. A nice strong OOK Morse signal does go hiss-de-hiss, and often thump-de-thump too. Unfortunately, the sense of the hisses and silences are reversed from normal Morse. The carrier's presence creates a "quieting" effect in the receiver, and its absence creates a band noise hiss. If you can warp your brain right, you can copy it. It's not something you'd want to attempt with a weak signal, or in interference, but it does sort of work.

And BTW back on topic, On-Off Keying *is* a modulation method, one of the most primitive possible. It even generates *sidebands* just like any other AM modulation. Hmmm, wonder if we could exploit that and develop single sideband CW. Just think of it, half the bandwidth, and 8 times the effectiveness, just like with DSB AM versus SSB voice.

Lets see, the carrier is mighty close to the sidebands, so filter methods would be tough. Looks like a job for a DSP IQ modulator, ala SSB phasing systems. Once we get rid of that nasty power wasting carrier, we can cut down on interference in the Morse segments something wonderful. All we'd have would be half-clicks at an average 3 Hz rate. We should be able to detect those and use a paralleled FIR filter and Hilbert transformer to recover I and Q, then use a reconstruction filter on the sum to recover the original keying waveform. It could even be copied by ear if we rigged it up to drive a sounder. Hey, this has possibiiities!

Of course OOK is incoherent, and Morse is non-uniform, so we'd do better with other digital codes, but something 8 times better than present OOK Morse use isn't something to lightly ignore.

Come on all you Morse guys, get with the program, move up to
single sideband Morse. :-)

Note: while I'm having a bit of fun, all this is true. We really
could do single sideband Morse, and it should really be about
8 times more effective, just like SSB voice versus DSB AM voice.
And they say you can't teach an old dog new tricks. :-)

3021. GB2RS News 20th August 1995

Newsgroup: rec.radio.amateur.misc
Date: 1995-08-17 00:00:00 UTC
From: David Hough <dave@llondel.demon.co.uk>
Message-ID: <808707866snx@llondel.demon.co.uk>
Source record: 240359
Cross-posted to: uk.radio.amateur,rec.radio.info,rec.radio.amateur.misc

Good morning. It's Sunday the 20th of August and here is the GB2RS news broadcast, prepared by the RSGB and intended for all radio amateurs and short-wave listeners.

We start this week with the news that tropospheric conditions have once again affected all the VHF and UHF bands, due to the anticyclone centred over the UK. Colin, GM0CLN, took advantage of this to work 7S6AG, a special event station at the World Athletics Championships held in Sweden. And G4NVD, a GB2RS newsreader in Grimsby, reports being called back with reception reports from Denmark, the Netherlands, Belgium and all over the UK after reading the news on the 6th of August. On the 9th of August he also made contact with SM7URN at a distance of 980 kilometres while using less than half a watt of SSB on 2 metres.

The RSGB National Convention at the Stafford Amateur Radio and Computer Show is taking place this weekend, the 19th and 20th of August, at the County Showground, Stafford. In addition to a large trade show, the event features on-demand Morse tests, demonstrations, special interest groups and a bring and buy sale. There is a large RSGB book and information stand, including an exhibition of photographs of historic radios and events, with the emphasis on Marconi. RSGB committees are also in attendance. An official show guide is published in the August Radio Communication.

The Radio Amateur Invalid and Blind Club, Northern Ireland area, wishes to acknowledge and thank the members of the Mid-Ulster Amateur Radio Club for their co-operation and time in arranging a street collection recently on behalf of RAIBC Northern Ireland. The proceeds will be used to purchase radio equipment in the province.

The IEE will be staging an International Conference on 100 Years of Radio at Savoy Place in London between the 5th and 7th of September, at which a number of radio amateurs will be making significant contributions. One of the sessions, entitled "Tuning and the Amateur", is chaired by RadCom 'Technical Topics' columnist Pat Hawker, G3VA. It will include a paper called "Amateur Radio - Past, Present and Future" by G3ZCZ, which will be presented by Richard Limebear, G3RWL. Other contributors include Professor Martin Sweeting, G3YJO, from the University of Surrey UoSAT programme; and Cecil Ramsbottom, G3BZQ, who will present a paper called "The Era of the Home Wireless Constructor". For further details contact IEE's Conference Services on 0171 344 5477 as soon as possible.

The RSGB International HF Convention will take place at Old Windsor in Berkshire on the 9th and 10th of September. The event will feature

lectures and presentations from some of the world's top HF operators and DXers, including Martin Atherton, G3ZAY, who will give a talk on "Sunspots and Propagation". The talk will describe how sunspots affect HF propagation, why they run in 11-year cycles, how to measure them and how to tell when a new sunspot cycle has started. Martin will also explain the mysteries of the 'A' and 'K' indices. There will be a 48-hour contest station operating in the WAE phone contest and, for the first time, DXCC QSL card checking will be available at the convention. Further details of the RSGB HF Convention and a synopsis of the lectures are published on pages 20 and 93 of the August RadCom. Details of the lecture programme and a booking form can also be obtained from Marcia Brimson at RSGB Headquarters on 01707 659015.

Now some items of HF DX news from the weekly RSGB DX News Sheet, which is edited by Chris Page, G4BUE:

From West Malaysia, Neville, G3NUG, is signing 9M2/G3NUG until Monday the 21st of August. He is operating from an island which counts as AS-073 for the RSGB IOTA awards. Check around 14260 kHz on SSB.

From Syria, ZP5ALI is planning to be active as YK1/ZP5ALI from Tuesday the 22nd, until the 27th of August on 10, 15 and 20 metres SSB.

And from Italy, the special station IY1MR is active now, until the 10th of September, during a Marconi 100th anniversary exhibition organised by the ARI Rapallo Section and the Marconi Foundation. The station is active on VHF and UHF as well as all HF bands.

Now news of some special event stations:

The North Norfolk Amateur Radio Group is operating GB100NT from Sheringham Park this weekend, the 19th and 20th of August, in order to celebrate the 100th anniversary of the National Trust. Next weekend, the 26th and 27th of August, the Swansea and Port Talbot clubs will operate GB100NT from Aberdulais Falls.

GR0VLB will be on the air on Fridays, Saturdays and Sundays throughout August, representing the Voluntary Life Brigade in Sunderland.

The Braintree and District Amateur Radio Society is operating GB2OAY from Andrews Field Aerodrome from Friday the 18th until Sunday the 20th of August. The club is celebrating its 20th anniversary, and details of a 20th Anniversary Award can be found in the May edition of RadCom.

The Bangor and District Amateur Radio Society in Northern Ireland is operating GR4GPF from Grey Point Fort between 10.00 am and 4.00pm this weekend, the 19th and 20th of August.

The Leicester Radio Society is operating GB5VJ during its open days this weekend, the 19th and 20th.

The Aberystwyth and District Amateur Radio Society is operating GR0ARA today, Sunday the 20th, from the Aberystwyth Model Club's annual event at Blaendolau Fields, Aberystwyth.

GB2SGS will be on the air from "MOOT 95", a camp for over one thousand Scouts and Guides at the Suffolk Show Ground, near Ipswich, from Friday the 25th until Monday the 28th of August. The station will be mainly on 80 and 40 metres SSB and CW, and on 2 metres and 70cm SSB and FM.

The Barry Amateur Radio Society will be operating GB5FI from Flat Holm Island in the Bristol Channel, along with members of the Passau Radio Club from Bavaria, from Friday the 25th of August, for five days. The station will be active on HF and VHF, and modes will include Amtor and Pactor.

Next weekend, the 26th and 27th of August, is the Northern Lighthouse Weekend, when eleven Scottish special event stations will be active from lighthouses. The stations will be located in the Shetlands, Orkneys, Outer Hebrides and mainland Scotland, and will use the callsign GB2L followed by one or two letters indicating the name of the lighthouse. Activity will be between 0800 UTC on Saturday and 1700 UTC on Sunday, on 10 to 40 metres, SSB only. A list of the stations participating can be found on page 33 of the August RadCom and further information can be obtained from Mike, GM4SUC, on 01292 443127. And a special event station in Queensland, Australia with the unusual callsign "VI50 Peace", that's "V I Five Zero P-E-A-C-E", is active throughout August, September and October.

Next the Rally News:

The Great Eastern Rally takes place at The Cattle Market, Hardwick Narrows, near King's Lynn in Norfolk today, Sunday the 20th of August. The event features a car boot sale, and a spacious indoor area with national exhibitors and a bring and buy stall. Talk-in will be on 2 metres channel S22.

Also today, the 20th, the West Manchester Radio Club is holding the Red Rose Rally at Silverwell Street, Bolton. Doors open at 11.00 am, or 10.30am for disabled visitors, and talk-in is on 2 metres channel S22.

The Amateur Radio Caravan and Camping Club rally takes place at Stratford upon Avon between the 25th and 28th of August. For further details telephone 01462 811208.

A computer and radio rally will take place on Saturday the 26th of August at Manchester University Refectory Hall, Oxford Road, Manchester. For further details call 0161 627 2502.

The Galashiels and District Amateur Radio Society will hold an open day and radio rally at the Focus Centre, Livingstone Place, Galashiels next Sunday, the 27th of August. The event features traders, club stalls, a bring and buy stand, raffles and refreshments. For further information contact John Campbell, GM0AMB, on 01835 822686.

The Coleraine and District Amateur Radio Society's annual rally will take place at the Lodge Hotel, Coleraine, next Sunday, the 27th. The event features a large number of traders, and doors open at midday. For further details, contact GI8LTB on 01265 58664.

And the Torbay Amateur Radio Society rally will also take place on Sunday the 27th, at Clenon Valley Leisure Centre, Paignton, in Devon. The event features traders, special interest stands, a bring and buy stand, and a restaurant and bar. Details from John, G3YCH, on 01803 842178.

The Huntingdonshire Amateur Radio Society Bank Holiday Monday Rally will take place on the 28th of August at St Peter's Road, Huntingdon. The event features two halls and a car boot sale. For further details contact David, G7DIU, on 01480 431333.

And the annual Wight Wireless Rally will take place on Saturday the 2nd of September at the National Wireless Museum, Arreton Manor, Newport, Isle of Wight. The event features traders, a bring and buy stand, and free admission to the National Wireless Museum. The doors will open at 11.00 am and talk-in will be on 2 metres, channel S22. Further details are available from Douglas Byrne, G3KPO, on 01983 567665.

There is a proposal for a new 70 centimetre speech repeater. The proposal is for GB3TC to operate on channel RB1 from Wincanton, Somerset.

Now for the HF contest news:

There are no RSGB HF Contests either this weekend or next weekend, but the Japanese KCJ CW contest is taking place this weekend, the 19th and 20th of August. Brief rules are on page 22 of the August Radcom.

And the South-East Asian "SEANET" SSB contest is also taking place this weekend. Brief rules are on page 20 of the July RadCom.

Next some VHF contest news:

The RSGB 432 MHz Fixed Station and 432 MHz Listeners contests takes place today, the 20th of August, between 1700 and 2100 UTC. The rules are in the May edition of RadCom.

And now the solar factual data:

The period from the 7th to the 13th of August saw solar activity at very low levels, and geomagnetic levels quiet to unsettled. The mean Sunspot number for the period was 17, but on the 9th the solar disc was spotless. Solar flux levels declined slightly from 74 units on the 7th, to 71 units by the 13th, with an average of 73 units. No solar flares were reported. The electron fluence increased from moderate levels to high levels on the 9th, whilst the X-Ray flux remained steady and averaged A2.6 units. The 90-day solar flux average on the 13th was 75 units.

Geomagnetic conditions increased from quiet levels on the 7th to active levels, with an Ap index of 19 units, on the 9th. This was due to a recurring coronal hole. Levels then declined to quiet conditions for the rest of the period, with an average of Ap 13 units. The aa indices, as supplied by the British Geological Survey for the period from the 1st to the 7th of August, saw conditions at very quiet levels, with only 6.1

nanoTeslas on the 6th. The most disturbed day was the 7th, with 13.0 nanoTeslas. The average for the period was 10.2 nanoTeslas, just K2.

I'll repeat the figures: spots - 17, flux - 73, Ap index - 13, X-Ray flux - A2.6

Now the ionospheric data for Central France.

The F2 daytime critical frequencies at Poitiers, as reported by Meudon for the period from the 4th to the 10th of August, averaged 6.7MHz. Levels increased from 6.3MHz on the 4th, to 7.8MHz on the 7th, before declining to 6.1MHz by the 10th. The darkness hour lows remained steady and averaged 3MHz. The daytime highs took place between 1900 and 2000 hours, with the darkness hour lows between 0300 and 0400 hours every day.

Very little sporadic E was reported as we approach the end of the summer 1995 season. Also, seasonal effects will begin to take place with the daytime highs taking place earlier in the evening as the days shorten in the northern hemisphere.

I'll repeat the figures: highs - 6.7MHz, lows - 3MHz.

And lastly the solar forecast.

This week the quieter side of the sun is expected to be looking our way. Solar activity should be very low, and solar flux figures around the low 70s. Geomagnetic activity is expected to be very quiet, but could be up to active levels today or tomorrow. Ionospheric MUFs during daylight hours are expected to be about 18MHz for the south and 16MHz for the north. The darkness hour lows are expected to be about 11MHz. Only small sporadic E openings, particularly on 28 and 50MHz, are expected in the coming week.

And that's the end of the solar information.

Finally in the main news, SSL has informed the Society that as of last Wednesday morning, the latest callsigns allocated were in the G0 Whisky Juliet and G7 Victor Oscar series, and Novice calls in the 2 0 Alfa Mike and 2 1 Echo India series.

I have the problem with the receiver part of the transceiver Drake TR7
serial number 6052. The audio reproduction is not clear compared with
the other trtx connected to the same antenna and tuned to the same signal.
I don't know if it is a fault of the my rtx , or the rtx produced at a certain
period, and if successive versions have eliminated the problem, and how.
Is anybody able to help me?

Tanks in advance

My e-mail address is: maurizio@caramba.ico.olivetti.com

3024. Re: The Word Mayday

Newsgroup: rec.radio.amateur.misc
Date: 1995-08-17 00:00:00 UTC

Richard McAllister, rfm@urth.eng.sun.com writes:

> Fascinating. Does anybody know where "Pan-Pan" comes from? I know
> "mayday" is from "m'aidez", French for "Help me!", and I see
> ["Securite"] is just French for "Safety". But "Pan-Pan" is baffling.
> It's certainly an attention-getting sound.

The French PAN PAN in the urgency signal means TO ALL TO ALL.

If it were French 'pain, pain', pronounced almost the same, it would
mean English 'bread, bread', probably most unhelpful. :-)

Equivalent expressions, telegraphy/voice are

type: telegraphy: voice:

distress <SOS> <SOS> <SOS> MAYDAY MAYDAY MAYDAY
urgency XXX XXX XXX PAN PAN PAN PAN PAN PAN
safety TTT TTT TTT SECURITE SECURITE SECURITE

<SOS>, dashes extended, not faster than 16 wpm. Parts 80.314-80.333
are exquisitely specific about what goes into a distress, ugency or
safety call, voice or (well, used to be) manual telegraphy, as well
as any replies or relays.

USCG sez they ain't listening anymore on 500 kHz, but if my boat were
sinking, I'd blast out on 'every means available', old CW freqs
included, and hope somebody hears me. Bet USCG still are listening,
just not officially. Or else, some ham who knows what he's hearing
and QSPs USCG RCC.

Voice procedures are still very much in use, all bands.

The experience of ops Jack Phillips and Harold Bride of blessed
memory aboard RMS Titanic, 14/15 Apr 1912, is the reason. Present
day would-be deregulators of radio spectrum should remember the chaos
prior to the FRC and later FCC, IMHO, responsible in great part for
the disaster.

GMDSS imposes some new rules. See now Part 80 Subpart W.

I think every competent ham operator should know Part 80 in addition
to Part 97.

The best way to get info you need is to contact Greece Radio Amateur Club
in Athens or any other major city.
Greece has been one of leaders in satelite communications on Ham Bands
and SV1AB George (profesor of Athens University) was formost operator
on VHF/UHF.
When you walk or drive around, observ rooftops and if you see strange
antenna on the roof or tower - ring the bell.......

>

According to my read of the rules, the auxiliary station is the *patch* station, because the primary station is the one that has the control operator present (that is, you on that HT). So in that instance, the auxiliary station has to be transmitting to you on 222 or above. Some people read the aux station rule to be the opposite direction (HT is the aux station). Either case, of course, immediately makes a 2m personal patch illegal.

On conventional repeaters, though, a wrench is thrown into this, because autopatches become an *ancilliary* (not auxiliary, and not the primary) function. As long as other means exist to control the repeater (auxiliary link 222 or above, hardwired control), 2m autopatches are OK.

In neither case is control completely automatic at the patch station. The "3rd party traffic" is under complete control of the person on the radio who intiated the patch. The repeater user is exercising limited remote control of the repeater station, while a control operator (actively participating or just listening) can take over at any time and supercede the 2m user's control. In a personal autopatch, the existing interfaces give the operator complete control over the link, including the simplex patches, which drop the patch transmit momentarily to poll the freq for control.

But, in the end, it all comes down to what you're going to a Notice and/or "pink slip" for. As a member of the FCC Amateur Auxiliary (yes, an "Official Observer" [while he ducks the tomatoes]), I certainly won't bug anybody about using a 2m autopatch as long as everything else is Kosher. And I won't hassle anybody over a personal autopatch - if it clearly wasn't legal, then CSI wouldn't be in the market selling 'em.

But I will "write-up" a simplex autopatch if I find it below 222.

It's all gray areas, and we're all sea lawyers, I guess, dealing with gray areas that are intentionally ambiguous. But I think the shade of gray is pretty dark on the simplex autopatch thing, and I s'pose it's my "job" to

be up on the Rules.

I wish to offer a thank you from myself and many other operators of
the 1995 World Scout Jamboree Radio Station (PA6WSJ) for the contacts
and at times helping a homesick scout feel better by being able to talk
to someone from his or her country. The station was active 24hrs/day and
was active on many bands. Many assigned amateurs from The Netherlands and
other countries put in long hours with the ultimate goal to help other scouts
experience amateur radio. I was a guest operator most nights and could
not have accomplished our goal without the help of you, our fellow HAMS.

For those who were not able to contact use, but could hear us, I apoligize
and explain having multiple radio transmitters running different bands
in close proximity of each other. (20 M noise from Dronten, the Netherlands
was S-5 to S-7 complicated communications also!)

The next Scout radio event is JOTA, Jamboree On The Air, in October. Keep
watching for more info.....

Yours in Scouting,
Mike KB9KFE

> myself). Tell them what you want on the badge and they'll
> cut it on the spot.
I mean badges, as in metal, security/police/fire/ems type badges.. I already have a name-plate.
I've never seen one of these people selling _badges_ since they require all sorts of setting equiptment.

> BTW, most large towns have at least one "speciality" store

Didn't think of that though.

No information can be carried by CW unless one modulates the carrier amplitude and/or phase. The Morse modulation can be represented by it's Fourier series equivalent sum of sine waves, just as a human voice can. I agree, "You can't modulate a carrier when it is turned off" but you can't send Morse code either when it is turned off. :-)

So AM is alive and well on the HF CW bands (yeah, I know "HF CW" is redundant for ham frequencies).

3032. UMARS Balloon Launch!

Newsgroup: rec.radio.amateur.misc
Date: 1995-08-17 00:00:00 UTC
From: pehn@cc.umanitoba.ca
Message-ID: <4109gd$pge@canopus.cc.umanitoba.ca>
Source record: 240370

UMARS Balloon Launch!!!

The University of Manitoba Amateur Radio Society is launching a
balloon with an amateur radio payload on Saturday, August 19, 1995
at 9:00am from the area of Omands Creek Road and Brookside Blvd in
the city of Winnipeg, Manitoba.

Frequencies of interest are:
a 10 meter beacon on approximately 28.08 MHz
and APRS and packet running on 145.790 MHz

Special QSL cards will be issued for all packet contacts.
A packet contact will consist of you connecting through your TNC
to the TNC on board the payload. The TNC will then send your
callsign back to you and disconnect you.

We are intending to retrieve the payload and will be co-ordinating our
fox hunting efforts on VE4UMR or VE4MAN to start and then moving to
various other repeaters and links depending on where the balloon leads
us. Any help from monitoring stations will be greatly appreciated.

We expect the balloon to be in the air for roughly 4 hours maximum and
to reach an altitude of about one hundred thousand feet.

If winds are not favorable the launch may be postponed or canceled
until a new time and date can be arranged.

Many thanks the people at Akjuit Aerospace, Environment Canada, Linette
Geomatics and Bristal Aerospace for the help and support we have
received throughout the duration of this project.

Hi,

The ARRL (American Radio Relay League) sells a truly exellent book,
titled "The ARRL Satellite Experimenters Handbook" for $20 (plus
shipping, typically $4). It has all of the details you need to
get up and running on the Amateur Radio satellites. (They sell
another titled the "Weather Satellite Handbook" for those interested
in those satellites.) To order, call the ARRL Publications Department
at (203) 594-0200. Hope this helps. It really is THE resourse book
for Amateur Radio satellite operators. It covers tracking, hardware,
details on each of the many Amateur satellies, their launch date,
operating frequencies, and leads to further information. Enjoy!

Even if the patch is not considered a remote control (auxilary) function,
it is still passing third party traffic. This requires at least a
"designated control operator" to be at a control point for the repeater.
If the user is just that, a user, and not a control operator, he doesn't
fufill this requirement in my read. I don't have a problem with any two
meter phone patch, I guess I am just wondering if most repeater control
ops monitor and control their repeater when the patch is enabled and
available to users.

Don't have a problem with this - but you are saying that the control operator is monitoring the repeater at a control point, right? The user has to be designated a control operator by the repeater licensee to meet the requirements - right?

>But, in the end, it all comes down to what you're going to a Notice and/or

CSI could still sell them even if all phone patches were illegal in amateur radio - they sell plenty of equipment to users of other radio services.

>But I will "write-up" a simplex autopatch if I find it below 222.

Before you know all of the facts? Third party traffic is allowed on two meters. There just has to be a control point for the radio transmitting that traffic. If it's not a local control point, it must be a remote control point. If remote control is by radio link (it could be wireline), the control point has to be an auxilary station. Sounds like a legit use for a dual band radio - conduct your simplex patch on two meters but maintain your control point above 222.

>It's all gray areas, and we're all sea lawyers, I guess, dealing with gray
>areas that are intentionally ambiguous. But I think the shade of gray is
>pretty dark on the simplex autopatch thing, and I s'pose it's my "job" to
>be up on the Rules.

I really don't think it's that grey at all. To answer the original question, if a simplex patch is legal - Yes (and I have used one on two meters - not as a control op - but a user). It's just that the black and white answer cannot be found in just one paragraph of part 97. But can the FCC walk in one day and say no one can have a patch? Where in part 97 is interconnect to the public telephone network, for the purpose of placing calls, allowed?

This is just how things seem to me...

Source record: 240379

I went to a local ham store today to ask about a power amp for my marine HT. The guy at the store said the RF Concepts amp for 2m "will not work". I asked him if he ment that there is some kind of attenuation above the 2m band, or if he ment that the amp is rated at 30 watts output in 2m, but will be less output above this band. His reply was a scowl and "It will not work." Help! Any improvement in power will help when I'm on a lake like Powell.

A more technical and/or complete answer will be GREATLY apreciated! Also, any suggestions for more power would help!

Thanks,
Dave

>It's just a lot less than meets the eye....

The presence or absence of the carrier *is* the modulation; though
it has been said before, imagine for a moment an AM transmitter
that is modulated with a baseband digital signal of a low
baud rate. That's Morse coded CW. It is just the same
as modulating the carrier with an audio tone, except the
modulation shape and frequency are different. *All* of rules
still apply. Have a look at the discussion in the ARRL Handbook;
my 1994 copy explains this all pretty well.

To all radio amateurs

SB DX ARL ARLD044
ARLD044 DX news

This week's bulletin was made possible with information provided by Tedd, KB8NW, Rolf, SM5MX, Hans, K0HB, Bruce, WA3RHW, Bob, N8CW, K6URI, W3HG, Joe, NJ1Q, the OPDX Bulletin and Contest Corral from QST. Thanks to all.

LAOS, XW. Andreas, DK9LM and ex-TA1ZE, is in Laos for 20 months and will try to obtain a license to operate.

MADAGASCAR, 5R. Shun, JF1MGI/VK9MG, will be in Madagascar until the end of September to conduct medical studies, specifically the ecosystems of rare animals. Radio activity will be concentrated during the third week of September using the call sign 5R8EU, with an emphasis on RTTY, PacTOR and low bands. QSL to his home CBA.

UNITED ARAB EMIRATES, A6. Listen for newly licensed amateurs A61AI and A61AM.

SLOVENIA, S5. A recent PacketCluster QSN reported Baldur, DJ6SI, operating S5/DJ6SI on 7005 kHz around 2230z.

THAILAND, HS. HS7CDI and 7L1MFS will sign HS2/7L1MFS from the Samet Islands, AS-107, August 19 and 20. Check IOTA frequencies. QSL via 7L1MFS.

LIBYA, 5A. It has been reported that there are three operators at the 5A1A club station. Check 7005 kHz at 2000z for CW and 14207 or 14243 for SSB. A station signing 5A/G0UCT showed Friday on 14020 kHz between 1515 and 1630z. This station was a slim.

DXPEDITION NEWS. Ali, ZP5ALI, will be on the air from Syria as YK1/ZP5ALI August 22 to 27, from Egypt as SU1/ZP5ALI August 28 to September 3 and Lebanon as OD5FR September 4 to 14. He will run SSB on 20, 15 and 10 meters. QSL to Fagues Rahal, Avda Pacheco 5257,

Asuncion, Paraguay.

VIETNAM, XV. Rolf, SM5MX, aka XV7SW, is back home in Sweden. He heads back to Hanoi on August 26. Contrary to earlier reports, he was not active on 160, 80 or 40 meters, though he has plans to install antennas for these bands upon his return to Hanoi. Installing CW filters in his rig is also on the To Do list. XV7SW QSL cards were printed and Rolf plans to start sending out cards in September.

ARUBA, P4. Jack, N2VW, will be signing P40T from Aruba September 5 to 12. He will be in on the WAEDC SSB Contest action. QSL this operation of P40T via N2VW with SASE/SAE with postage.

TURKS AND CAICOS ISLANDS, VP5. PA3ERC, PA3EWP, PA3BBP and PA3FQA will be signing /VP5 from Providenciales Island September 7 to 26, all bands/modes. They will sign VP5C for the WAE SSB and CQ WW RTTY contests. QSL via PA3ERC.

SAINT MAARTEN. Mike, K6URI, will be operating as PJ7/K6URI September 9 to 23 on 40, 20 and 15 meters. Extra effort will be made to work novices on 40 meters. QSL via K6URI w/SASE or postage. All novices will receive cards, regardless of SASE/postage status.

BERMUDA, VP9. Don, W4ZYT, plans on being active from Southampton Parish as W4ZYT/VP9 September 16 to 22. Activity will be mostly CW on 40 through 15 meters.

WAKE ISLAND, KH9. Tom, AL7EL, will be active as KH9/AL7EL in late October.

QSL NOTES. Bob, N8CW, reports receiving cards for V44KAQ, though he is not and has never been QSL manager for this station. QSL V44KAQ direct. K2AOQ is receiving cards for V44KAO. He, too, is not the QSL manager. QSL V44KAO direct.

W3HG is receiving QSL cards for C53HG. The correct QSL manager for C53HG is W3HCW.

Mike, K6URI, has been receiving cards for the July 1995 operation of P40Z, though this was NOT his operation. The P40Z operation by K6URI was the SSB WPX contest for March 1992 ONLY. Mike will return cards received with SASE/postage but cannot send back those without same.

QSL's for Hamad, 9K2HN should now go via the bureau or direct to Hamad J. Al-Nusif, PO BOX 29174, 13152 Safat, State of Kuwait.

THIS WEEKEND ON THE RADIO. Take your pick as there appears to be something for nearly everyone. Details on the ARRL 10 GHz Cumulative, KCJ, and SARTG Worldwide RTTY contests, and the New Jersey and North American QSO parties appear on pages 114 and 115 in July QST. Info on the European DX Contest CW is on page 119 in August QST.

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 17/2330Z AUGUST 1995 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 17 AUGUST AND FORECAST FOR 18 AUGUST - 20 AUGUST

1A. SOLAR SUMMARY
Activity: Very low

Flares: None

Observed 10.7 cm flux/Equivalent Sunspot Number : 70/5

GOES satellite data for 16 Aug
Daily Proton Fluence >1 MeV: 3.8E+05
Daily Proton Fluence >10 MeV: 1.7E+04
Daily Electron Fluence >2 MeV: 2.7E+09 (very high)
X-ray background: A1.3
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
18 Aug 19 Aug 20 Aug
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 18 Aug: 72/8

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: Quiet to unsettled

Estimated Indices : A K Observed A Index 16 Aug
Learmonth 12 3323 3322
Fredericksburg 14 13
Planetary 12 12

Observed Kp for 16 Aug: 3443 2212
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
18 Aug 10 Quiet to unsettled
19 Aug 10 Quiet to unsettled
20 Aug 15 Quiet to unsettled, with active to minor storm
periods later in the day

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND

DATE LOW MIDDLE HIGH
17 Aug normal fair-normal fair-normal
PCA Event : None.

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
18 Aug normal fair-normal fair-normal
19 Aug normal normal normal
20 Aug normal normal normal

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Observed
DATE T index MUFs at Sydney
17 Aug 8 Near predicted monthly values, with sporadic E
present from 02-05 UT and spread F from 19-20 UT.

Predicted Monthly T index for August: 15

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T index MUFs
18 Aug 15 Near predicted monthly values, with sporadic E and
spread F likely.
19 Aug 15 Near predicted monthly values
20 Aug 15 Near predicted monthly values

COMMENT:
Darwin MUFs: near predicted monthly values with blanketing sporadic
E at 12 UT.
Townsville MUFs: near predicted monthly values with blanketing
sporadic E at 09 UT.
Hobart MUFs: near predicted monthly values with spread F observed
through the night hours.

Is this entire thread about whether or not continuous wave telegraphy (as in the emission designator A1A) is a form of modulation? It is...at least legally it is. The technoid bunch can keep arguing over it for the rest of their lives as far as I am concerned.

If you are keying carrier with digital or quantized information (ie: Morse code) it is considered amplitude modulation. Necessary bandwidth can be calculated for a A1A signal (100 Hz bandwidth is necessary for 25 wpm).

There is no calulation for bandwidth of an unmodulated, continuous wave (N0N) emission (at least not for necessary bandwidth). As soon as you start keying that emission with information, it's considered to be modulated. If it's taking up bandwidth, it's modulated - in my book.

I missed the beginning of this thread (it expired here). What does all this have to do with the subject of "CW, we need it"?

3049. UMARS Balloon Launch Postponed

Newsgroup: rec.radio.amateur.misc
Date: 1995-08-18 00:00:00 UTC
From: pehn@cc.umanitoba.ca
Message-ID: <41324c$na7@canopus.cc.umanitoba.ca>
Source record: 240187

UMARS Balloon Launch Date Moved!!!

Due to high winds and low clouds the launch of the University of
Manitoba Amateur Radio Society's Balloon Experiment has had to be
postponed until Sunday, August 20, 1995 at 9:00am from the are
of Omands Creek Road and Brookside Blvd in the city of Winnipeg, Manitoba.

Frequencies of interest are:
a 10 meter beacon on approximately 28.08 MHz
and APRS and packet running on 145.790 MHz

Special QSL cards will be issued for all packet contacts.
A packet contact will consist of you connecting through your TNC
to the TNC on board the payload. The TNC will then send your
callsign back to you and disconnect you.

We are intending to retrieve the payload and will be co-ordinating our
fox hunting efforts on VE4UMR or VE4MAN to start and then moving to
various other repeaters and links depending on where the balloon leads
us. Any help from monitoring stations will be greatly appreciated.

We expect the balloon to be in the air for roughly 4 hours maximum and
to reach an altitude of about one hundred thousand feet.

If winds are not favorable the launch may be postponed or canceled
until a new time and date can be arranged.

Many thanks the people at Akjuit Aerospace, Environment Canada, Linette
Geomatics and Bristal Aerospace for the help and support we have
received throughout the duration of this project.

Matt Fahey, EI5CB, a friend of mine who is an operator at North East Atlantic Search and Rescue (Valentia Radio) has a 757GX and he says that every now and then the radio just changes frequencies on its own.

Can someone tell me:

Was this a problem with the GX and got fixed in the GXII?
Could it be a battery problem?
Any other ideas?

Thanks in advance

>control when passing third party traffic?

That's correct. A 2m repeater with a patch can't be under automatic
control during third party patch operation. A control operator must
be present and in positive control of the station. That can't be the
user on the input channel, control must be local, wireline, or on a
UHF frequency operating under Auxillary rules.

There are probably a bunch of repeaters in violation of this rule
in the middle of the night. There are some trustees who turn off
the patch access when they go to bed, but a lot probably don't.

3054. CC&R restrictions

Newsgroup: rec.radio.amateur.misc
Date: 1995-08-18 00:00:00 UTC
From: warthog@ccnet.com
Message-ID: <4125n5$s3@ccnet3.ccnet.com>
Source record: 240192

I've read all the posts about CC&R restrictions. Whether one thinks they are the sacred rights of the seller, or they are interfering with the rights of the buyer, there is no denying they can be used as an economic 'stick'. I've bought, and put in offers, on several homes over the years. I love to see the real estate agents face when I inform them that they need not show me any homes with restrictive CC&R's, or HOA's. I also make it a point, being a well qualified buyer, to drop by the models at the new subdivisions, and ask about CC&R's. People here are correct in that the CC&R's used are boiler-plate, and I find most of the representatives at the models have to look them up themselves, not really having any knowledge of them. Well, it is also fun to see their faces when I tell them, "No thanks" after they spend the time finding then reading to me from the contract. I often get offers that they can find someway to work around them! I think more of us hams ought to do this, let the real estate agents, developers, and sellers know they are locking themselves out of an important chunk of the market by using the same, tired old CC&R's with no thought whatsoever. I won't compromise, and have never bought a house with restrictive CC&R's. The ARRL, or some national ham organization should take it as a sacred duty to educate all the great unwashed mass of hams so none of them buy a home only to find they can't put up on their own home something so central and important to their hobby.

What do you mean, "is not clear"? Do you mean the frequency response is
not flat across the bandwidth of the filter in use, or do you mean that
the audio is distorted, or do you mean that the signal is weak and noisy,
etc? More information please. Detail the symptoms, and the conditions under
which they appear, and we'll try to help.

Gary

Hey, everyone - on behalf of Dimitri, RA9CO, who will be visiting
the states for a portion of September, I'm looking for NYC area
exams for the date 16 September 1995. He will actually be staying
at a hotel near Central Park (it's his honeymoon) so the easier
it is to get there, the better.

Can anyone help? Please let me know!!!

Curtis -

>
> This is the correct read of the rules. An auxilary station is the
> control point of an associated station under radio linked, remote
> control.
>
> (Note: ANY amateur station may be remote controlled)

Good points, and I can't dispute your (or Gary's) take on the auxiliary station thing. The definition of "auxiliary station" in the Rules is so completely vague as to be useless. In researching for this discussion, I was poring through the Rules and my flip-flop of which end of the "system" comprises the auxiliary station was prompted by the Subpart A definitions. In some ways it's a shame we have to resort to debates about context in this way, in other ways we ought to be glad the regulations are so accommodating.

But I will still cite a 2m simplex 'patch, AFTER I've looked really, really hard for evidence of control occurring in the proper areas. In a practical sense, if I hear a simplex/personal 'patch, it is very likely that only one radio (band) is available at either end of the link. In the conjectured scenario of two bands at both ends (voice link/control link), the user would/could have the more preferred full-duplex system.

If I hear everything transpire on the same 2m frequency including all evident control, and there is no clear indication that a control op is in attendance, that's a pretty strong indication that the control operator and aux station Rules are being ignored.

Anyway, an Advisory Notice isn't the end of the world - it's just a nudge to make sure everything's on the up-and-up.

3064. This Week in Amateur Radio #125 (for air through 8/25/95)

Newsgroup: rec.radio.amateur.misc
Date: 1995-08-18 00:00:00 UTC
From: "Stephan M. Anderman" <sanderman@delphi.com>
Message-ID: <prKBj4k.sanderman@delphi.com>
Source record: 240202

Here is a summary of news items covered on edition #125 of
"This Week in Amateur Radio", North America's satellite-delivered
audio bulletin service, for the week ending 25-Aug:
-
1. FCC Seeks Privatization of RFI Complaint Resolution Process
2. Senator Lauds OKC Amateurs in Congressional Record
3. Amateurs Ready as ARRL Tracks Progress of Hurricane Felix
4. RSGB Announces Dues Increase, Break for Seniors and "Juniors"
5. LA Amateur, Former City Councilman and Judge a Silent Key
6. Time Change Announced for "This Week in Amateur Radio"
7. "The RAIN Dial-up" from Chicago
8. Weekly Propagation Forecast with George Bowen, N2LQS
9. "Gateway 160 Meter Net Report" with Vern Jackson, WA0RCR
10. Upcoming Special Event Stations
11. "Amateur Radio Newsline" - Edition #939 from Los Angeles
12. Financial Support for "This Week in Amateur Radio" Dwindles
-
Satellite time and uplink equipment have been provided by SKYVISION
as a service to the amateur radio community. Funding to access
"Newsline" was provided by a grant from the Stoddard family and
users of the KF9MP repeater system in North Webster, Indiana.
-
"This Week in Amateur Radio" is a weekly amateur radio news and
information service, in audio newsmagazine format, which is produced
by Community Video Associates, Inc., a New York State not-for-profit
corporation based in Albany, New York. The program is carried on
the "Tech Talk Network" each Saturday at 7:30 PM (EDT) on the
Telstar 302 commercial communications satellite, transponder 21
(11V), 5.8 MHz wideband audio (4.120 GHz), located at 85 degrees
west longitude in geosynchronous orbit, and can be heard on various
VHF/UHF repeaters throughout the United States and Canada, as well
as on 160 meters at 1860 kHz. Contact your local amateur radio club
or repeater operator if "This Week in Amateur Radio" is not being
heard in your area.
-
Production and transmission expenses are underwritten by
contributions from repeater system operators, amateur radio clubs,
and individuals. For further information, contact George Bowen,
N2LQS, at 518/283-3665, or Stephan Anderman, WA3RKB, at
518/664-6809. You may also reach them via amateur packet @
WA2UMX.FN32AW.ENY.NY.USA.NA or on the Internet to KXKVI@DELPHI.COM
or SANDERMAN@DELPHI.COM.

>auxiliary station has to be transmitting to you on 222 or above. Some
>people read the aux station rule to be the opposite direction (HT is the
>aux station). Either case, of course, immediately makes a 2m personal
>patch illegal.

NO! Patches are legal even at HF. So the fact that the station has a patch isn't the primary issue. The station with the simpatch on it is operating under the *Remote Control Rules*. You can operate *any* station under remote control on *any* band. The *control link* must be done under auxillary operation, and above 222 MHz, if by radio (the control link can also be wireline of course). Automatic control is *never* permitted for a station operating under remote control, so that doesn't even enter into the picture.

(Automatic control is limited to repeaters when not carrying third party traffic, to packet stations doing automatic relay, and to beacon stations, all of which have their own special rule sections. The simpatch station doesn't fall under any of these sections. It's just an ordinary amateur station operating under remote control, IE a remote base that happens to have a patch.)

Now, you can run both ends of the voice link for the patch on 2m if you like, but you have to *control* the remotely controlled station on 222 MHz or above. That basically means that to use the patch as control operator, you need two radios at each end. But if you have the simpatch station on 222 MHz or above, then you can control it with the same radio you're using to conduct the patch. Since that's easier, its the right way to do it. But if you don't mind the extra radios, you can operate the simpatch

station on 2m, or any other band, including 20m or 75m if you're crazy enough to do that.

The rules permit you to do anything with a remotely controlled station that you can do with a station under local control, including running phone patches. There's nothing grey about this at all.

3070. 2m Transverter Question

Newsgroup: rec.radio.amateur.misc
Date: 1995-08-18 00:00:00 UTC
From: smithson@rosharon.wireline.slb.com
Message-ID: <412fke$1f0@sndsu1.sedalia.sinet.slb.com>
Source record: 240208

I am considering buying a transverter to work 2m SSB. I've only seen one supplier and that's Down East Microwave. They offer a 144-28 Mhz version with 25 watts out. Has anyone used a transverter and if so, what were you're impressions? Sounds too good to be true. $400 versus $1600 for an all mode VHF rig.

What are the limitations of such a set up? Can you do FM or is the FM from an HF rig "different"?

I am planning to use it with a Kenwood TS-850 SAT. If you've used anything like this, I would appreciate your input.

John,

The new security measures were not in effect a month ago. Has anyone taken an HT through airport security since the beefed-up airport security measures were instituted a couple of weeks ago?

Stop at YOUR customs station before you leave the country and show them what you have. Get a receipt there. (At least that's what the Canadian customs does for us when we go south with gear we bought up here). That way, you can show the receipt upon re-entry to your country.

Nope. More likely it's that the Canadian Customs guys are just used to Americans treating gun ownership pretty casually, and not expecting Canadian laws to be much different. They are.

This is the best posting I've seen in this thread. I've done exactly the same thing and in every case I've ended up with a better deal than you get in those stacked together tract homes . . . even if they do cost 100 grand plus!

Right now I live on 4 acres in an excellent school district in a subdivision that has reasonable restrictions. And I spent no more than I would have if we had bought a house in a highly restricted (read "no antennas") subdivision on a tiny lot with the home next door only 20 feet away.

Stick to your guns! It WILL take longer to find a house. You won't be sorry you took the time! And the message may start getting out.

Of what use is this metric? How many Morse code stations in the U.S. are
using the simplest possible transmitter? If one is going to argue the
complexity issue, you have to be willing to accept examples of the extreme.
Just as few of the VHF FM stations in the US are not as simple as they
might be, few of the Morse code stations are as simple as they could
might be. It is really true that a CW oscillator can be frequency modulated
with a carbon microphone, even if few people do it today.

>How many hams use your "simpler than CW" circuitry today?
>We were not talking about 40 years ago. Anyway, FWIW, the addition of
>the mike would make it more complex, rather than simpler.

The addition of the carbon and related components appears to add
very little complexity to the circuit, with the advantage of making
the transmitter much simpler to operate. A Morse code transmitter
requires an operator trained in the ability to send Morse code
by hand, whereas a phone transmitter requires an operator capable
of speaking. Most folks already know to speak, and that sounds
like a simpler system to me.

3081. help on the FCC&MAYDAY calls

Newsgroup: rec.radio.amateur.misc
Date: 1995-08-18 00:00:00 UTC
From: qa01918@inet.d48.lilly.com
Message-ID: <1995Aug18.202901.5928@inet.d48.lilly.com>
Source record: 240219

Does anybody know where to look for information on the legality of using the word MAYDAY ? I posted something earlier about using it over hand held FM radios ay racecar events. Right now we use it to start out a call on a life threatening incident. Our call will go something like this: "MAYDAY, MAYDAY, turn 3. We have a car upside down and on fire,etc,etc." Some people think that it is illegal to use the word mayday.
My earlier posting got a little sidetracked onto boating and etc. Could somebody come up with the correct FCC position on the subject? We've looked in FCC books and only found out that it is not apprpriate to use it on Citizens Band. Would FM be considered different fom CB in the eyes of the FCC?

Talked to my friends at T-Zone today about the FT-1011MP. This is the JA-only number for the 1000/D. They claim there is a 200-watt MOSFET final option available, so the 1000-MP should be upgradable/changeable too.. Perhaps the copy in QST is mis printed????

3084. Henry 2m amp INFO?

Newsgroup: rec.radio.amateur.misc
Date: 1995-08-18 00:00:00 UTC
From: hc755@cleveland.Freenet.Edu
Message-ID: <411ka3$bqs@usenet.INS.CWRU.Edu>
Source record: 240253

I have a Henry 2meter amplifer that I'd like to find out
more about. It says on the tag:

HENRY ELECTRONICS RF AMPLIFIER
Model Number S-30
Serial Number: 46-727
Tuned Frequency: 146.0 MHz
Maximum Output 30 Watts
Nominal Drive 1 to 5 Watts

It measures 4 1/2 by 4 1/4 by 3 inches tall. It has a big
heatsink on top. It also has a 1/4 inch phone plug socket
for controlling the amp when the internal relay is not used.

Is this a Class C only amp or can it be used with
AM/SSB also?

Thanks and 73--
Ken

3090. Transoceanic 7G605

Newsgroup: rec.radio.amateur.misc
Date: 1995-08-18 00:00:00 UTC
From: billhar@spaceworks.com
Message-ID: <4115gq$nsf@mars.SpaceWorks.com>
Source record: 240259

Well, I decided the other day it was time to get out the
Zenith 7G605 Transoceanic and see if it can be restored in
time for the contest at the VRPS convention in October. We are
having a category this year just for tube-type T/O's. Lots of
work to be done to get this baby in shape. The cabinet is in fair
condition. The genuine simulated alligator covering is pretty faded
on top, some gouges on the sides, the escutcheons and the
whip antenna need to be replated. I removed the chassis and it
is in good shape with no rust, just dirty.
Uh-oh, there is a sheet of asbestos under the chassis, so I
get out the clear lacquer spray and give it several coats to seal
it and then cut a piece of cardboard the same size and glue it
down over the asbestos and then another coat of lacquer. That
should seal it so no asbestos dust goes floating around.
Underneith the chassis is pretty clean. All the orginal
Zenith caps are there and I don't see any evidence of anyone
being here before messing around. Some of the rubber covered
wiring is very brittle is obviously going to have to be replace.
After a few checks with the ohm meter I decided I would
risk bringing it up on the variac. After the 35Z6 warmed up I
got a nice loud hummmmmmmmm. Bad filters. A quick check
with the frequency meter confirmed that the 1LE3 oscillator
was working, at least on the broadcast band and two of the
short wave bands so can't be too bad off. No sense going any
further until the filters are replaced. The original filter caps are
mounted in two cans on top of the chassis.
I want to keep the chassis as original as possible so I will
remove the insides of the cans and put new caps inside.
Besides the underside of the chassis is too crowded to easily
place any there. This thing must have been built in layers.
There are components wired next to the chassis that you
cannot get to without removing overlaying components. The
old filters came out easily after heating the can with a propane
torch. New electrolytics were installed inside the cans and held
in place with hot glue. A piece of business card was cut to go
just inside the can with a hole in the center for the leads and
then covered with more hot glue.
After installing the new filter caps, brought the set back up
on the variac and checked B+. Looks good. Punched the AM
band switch and by golly there is a station down in New
Orleans.... not bad! Only there is hum again. It only appears
when a station is tuned in. Modulation hum. Could be the
bypass cap from B- to chassis ground. Removed one end of
the cap and tacked a new one in place and hum reduced some

but still objectionable.
Another uh-oh, now the set is doing funny things, static,
cutting out. Found out it happens when I jiggled the tone
switch escutcheon . The switches are connected via a cable
bundle of seven wires, four of which are in a shielded jacket.
The old rubber insulation on the wires is very brittle and is
falling off and the wires are shorting out. It is so bad that the
only thing to do is replace all the wires with some cloth
covered stuff. Not going to be real easy. Getting late and I'm
tired so save that for tomorrow.

It's hard to say. I grew up near the Canadian border, in Michigan, and we thought no more of going into Canada in the '50s and later than going to visit relatives in the next state.

Every experience we've had recently, either entering Canada or returning to the US, has been less than smooth. Driving up to Vancouver in the late '80s, for some reason, the Canadian customs official was convinced that I had a handgun concealed in the truck. Don't know if it was casual dress, driving a truck, or California plates that piqued his curiosity. It wasn't until after he'd explained Canadian handgun law and forfeiture policy, and my invitation to search the truck if he liked, that we were allowed to pass.

On that same trip, I got hassled by a US customs official for bringing back a case of beer, which I had declared. Apparently the seller wasn't quite correct on his interpretation of export laws. I think what really bothered him was that it was late in the afternoon, and he didn't want to be troubled with calculating the duty.

On another occasion, we had been visiting my father-in-law in Michigan, and he had given us some antique chairs that belonged to his grandmother. We entered Canada from Michigan's upper peninsula, and re-entered the US in the northern part of Idaho. Naturally, the US customs officer inferred that the chairs were antiques that we bought in Canada; he did accept our explanation, in lieu of other proof.

I guess all of this rambling means - it depends. I don't blame the customs officials on either side of the border, because everyone is under closer scrutiny because of drug traffic. I will say that we carry our passports whenever we enter Canada now, even though it is not required, and even being born-in-the-USA anglo types.

3100. DF5JT/HK0 and some questions about it

Newsgroup: rec.radio.amateur.misc
Date: 1995-08-18 00:00:00 UTC
From: Peter Lemken <plemken@mail.hb.provi.de>
Message-ID: <4122m2$2i1@popcorn.hamburg.pop.de>
Source record: 240269

I was active from San Andres between July 18 and August 9, working 100 Watts from a TS930 and an FD4 Windom antenna. Working CW only I managed to log about 2000 QSOs. During the operation i meticulously followed the procedure of giving my callsign after _each_ QSO and giving QTH, IOTA-number and QSL-info via DF3CB after 10 QSOs or 5 minutes, whichever came first. Here are my questions:

- How come some stupid operators still ask for my callsign, QTH and QSL-info? Can't they listen? Americans were particularly good at it.

- Many hams tried to work me more than once on one band, especially Americans. Why don't they understand that duping gets on the operator's nerves, causes unnecessary QRM and denies other hams a chance to work a dx-station.? At one point I had 8 consecutive QSO with callsigns that were in the log already.

- I tried to copy as many weak stations as possible and also tried to stick to a call, once I heard portions of it. So, why do some idiots AA7** or VE3*** still call in, when I specifically asked for W2AR?

- When I called a station with its callsign correctly, in 80% of the cases it came back with: "de KA5XYZ KA5XYZ 599 de KA5XYZ bk" Why? I had the call correctly and repeating it three times doesn't make any sense once you are in the log correctly.

All of the above questions refer to US-operators mainly. Despite their reputation, EA and I operators were more disciplined than the US-guys. Why? The contrasts even got worse when I ran the first pile ups to JApan. Their operating standards are incredibly disciplined and a high QSO-rate of more than 200 an hour was no problem with them.

I can only think of one reason for the bad US-operators for being as bad as they are: They do not know how to listen anymore. It is depressing to know that Americans are unable to spend _5_ minutes listening to a dx-station and then simply work it. Instead they call and ask stupid questions.

News from BARTG (the British Amateur Radio Teledata Group)

GB2ATG NEWS BULLETINS
This is being put into the Internet/newsgroups in, as of September, a
sligfhtly different manner.
We hope that there will be minimal interruption for the recipients
of GB2ATG News Bulletins.

DATACOM
BARTG is pleased to announce that the SUMMER issue of its quarterly magazine,
DATACOM,
has now been published. The delay in getting this issue into print was
regretted and was a combination of late-running articles and a heavy
workload at the editor's (paid) job.

73, Ian G4EAN @ GB7BAD or ibx @ cs.nott.ac.uk
(Secretary of BARTG - British Amateur Radio Teledata Group)

Paul,I never claimed that this poll was scientific, and keeping the results hidden will not make the poll suddenly scientific. No poll can be considered scientific,in which the participants are self-selected. Many magazines, newspapers, and TV news programs ask people to participate in self-selecting "therefore nonscientific" write-in and call-in polls. CNN, Redbook,Comsumer Reports,and heck even QST,have asked people to participate in such nonscientific surveys.

Come to think of it Paul,the FCC itself has a comment period before they make a rules change. This happened just recently with W5YI's proposal to ban HF one-way broadcasts. One reason the FCC does this,is to get some feel of how their policy change will be received before it's implemented.Infact,the ARRL just recently asked its membership to flood the FCC with comments opposing W5YI"s petition. Would those comments "scientifically" reflect the overall view of the ham community??? Yet the FCC will take those comments into accounts when setting policy on this issue.

Tell me Paul,has the ARRL, CQ mag.,73 mag., or any ham club for that matter, ever committed the money necessary to conducted a "scientific poll" of the ham community on a ham related issue? Paul,The lesson here is, that important decisions are made all the time by policy makers, without the help of a scientific poll. Often, all they have to go on, are their own gut level feelings to support their decisions.

Each person can decide for him/her self how much value they want place on the results of the Ham Poll. Rest assured Paul,the ham community will have no "scientific polls" to consider in determining where hams stands on a given issue. As usual, the only data available will be the comments one picks up at hamfests and club meetings. Just as valuable,in my opinion, and an additional piece of data to consider, would be the results of the Ham Poll. After all, if its good enough for the ARRL and the FCC to gather information in that manner, it's good enough for me! At least in our poll you'll find out how age, and license class, affected the poll results.

Sounds like a form letter or rubber stamp as far as "stock has been depleted."

As far as I know the FCC Form 610v has never been available...no one has ever had them because they have not been produced/published yet. [Not necessarily in that order] We'll all just have to be patient and wait until they do come out.

From: David Hough <dave@llondel.demon.co.uk>
Subject: GB2RS News 20th August 1995

Good morning. It's Sunday the 20th of August and here is the GB2RS news broadcast, prepared by the RSGB and intended for all radio amateurs and short-wave listeners.

We start this week with the news that tropospheric conditions have once again affected all the VHF and UHF bands, due to the anticyclone centred over the UK. Colin, GM0CLN, took advantage of this to work 7S6AG, a special event station at the World Athletics Championships held in Sweden. And G4NVD, a GB2RS newsreader in Grimsby, reports being called back with reception reports from Denmark, the Netherlands, Belgium and all over the UK after reading the news on the 6th of August. On the 9th of August he also made contact with SM7URN at a distance of 980 kilometres while using less than half a watt of SSB on 2 metres.

The RSGB National Convention at the Stafford Amateur Radio and Computer Show is taking place this weekend, the 19th and 20th of August, at the County Showground, Stafford. In addition to a large trade show, the event features on-demand Morse tests, demonstrations, special interest groups and a bring and buy sale. There is a large RSGB book and information stand, including an exhibition of photographs of historic radios and events, with the emphasis on Marconi. RSGB committees are also in attendance. An official show guide is published in the August Radio Communication.

The Radio Amateur Invalid and Blind Club, Northern Ireland area, wishes to acknowledge and thank the members of the Mid-Ulster Amateur Radio

Club for their co-operation and time in arranging a street collection recently on behalf of RAIBC Northern Ireland. The proceeds will be used to purchase radio equipment in the province.

The IEE will be staging an International Conference on 100 Years of Radio at Savoy Place in London between the 5th and 7th of September, at which a number of radio amateurs will be making significant contributions. One of the sessions, entitled "Tuning and the Amateur", is chaired by RadCom 'Technical Topics' columnist Pat Hawker, G3VA. It will include a paper called "Amateur Radio - Past, Present and Future" by G3ZCZ, which will be presented by Richard Limebear, G3RWL. Other contributors include Professor Martin Sweeting, G3YJO, from the University of Surrey UoSAT programme; and Cecil Ramsbottom, G3BZQ, who will present a paper called "The Era of the Home Wireless Constructor". For further details contact IEE's Conference Services on 0171 344 5477 as soon as possible.

The RSGB International HF Convention will take place at Old Windsor in Berkshire on the 9th and 10th of September. The event will feature lectures and presentations from some of the world's top HF operators and DXers, including Martin Atherton, G3ZAY, who will give a talk on "Sunspots and Propagation". The talk will describe how sunspots affect HF propagation, why they run in 11-year cycles, how to measure them and how to tell when a new sunspot cycle has started. Martin will also explain the mysteries of the 'A' and 'K' indices. There will be a 48-hour contest station operating in the WAE phone contest and, for the first time, DXCC QSL card checking will be available at the convention. Further details of the RSGB HF Convention and a synopsis of the lectures are published on pages 20 and 93 of the August RadCom. Details of the lecture programme and a booking form can also be obtained from Marcia Brimson at RSGB Headquarters on 01707 659015.

Now some items of HF DX news from the weekly RSGB DX News Sheet, which is edited by Chris Page, G4BUE:

Subject: Help needed to get started...

The best way to get info you need is to contact Greece Radio Amateur Club in Athens or any other major city.
Greece has been one of leaders in satelite communications on Ham Bands and SV1AB George (profesor of Athens University) was formost operator on VHF/UHF.
When you walk or drive around, observ rooftops and if you see strange antenna on the roof or tower - ring the bell.....

Yes, just make sure you have a copy of your license. It might also aid
you in having a copy of your receipts for your radio equipment with you
in case there is any questions with customs officials when you return.

msl7k@virginia.edu (Melissa Lang) wrote:
> I would like to know where I can hear newsline radio on the hambands. Also,
> where can I get it on the internet.

A few nets carry Newsline on HF. There are also quite a few repeaters that
carry it over the weekend. If you contact the producer, Bill Pasternak at
BillWA6ITF@aol.com and tell him the area of the state you are in, he may be
able to provide the call and/or frequency of one in your area. Any
repeater can QST newsline, but only those who financially contribute to
Newsline will be on his list.

If you have a TVRO dish, Newsline is also presented in it's entirety as
part of "This Week In Amateur Radio" over the Tech-Talk radio network on
T301. The producers of that show post up their program contents weekly on
this newsgroup. You can get the time, xponder and subcarrier info from
their post.

In addition to the weekly posting of the hardcopy here on the newsgroup,
there are 3 mailing lists that distribute it via e-mail. One is by the
transcriber, Dale WD0AKO, for redistribution purposes, another is automated
and is available via a server at netcom, (24 hours after Dale publishes
it), and the last one I distribute to individuals, (anywhere between 1-12
hours after Dale sends it to me). E-mail me for further information about
text file mailing.

1050 hz.

Now I need to built a device to open the squelch, since it's not a
DTMF.... (It figures, they couldn't have just made it a DTMF tone :)

That's just in the realm of redundant. If a Ham can make a call on the
club machine, that same person can make a call on his/her own machine.
They're both one-way, if you look at it - only the Ham and the repeater
identify.

From: shreed@MCS.COM (Scott H. Reed)
Subject: The Word Mayday

Richard McAllister, rfm@urth.eng.sun.com writes:

> Fascinating. Does anybody know where "Pan-Pan" comes from? I know
> "mayday" is from "m'aidez", French for "Help me!", and I see
> ["Securite"] is just French for "Safety". But "Pan-Pan" is baffling.
> It's certainly an attention-getting sound.

The French PAN PAN in the urgency signal means TO ALL TO ALL.

If it were French 'pain, pain', pronounced almost the same, it would
mean English 'bread, bread', probably most unhelpful. :-)

Equivalent expressions, telegraphy/voice are

type: telegraphy: voice:

distress <SOS> <SOS> <SOS> MAYDAY MAYDAY MAYDAY
urgency XXX XXX XXX PAN PAN PAN PAN PAN PAN
safety TTT TTT TTT SECURITE SECURITE SECURITE

<SOS>, dashes extended, not faster than 16 wpm. Parts 80.314-80.333
are exquisitely specific about what goes into a distress, ugency or
safety call, voice or (well, used to be) manual telegraphy, as well
as any replies or relays.

USCG sez they ain't listening anymore on 500 kHz, but if my boat were
sinking, I'd blast out on 'every means available', old CW freqs
included, and hope somebody hears me. Bet USCG still are listening,
just not officially. Or else, some ham who knows what he's hearing
and QSPs USCG RCC.

Voice procedures are still very much in use, all bands.

The experience of ops Jack Phillips and Harold Bride of blessed
memory aboard RMS Titanic, 14/15 Apr 1912, is the reason. Present
day would-be deregulators of radio spectrum should remember the chaos
prior to the FRC and later FCC, IMHO, responsible in great part for
the disaster.

GMDSS imposes some new rules. See now Part 80 Subpart W.

I think every competent ham operator should know Part 80 in addition
to Part 97.

And from Italy, the special station IY1MR is active now, until the 10th of September, during a Marconi 100th anniversary exhibition organised by the ARI Rapallo Section and the Marconi Foundation. The station is active on VHF and UHF as well as all HF bands.

Now news of some special event stations:

The North Norfolk Amateur Radio Group is operating GB100NT from Sheringham Park this weekend, the 19th and 20th of August, in order to celebrate the 100th anniversary of the National Trust. Next weekend, the 26th and 27th of August, the Swansea and Port Talbot clubs will operate GB100NT from Aberdulais Falls.

GR0VLB will be on the air on Fridays, Saturdays and Sundays throughout August, representing the Voluntary Life Brigade in Sunderland.

The Braintree and District Amateur Radio Society is operating GB2OAY from Andrews Field Aerodrome from Friday the 18th until Sunday the 20th of August. The club is celebrating its 20th anniversary, and details of a 20th Anniversary Award can be found in the May edition of RadCom.

The Bangor and District Amateur Radio Society in Northern Ireland is operating GR4GPF from Grey Point Fort between 10.00 am and 4.00pm this weekend, the 19th and 20th of August.

The Leicester Radio Society is operating GB5VJ during its open days this weekend, the 19th and 20th.

The Aberystwyth and District Amateur Radio Society is operating GR0ARA today, Sunday the 20th, from the Aberystwyth Model Club's annual event at Blaendolau Fields, Aberystwyth.

GB2SGS will be on the air from "MOOT 95", a camp for over one thousand Scouts and Guides at the Suffolk Show Ground, near Ipswich, from Friday the 25th until Monday the 28th of August. The station will be mainly on 80 and 40 metres SSB and CW, and on 2 metres and 70cm SSB and FM.

The Barry Amateur Radio Society will be operating GB5FI from Flat Holm Island in the Bristol Channel, along with members of the Passau Radio Club from Bavaria, from Friday the 25th of August, for five days. The station will be active on HF and VHF, and modes will include Amtor and Pactor.

Next weekend, the 26th and 27th of August, is the Northern Lighthouse Weekend, when eleven Scottish special event stations will be active from lighthouses. The stations will be located in the Shetlands, Orkneys, Outer Hebrides and mainland Scotland, and will use the callsign GB2L followed by one or two letters indicating the name of the lighthouse. Activity will be between 0800 UTC on Saturday and 1700 UTC on Sunday, on 10 to 40 metres, SSB only. A list of the stations participating can be found on page 33 of the August RadCom and further information can be obtained from Mike, GM4SUC, on 01292 443127. And a special event

station in Queensland, Australia with the unusual callsign "VI50 Peace", that's "V I Five Zero P-E-A-C-E", is active throughout August, September and October.

Next the Rally News:

The Great Eastern Rally takes place at The Cattle Market, Hardwick Narrows, near King's Lynn in Norfolk today, Sunday the 20th of August. The event features a car boot sale, and a spacious indoor area with national exhibitors and a bring and buy stall. Talk-in will be on 2 metres channel S22.

Also today, the 20th, the West Manchester Radio Club is holding the Red Rose Rally at Silverwell Street, Bolton. Doors open at 11.00 am, or 10.30am for disabled visitors, and talk-in is on 2 metres channel S22.

The Amateur Radio Caravan and Camping Club rally takes place at Stratford upon Avon between the 25th and 28th of August. For further details telephone 01462 811208.

A computer and radio rally will take place on Saturday the 26th of August at Manchester University Refectory Hall, Oxford Road, Manchester. For further details call 0161 627 2502.

The Galashiels and District Amateur Radio Society will hold an open day and radio rally at the Focus Centre, Livingstone Place, Galashiels next Sunday, the 27th of August. The event features traders, club stalls, a bring and buy stand, raffles and refreshments. For further information contact John Campbell, GM0AMB, on 01835 822686.

The Coleraine and District Amateur Radio Society's annual rally will take place at the Lodge Hotel, Coleraine, next Sunday, the 27th. The event features a large number of traders, and doors open at midday. For further details, contact GI8LTB on 01265 58664.

And the Torbay Amateur Radio Society rally will also take place on Sunday the 27th, at Clenon Valley Leisure Centre, Paignton, in Devon. The event features traders, special interest stands, a bring and buy stand, and a restaurant and bar. Details from John, G3YCH, on 01803 842178.

The Huntingdonshire Amateur Radio Society Bank Holiday Monday Rally will take place on the 28th of August at St Peter's Road, Huntingdon. The event features two halls and a car boot sale. For further details contact David, G7DIU, on 01480 431333.

And the annual Wight Wireless Rally will take place on Saturday the 2nd of September at the National Wireless Museum, Arreton Manor, Newport, Isle of Wight. The event features traders, a bring and buy stand, and free admission to the National Wireless Museum. The doors will open at 11.00 am and talk-in will be on 2 metres, channel S22. Further details are available from Douglas Byrne, G3KPO, on 01983 567665.

There is a proposal for a new 70 centimetre speech repeater. The proposal is for GB3TC to operate on channel RB1 from Wincanton, Somerset.

Now for the HF contest news:

There are no RSGB HF Contests either this weekend or next weekend, but the Japanese KCJ CW contest is taking place this weekend, the 19th and 20th of August. Brief rules are on page 22 of the August Radcom.

And the South-East Asian "SEANET" SSB contest is also taking place this weekend. Brief rules are on page 20 of the July RadCom.

Next some VHF contest news:

The RSGB 432 MHz Fixed Station and 432 MHz Listeners contests takes place today, the 20th of August, between 1700 and 2100 UTC. The rules are in the May edition of RadCom.

And now the solar factual data:

The period from the 7th to the 13th of August saw solar activity at very low levels, and geomagnetic levels quiet to unsettled. The mean Sunspot number for the period was 17, but on the 9th the solar disc was spotless. Solar flux levels declined slightly from 74 units on the 7th, to 71 units by the 13th, with an average of 73 units. No solar flares were reported. The electron fluence increased from moderate levels to high levels on the 9th, whilst the X-Ray flux remained steady and averaged A2.6 units. The 90-day solar flux average on the 13th was 75 units.

Geomagnetic conditions increased from quiet levels on the 7th to active levels, with an Ap index of 19 units, on the 9th. This was due to a recurring coronal hole. Levels then declined to quiet conditions for the rest of the period, with an average of Ap 13 units. The aa indices, as supplied by the British Geological Survey for the period from the 1st to the 7th of August, saw conditions at very quiet levels, with only 6.1 nanoTeslas on the 6th. The most disturbed day was the 7th, with 13.0 nanoTeslas. The average for the period was 10.2 nanoTeslas, just K2.

I'll repeat the figures: spots - 17, flux - 73, Ap index - 13, X-Ray flux - A2.6

Now the ionospheric data for Central France.

The F2 daytime critical frequencies at Poitiers, as reported by Meudon for the period from the 4th to the 10th of August, averaged 6.7MHz. Levels increased from 6.3MHz on the 4th, to 7.8MHz on the 7th, before declining to 6.1MHz by the 10th. The darkness hour lows remained steady and averaged 3MHz. The daytime highs took place between 1900 and 2000 hours, with the darkness hour lows between 0300 and 0400 hours every day.

Very little sporadic E was reported as we approach the end of the summer 1995 season. Also, seasonal effects will begin to take place with the

daytime highs taking place earlier in the evening as the days shorten in the northern hemisphere.

I'll repeat the figures: highs - 6.7MHz, lows - 3MHz.

And lastly the solar forecast.

This week the quieter side of the sun is expected to be looking our way. Solar activity should be very low, and solar flux figures around the low 70s. Geomagnetic activity is expected to be very quiet, but could be up to active levels today or tomorrow. Ionospheric MUFs during daylight hours are expected to be about 18MHz for the south and 16MHz for the north. The darkness hour lows are expected to be about 11MHz. Only small sporadic E openings, particularly on 28 and 50MHz, are expected in the coming week.

And that's the end of the solar information.

Finally in the main news, SSL has informed the Society that as of last Wednesday morning, the latest callsigns allocated were in the G0 Whisky Juliet and G7 Victor Oscar series, and Novice calls in the 2 0 Alfa Mike and 2 1 Echo India series.

This system was deployed before single-chip DTMF decoders were readily
available. Most designs use the LM567 tone-detector chip, which is
generally a good choice, but can sometimes act rather squirrley. Keeping
the audio input level to the chip low seems to help. The application notes
for the 567 suggest a method to latch the output on, using feedback from
pin 8 to pin 1. This would be ideal for a weather alert radio, as the
audio should remain on after the tone is received.

>
>A more technical and/or complete answer will be GREATLY apreciated! Also, any
>suggestions for more power would help!

Probably what he meant is that it won't work because it isn't Type
Accepted for that service. He probably didn't want to get into an
argument about Type Acceptance. It's not so much that the amplifier
wouldn't *technically* function, as that it is illegal to use for
that service. However, most of these brick amps use a low pass
network in the output, so it might not work technically either.

If you want more range, either go with a more powerful radio that
is Type Accepted, IE a 25 watt mobile, or improve your antenna.

>auxiliary station has to be transmitting to you on 222 or above.

This is an incorrect read of the rules. The control operator does not have to be "present" at the station. The control operator has to be at a control point.

(Note: A station under automatic control does not require an operator at the control point - but of course we can't have auto control over 3rd party traffic)

>Some
>people read the aux station rule to be the opposite direction (HT is the
>aux station).

This is the correct read of the rules. An auxilary station is the control point of an associated station under radio linked, remote control.

(Note: ANY amateur station may be remote controlled)

You can issue a Mayday on any frequency without a FCC license!
So, only use this in emergencies where you have a life threatening
situation. And need immediate assitance.
You can also devolop your own code words or numbers.

Such as:
Tango = Need new tires
Foxtrot = Refuel
Mike = Miller Time
Union = Bathroom brake
UHHHHHHHHGGGGGGGHHHH!= I just hit the wall and the car is on fire.

:-)

To all radio amateurs

SB PROP ARL ARLP035
ARLP035 Propagation de KT7H

Solar activity continues to drift into the low part of the cycle. Flux was below the average for the previous 90 days on every day over the past week. Flux is expected to gradually drift up to a plateau around 75 between August 28 and September 3, then drop back around 70 after the first week in September. Expect a moderately active geomagnetic field around September 5, 6, and 10 due to recurrent coronal holes.

The latest prediction for the rest of this solar cycle shows a slight rise in solar flux this fall before the bottom of the cycle around June through December, 1996. Flux should be back up around current levels around April, 1997. The peak in solar flux for the next cycle is projected for August, 2000.

For sunspot numbers the expected minimum is around April to June, 1996.

Sunspot Numbers for August 10 through August 16 were 24, 22, 12, 11, 0, 38 and 41, with a mean of 21.1. 10.7 cm flux was 73, 72.9, 71.9, 70.8, 70.1, 71.4 and 70.5, with a mean of 71.5.

To all radio amateurs

SB QST ARL ARLB081
ARLB081 ARRL reply to rules plan

The ARRL has filed reply comments on FCC proposals of several rules changes, in WT Docket 95-57.

The League reiterated its original comments (detailed on page 59 of September 1995 QST) and responded to several comments and suggestions by others.

On the matter of a lifetime amateur operator license (an original ARRL proposal) versus granting to an expired licensee credit for licenses previously held (the FCC's proposal), the League said that while comments were mixed, those comments on the FCC's proposal failed to consider a lifetime alternative as a superior alternative.

The League cited its strong opposition to the idea of a volunteer examination ''session manager,'' saying that the shared responsibility of three volunteer examiners is crucial for continuing the integrity of the VE program.

The League in its reply comments said that most others who commented supported its proposal to increase from two to four the number of licensed members required to constitute an Amateur Radio ''club'' for the purpose of obtaining a club station license.

Finally, the ARRL noted that almost no comments had been received, pro or con, on proposals to expand the ways to ''sign portable'' and to offer temporary 1X1 call signs to special event stations.

ARLB082 FCC proposes closings

ZCZC AG49
QST de W1AW
ARRL Bulletin 82 ARLB082
From ARRL Headquarters
Newington CT August 18, 1995
To all radio amateurs

SB QST ARL ARLB082
ARLB082 FCC proposes closings

Federal Communications Commission Chairman Reed Hundt has proposed actions to save money, including personnel reductions and facility closings.

Hundt said that although the FCC currently has fewer than its authorized personnel ceiling of 2,271, steps would be taken to reduce the number of FCC employees to about 2,050. In addition to retirements and buyouts, the closing of some regional and field offices would result in about 120 jobs lost, of which some 50 would be involuntary. Hundt said these 50 ''reductions in force,'' or RIFs, would be the first in FCC history.

Regional offices would be closed in Atlanta, Boston, and Seattle, leaving their functions to regional offices in Chicago, Kansas City, and San Francisco.

The following field offices would be closed (leaving 16 still open): Buffalo, Miami, St Paul, Norfolk (Virginia), Portland (Oregon), Houston, San Juan, Anchorage and Honolulu.

All nine monitoring stations would be closed, as well as monitoring operations within four FCC field offices. ''Fortunately,'' Hundt said, ''technological advances will permit us to replace these monitoring stations with a national automated monitoring network by the summer of 1996.''

These nine monitoring stations are at Vero Beach, Florida; Belfast, Maine; Allegan, Michigan; Douglas, Arizona; Livermore, California; Ferndale, Washington; Grand Island, Nebraska; Kingsville, Texas; and Powder Springs, Georgia.

Hundt said ''No monitoring function will be impaired.'' One facility, in Laurel/Columbia, Maryland, would be the central site for

''electronic monitoring.''

If approved by the full Commission, the monitoring stations and field offices would close by July 1996. No timetable was given for closing of the four regional offices.

>>Curtis responded:
>>>
>>> Yes. If you are controlling that (patch) station by radio link it has to
>>> be done from an auxilary station (at or above 1.25cm).
>>>

I guess I wasn't clear of my "yes" respnse to the question of remote control. A 2M simplex patch is legal. Gary is correct - third party traffic (including phone patches) is allowed on all ham bands. But if control operator duties are being performed by a radio linked remote, that control must be above 1.25cm.

[then Mike wrote]
[snip]
>>
>>According to my read of the rules, the auxiliary station is the *patch*
>>station, because the primary station is the one that has the control
>>operator present (that is, you on that HT). So in that instance, the
>>auxiliary station has to be transmitting to you on 222 or above. Some
>>people read the aux station rule to be the opposite direction (HT is the
>>aux station). Either case, of course, immediately makes a 2m personal
>>patch illegal.

To clarify the question of which station is the auxilary station: The auxilary station is where the control point is located for remote control operation.
So the station with the patch that is being controlled by remote is a remote controlled station. The station doing the controlling is the auxilary station.

All stations are primary now (or club). An auxilary station is operated under a primary or club station license.

[then Gary wrote - but I don't know if he thinks he is correcting me or Mike]
>NO! Patches are legal even at HF. So the fact that the station has a
>patch isn't the primary issue. The station with the simpatch on it
>is operating under the *Remote Control Rules*. You can operate *any*
>station under remote control on *any* band. The *control link* must
>be done under auxillary operation, and above 222 MHz, if by radio
>(the control link can also be wireline of course). Automatic control

>is *never* permitted for a station operating under remote control,

>the patch. Since that's easier, its the right way to do it. But
>if you don't mind the extra radios, you can operate the simpatch
>station on 2m, or any other band, including 20m or 75m if you're
>crazy enough to do that.

What's crazy about a phone patch via HF? Other than it just isn't done
very often.

>The rules permit you to do anything with a remotely controlled station
>that you can do with a station under local control, including running
>phone patches. There's nothing grey about this at all.

This is why I was concerned when Mike (an O.O.) said he would "write up"
any simplex patch he found on 2 meters.

Is this confusing enough for everyone?

Simple. In an emergancy situation, it makes things much easier. If police
are closing an area off, they are most likely let someone carrying a
radio and a badge cliped to their jacket get by no prob. Otherwise, you
need to pull out the old license and that wastes valuable time.

: Cop/Mr. Important wannabees, I guess.
Someone is jelius.

Scott H. Reed, shreed@MCS.COM writes [etc]:
> Richard McAllister, rfm@urth.eng.sun.com writes [etc]:

Well, so forth, and so fuch abt distress calls, but the latest issue of "Ocean Navigator" magazine has this about false distress calls in the Ninth CG District -- that is the Great Lakes --

"HOAX DISTRESS CALLS estimated to have cost the Coast Guard's [9th] district in the Great Lakes more than $150 000 for each of the last three years.

"[USCG 9th Dist] received 91 hoax calls in 1994 requiring 113 responses which ties up resources for 218 sorties by various boats and aircraft. Other Coast Guard districts report similar wastage of money and risk to personnel caused by hoax distress calls."

My opinion:

1) hoax distress calls should be prosecuted under FCC and USCG regulations as severely as possible; any amateur or commercial radio operator license-holder issuing a false distress should be stripped of license and never be allowed to hold again; non-holders should never be allowed any license, amateur or commercial.

2) vessel owners MUST carry the proper equipment; GMDSS should be made mandatory not only for commercial, but also private vessels.

There is no good reason to put USCG, USN and USAF personnel (not to mention the civilian auxiliaries) at risk searching for you over 500 000 square nautical miles if you can't carry a $400 EPIRB on your $500 000 yacht. Nor should the rest us have to foot the bill by our taxes.

This actually happened in Nov 1993. Two brothers went to sea in separate boats and got lost in a storm. They found one right away. Well, okay. Although why you would attempt this in the North Atlantic in November escapes. The other was found weeks later north off Bermuda after CG had given up search. He was several hundreds of miles away from where they were looking. He still didn't know anybody was looking for him, 'cause he didn't have any radio.

Luckily, I can't remember the names of these guys, altho' I think it was Russian.

Neither one carried a $400 EPIRB, altho' each had spent abt $100 000 to put his boat to sea in the November North Atlantic. This was all reported in the New York Times.

If somebody can corroborate the story, appreciated.

Almost exactly the number who use your keyed CW oscillator.
FYI the CW circuitry in my IC-745 is pretty complex. The CW
filters alone cost around $300 and my Bencher hand key cost
$80. It came equipped for SSB and FM. I had to spend an additional
$380 to get on CW.

>Anyway, FWIW, the addition of
>the mike would make it more complex, rather than simpler.

Actually, a carbon mike is a much simpler device than the average
commercial Morse key. You can make one out of pencil lead.

If I remember right, the 5 kHz deviation of NBFM was chosen to equal
the bandwidth of an AM signal? Looks like you are thinking telephone
line bandwidth. Broadcast AM is wider than 6 kHz.

RDF EQUIPMENT FOR EUROPEAN/ASIAN STYLE FOXHUNTING
Part 3 -- Commercial and Homebrew RDF Sets

Competitors in HamCon/Foxhunt-95 may use as much RDF gear of any type as they can carry by themselves, so long as the gear does not radiate any signals that would interfere with other hunters. Besides the simple setups described in Part 2, here are some specialized RDF devices to consider for your arsenal:

In an international championship foxhunt, the first transmitter will be at least 3/4 of a kilometer from the starting point, running as little as 250 milliwatts. Tuned or untuned field strength meters (such as the Sniff-Amp) and commercial "bug detectors" will not have sufficient sensitivity to hunt at this distance. However, these units are excellent when you are a few yards away from a well-concealed transmitter and you can't get enough attenuation with your sensitive equipment.

AM-based Dual-Antenna Sets

The Little L-Per dual-pattern RDF set by L-Tronics[1] is popular with search and rescue teams that hunt Emergency Locator Transmitters in the wilderness. It consists of a dual-dipole antenna set, switcher, and receiver with attenuator and zero-center meter. It has two modes for RDF. The switched mode gives a very sharp left-right indication on the meter, making it easy for the user to walk the bearing line toward the transmitter. In the non-switched mode, the antenna performs like a two-element phased array and the meter reads signal strength; this is better for very weak signals.

The sharpness of the zero crossing indication in the switched mode makes possible more precise bearings than those obtainable with a quad or yagi. Under ideal conditions with a well-built unit, bearing accuracy is within one degree. Meter deflection tells the user which way to turn to zero the meter. For example, a negative (left) reading requires turning the antenna left. This solves the 180 degree ambiguity caused by the two zero crossings in each complete rotation of the antenna system.

The L-Per receiver has 4 crystal-controlled channels, which limits its versatility on ham bands. Plans for the Happy Flyer DF, a very similar dual-pattern design, are in the T-hunt book.[2] This homebrew unit can be added to most VHF receiver models with a little minor surgery. Both units have RF gain controls that can be used to gauge relative distance to the fox.

FM-based Dual-Antenna Sets

Dual-antenna add-on sets such as the SuperDF kit,[3] Ramsey Foxhound,[4] Simple Seeker[5] and W9DUU design[6] give sharp left-right indications similar to the L-Per, but they can be used on two meters with ordinary narrowband FM hand-helds and scanners. The RDF set plugs into the antenna and earphone connectors of the receiver; no modification of the receiver is required. These "phase-front detector" sets use the time-difference-of-arrival (TDOA) principle, which ignores amplitude variations in the signal. No attenuator is required with them.

The above three sets all use left/right LED indicators to show deviation of the signal from the bearing line. The Handy Tracker[7] is a simple TDOA set with two audible null patterns to resolve the front/back ambiguity instead of LEDS or a meter. It uses only one IC and has a smaller antenna pair.

Sets which give only a front/back bearing line and do not resolve the ambiguity are also available. These are not recommended because they give you a 50/50 chance of going the wrong direction.

Objects near the observer such as concrete/steel buildings, power lines, and chain-link fences will distort the incoming wavefront and give bearing errors. Even a dense grove of trees can sometimes have an adverse effect. It is always best to take readings in locations which are as open and clear as possible, and to take bearings from numerous positions for confirmation. Keep taking bearings as you move along to "eyeball average" the readings. Some TDOA RDF sets have a slow-response mode that aids the averaging process.

Because most TDOA's lack any indication of signal strength, it can be difficult to gauge distance to the fox. It is not uncommon to see a foxhunter walk over the top of a concealed transmitter and walk away, following the opposite 180 degree null, because he had no display of signal amplitude. To avoid this, keep moving and take bearings very frequently, verifying that you are still approaching by carefully observing the left/right indication.

TDOA sets were were plagued by cross-modulation from out-of-band signals when used with extended-range hand-helds in the 1991 Portland Friendship Games foxhunt. This can be a serious problem if there are strong VHF-FM transmitters nearby and the receiver's front end has very broad response.

Switched-pattern and TDOA sets use vertical antenna elements and usually do not perform well if the fox is horizontally polarized. IARU ARDF rules call for fox antennas to be horizontal. However, the HamCon/Foxhunt-95 foxes will be vertically polarized so that switched-pattern and TDOA sets can be used. It should be noted that experienced European foxhunters claim that DFing vertically polarized signals in the woods is much more difficult than DFing horizontal signals, because reflections from trees are more pronounced with vertical polarization.

To see homebrew and commercial equipment for foxhunting, come to the HAMCON-95 T-hunt forum on Saturday morning (September 2) at 9 AM on the Queen Mary. Mark your calendar for HamCon/Foxhunt-95 on September 3 and

plan to participate. Get your on-foot T-hunting gear ready. Have some practice hunts in your back yard. See you at the hunt!

RDF EQUIPMENT FOR EUROPEAN/ASIAN STYLE FOXHUNTING
Part 1 -- What the Rest of the World Uses

You might think that all competitors in an international championship RDF contest should be required to use the same type of equipment and that all sets should give identical performance. But equipment preferences and availability vary greatly from country to country, so this is not practical. IARU rules for championships instruct entrants to bring their own gear. Any type of RDF set is allowed, so long as it can be carried by the contestant and does not radiate any signals that would interfere with the hunt.

Preferences in equipment vary greatly from country to country. For instance, homebrew RDF sets and kits are very popular in Germany. Projects are featured regularly in ham magazines there. The same is true in Scandinavian countries. Australian foxhunters have traditionally built their own gear such as "whoopee sniffers" (portable receivers with audio S-meters), but the sport is becoming so popular there that commercial sniffers are now coming to market.

Almost all foxhunters in the former Soviet Union use commercial RDF units made at the Barnaul Radio Factory in southern Siberia. The Russian "Altai-145" is a complete two-meter receiver/antenna unit in one piece. The AM receiver is built into the boom of a 3-element yagi. The foxhunter holds it overhead and orients the yagi for loudest signal in the earphones. For safety in the woods, the yagi elements are made of curved steel tape that folds over instead of impaling the operator or breaking. The receiver is VFO-tuned (non-synthesized). There is no FM detector or BFO, but it has a quencher circuit that interrupts the signal at an audio rate to create an audible tone in the user's headphones. Slope detection of FM signals works fine. There is no S-meter. Sensitivity is low, approximately 7 microvolts threshold.

The Barnaul Radio Factory in Russia would like to sell its RDF sets around the world. They were used successfully in the 1993 Friendship Radiosport Games in Victoria, Canada. However, they cover only 144-146 MHz. (The two meter band includes only this range in IARU Regions 1 and 3.) Furthermore they lack the IF-stage selectivity required to perform reliably in the crowded band conditions of a typical US city. Stations up to 50 KHz away can cause serious QRM. They work much better in Russia, where two meter repeaters are a rarity.

In Japan, commercial foxhunt receiver/antenna units made by Mizuho are popular. The Model FRX-2001 features a synthesized receiver built into the boom of a two-element HB9CV phased array beam, with selectable AM and FM detection. The phased array is smaller than an equivalent yagi, making

it excellent for use in the brush. Electronic attenuation and audible strength indication are included, along with an S-meter. An audio-pitch signal strength circuit feeds one channel of stereo headphones, with receiver audio in the other channel. The FRX-2001 tunes 144-146 MHz, but can be changed to cover 146-148 MHz by a simple modification of the synthesizer. This unit is not marketed in the USA because the Mizuho importer does not believe that the cost of FCC Part 15 certification will be recovered by the small number of projected sales at strong-yen prices. Estimated retail cost in the USA would be well over $300.

Stay tuned for part 2, where I'll describe easy ways to get ready for HamCon/Foxhunt-95 using two-meter gear you may already have.

RDF EQUIPMENT FOR EUROPEAN/ASIAN STYLE FOXHUNTING
Part 2 -- Easy Ways to "Sniff" Foxes on Two Meters

There is no "standard" two-meter RDF setup for on-foot use by hams in the USA. Every ham who is experienced at "sniffing" has his or her own idea of what works best in a given situation. Try the various methods described below and see which ones you like most.

Handie-Talkie Tricks

Special sniffing gear is great if you can build or buy it, but you can usually find "foxes" with just a handi-talkie and simple accessories. The very simplest way to get a bearing with just your hand-held is to use the "body shield" technique. Hold your HT tight against your chest and turn around slowly, looking for the direction at which your body blocks the signal most effectively (the signal null). At this point, the signal is coming from behind you. When you are so close that you can't find the signal minimum, remove the HT's "rubber duck" and try again.

If the signal is so strong that you can't find the null, try tuning 5 or 10 KHz off frequency to put the signal into the skirts of the IF passband. If your hand-held is dual-band (144/440 MHz) and you are hunting on two meters, try tuning to the much weaker third harmonic of the signal in the 70 cm band while performing the body shield.

For more controllable signal reduction on two meters, use a "waveguide attenuator" made from a sturdy pasteboard tube about 3 feet long and 4 inches diameter. Cover the outside of the tube and one end completely with aluminum foil. For durability and to prevent accidental shorts, wrap packing tape over the foil.[1]

To use this attenuation scheme for body fade bearings, hold the tube vertically against your chest and lower the hand-held into it until the signal begins to weaken. Holding the receiver in place, turn around slowly and listen for a sudden decrease in signal strength. If the null is poor, increase the depth of the receiver in the tube and try again. You do not need to watch the S-meter, which will be out of sight in the tube. Instead, use signal quieting to estimate signal strength. For extremely strong signals, remove the HT's antenna or extend the wrist strap with a piece of string to get greater depth into the tube.

The body fade null, which is rather shallow to begin with, can be obscured by reflections, multipath, nearby objects, etc. Step well away from your vehicle before trying to get a bearing. If you can, stay away from large buildings, chain-link fences, metal signs, and the like. If you do not get a good null, move to a clearer location and try again.

Using Directional Antennas

International championship foxhunters prefer RDF sets with a sensitive RF-gain-controlled receiver and a simple directional antenna. You could carry the 4-element yagi or quad that you normally use for mobile hunting, but it's rather large and cumbersome. You don't need that much gain and pattern sharpness.

International hunters frequently choose two-element phased arrays such as the "HB9CV" and "ZL Special" because their close spacing makes them easy to carry. They are often made of curved steel elements (like a steel tape measure) so they are less likely to cause injury when crashing through the brush at running speed. These antennas have modest gain in one direction and a null in the opposite direction. Multipath tends to fill in nulls, so the peak response is almost always used for obtaining bearings.

Another good sniffing antenna is the Shrunken Quad.[2] It is more compact than a yagi or phased array and is safer because it does not have long pointed elements. It is somewhat tricky to tune and has a narrow bandwidth (about 500 KHz), but it is an excellent choice if most of your hunts are on the coordinated frequency (146.565 MHz).

Much of the time, you can use your handi-talkie's S-meter to take bearings with your small RDF antenna. When you get so close that the S-meter goes off scale, you will need to reduce (attenuate) the signal into the receiver without affecting directivity. Simple resistive RF attenuators that are commonly used for mobile hunting will be of limited use, because the signal will bypass the attenuator and and go through the receiver case by the time you have put in a few attenuation steps. To reduce direct pickup by the receiver, you can make a shielded box for the HT. You can also try putting the HT in a hollow tube as described above.

There is another kind of attenuator, called an "active," or "offset" attenuator that converts a strong on-frequency signal into a weaker off-frequency signal. To use it, tune your receiver to the offset signal, which can be adjusted for attenuation of as much as 100 dB. Signal leakage into the receiver case is not a problem with this kind of attenuator. Construction plans have been published,[3] and a commercial version is available at reasonable cost.[4]

If you have a dual-band hand-held, you get will the equivalent of 40 to 60 dB attenuation by tuning it to the third harmonic of the hunt frequency. A small UHF yagi or quad will give sharp bearings on the hidden T's third harmonic when you are within a few dozen feet.

If you aren't over your Visa card's credit limit, watch for part 3, where I'll describe specialized sniffing gear that's available and popular in the USA.

The June 1995 FAQ is a wee bit out of date. Here's the current revision:

THE INTERNET DX MAILING LIST: OPERATIONS MANUAL

Comments or additions should be sent to: lyndon@ve7tcp.ampr.org.

Last updated: August 9, 1995

Introduction

WHAT IS THE INTERNET DX MAILING LIST?

It is an electronic mailing list dedicated to the discussion of Amateur Radio DXing. This is the place to exchange tips and techniques, discuss hardware (rigs, antennas, DSP add-ons), awards, DX related software, announce upcoming DXpeditions, etc. Anything and everything pertaining to DX is fair game, with the following exceptions:

+ Park your flames (and egos) at home. This list is for constructive commentary. If you don't like the way something is done, we don't want to hear about it unless you have a positive and constructive solution or alternative. (Perpetual whiners will be banished to 160 KHz with a 10 mW transmitter, and will not be admitted back to the list until they achieve DXCC honour roll on that band.)

+ Don't send requests for QSL info to the DX mailing list. You can obtain QSL information via e-mail by sending a message to qsl-info@aug3.augsburg.edu. Include in the message body the callsigns you want QSL information for - one callsign per line. This service is operated by Ray Rocker (WQ5L). Please direct questions or comments to him at rrrocker@rock.b11.ingr.com.

+ Discussion about contests and contesting should be kept to a minimum. The CQ-Contest list already provides an excellent forum for contest related discussions. (To subscribe to CQ-Contest, send an e-mail request to cq-contest-request@tgv.com)

Subscribing, Unsubscribing, and Administrivia

HOW DO I SUBSCRIBE TO OR UNSUBSCRIBE FROM THE LIST?

A robot maintains the mailing list subscriptions. To subscribe or unsubscribe you need to send a message to

dx-request@ve7tcp.ampr.org. The body of the message contains commands for the robot. To subscribe to the list include the following command in the body of your mail message:

subscribe [address]

To unsubscribe use this command:

unsubscribe [address]

[address] refers to your e-mail address, and is optional. If you don't specify an explicit address the robot will extract it from your message. You don't need to specify an explicit address unless your mail software mashes up your return address, or you're changing your subscription from a different address than you usually use. If you do specify an address, leave out the '[' and ']' characters. If you get stuck you can send a message with only the word HELP in the body. This will tell the robot to send you help about the commands it understands.

Mail from the list might not cease immediately after you unsubscribe. Due to the way mail is handled, you will receive any messages in the delivery queue (but not yet delivered to you specifically) at the time you unsubscribe. This should only amount to two or three messages.

Problem Sites

Due to chronic configuration or connectivity problems subscription requests from the following domains are no longer accepted:

+ demon.co.uk
+ thetech.org
+ wa3dsp.ampr.org
+ nadc.navy.mil
+ niftyserve.or.jp
+ leo.nmc.edu
+ n2njh-5.ampr.org

Demon subscribers should contact Paul Hirst via e-mail at paul.hirst@lincoln.oxford.ac.uk for an alternative method of receiving the DX list.

WHAT ABOUT THESE DUPLICATE MESSAGES?

Before you panic, check the mail headers. Many complaints about duplicates are really messages sent to more than one list. If you are subscribed to both lists (for example, the DX list and the CQ-Contest list) you will receive two copies of the message - one from each mailing list. This is not a bug.

Unfortunately, duplicate messages can also be caused by mailers at the receiving end of the mailing list. I take precautions to prevent error messages and the like from escaping back to the

mailing list, but you would not believe the amount of totally broken mail software out there on the Internet these days.

If you receive one or two duplicate messages, ignore them.

If you receive more than one or two duplicate messages, and if you can extract the Received: headers from the message, you can forward copies of the message with the Recieved: headers intact to lyndon@ve7tcp.ampr.org. If you cannot include the Received: headers DON'T forward the messages. I can't debug the problem without them.

DO NOT send mail about the problem to the entire mailing list! The list subscribers cannot do anything to fix the problem, and have probably figured out for themselves that something is wrong.

IS THE MAILING LIST ARCHIVED?

Yes. Archives (starting from Mid-June 1995) are available via anonymous FTP from ftp://ve7tcp.ampr.org/mailing-lists/archives/dx/.

If you don't have FTP capabilities you can retrieve the archives from the mail server. Send a message to listserv@ve7tcp.ampr.org with the command

INDEX DX

in the message body. In return you will receive a message listing all the files available for retrieval using the GET command.

Those of you with Web browsers should use the interface provided at http://ve7tcp.ampr.org/mailing-lists/INDEX/dx/.

HOW DO I SEND A MESSAGE TO THE LIST?

It's easy! Just send an e-mail message to: dx@ve7tcp.ampr.org. Your message will be automatically resent to all the mailing list subscribers. Depending on the load on our mail system this could take anywhere from a few minutes to several hours. If you don't see your message within a day or so, send a message to lyndon@ve7tcp.ampr.org (NOT the general submission address) and I will look into the problem.

Here are a few things to keep in mind when sending a message to the list. If everyone follows these guidelines it will help the list operate smoothly.

+ Make sure your subject line is appropriate. If a conversation wanders off the original topic, change the subject line to reflect the new line of discussion.

+ Proofread your message before sending it! Spelling mistakes and poor formatting do nothing to help you get your message

across.

+ Keep it short! Many subscribers pay for their e-mail access. Don't include 100 lines of the message you're replying to and then add a three line contribution. Only include as much text as is necessary to establish the context for your reply.

+ Watch your language! This list is gatewayed onto packet radio. Don't say anything that you wouldn't (or shouldn't) say over the air. Anyone violating this rule will be dropped from the list immediately!

+ If someone asks a question, send your answer to them directly. The person asking the question should collect the responses, then send a summary to the list. This helps cut down on unnecessary list traffic.

+ Eschew flamage. If someone sends a flame to the list and you can't bite your tongue, send your flaming reply directly back to the flaming individual, not back to the list. No one wants to pay $1.00 to read these messages (the original flame + your reply). Treat flamers the way you would two-meter repeater jammers - ignore them.

+ Make sure there is something of value in each message you send to the list.

WHEN I REPLY TO A MESSAGE USING MY MAILER'S REPLY COMMAND I NEVER SEE A COPY OF THE MESSAGE COME BACK FROM THE LIST. WHY?

There are two possible causes. One is that your mailer sends the reply only to the originator of the message. In this case you will have to manually CC the mailing list. The second possibility is that your mail reader is so ancient and broken that it sends replies to the "envelope" from address instead of the From: or Reply-To: header values. If you are in the att.com or microsoft.com domains you want to double check for this second problem. Note that replies sent to the wrong address get filed in the bit bucket.

Copyright and Other Legal Muck

CAN I REPRODUCE MATERIAL FROM THE MAILING LIST?

No compilation copyright is asserted over the mailing list. The individual submissions to the mailing list may be (and probably are) covered by national copyright law, and international copyright conventions. When in doubt, consult a lawyer.

If you do reproduce information obtained from the list in a published newsletter please give credit to the message author and the mailing list.

WHERE CAN I OBTAIN BACK ISSUES OF THE VARIOUS DX BULLETINS?

An incomplete archive of DX related bulletins is available via
anonymous FTP from ve7tcp.ampr.org:/bulletins/. I add back
issues as I come across them. Feel free to contact me if you
can help fill in the holes. At some point I hope to set up a
WAIS search index that will let you do keyword searches on the
bulletins in the archive.

From: jlowman@netcom.com
Message-ID: <jlowmanDDL1AL.5E4@netcom.com>
Source record: 240099

The upcoming Southwestern Division Convention in two weeks will be my first. Just wondered if anyone knows the agenda, in particular for the first day (Friday)? I hadn't planned to get there much before early afternoon that day.

Also, I booked a room at the Hyatt. Anyone know if the Queen Mary is walkable from the hotel? Last time in Long Beach, we stayed at the Hilton, and I know it was a good drive from there.

So far, we have received only a postcard confirmation of our convention/dinner reservations. Is more forthcoming?

Thanks in advance and 73,

Jim

I once was up on the roof trying to fix my 80M dipole one afternoon to meet the state net before an afternoon thunderstorm rolled in. I couldn't figure out for a while while I kept getting tingles every time I tried to bring one leg of the antenna up to the center insulator so I could solder it back on to the feed line. Then I realized--I was sitting on the roof, holding 65' of wire in each hand, waiting for a thunderstorm...Sheesh, what idiots we can be! I finished the job in a hurry with my INSULATED pliers (not that they would have done me much good if the storm got much closer!) and scrambled back downstairs.

(Made the net, though...)

Hi,

Ham Fair'95 will come on Aug. 25-28. Ham Fair is a biggest fair for
Ham in Japan. Japan Amateur Radio League will work a radio all of
ham band, 8J1HAM. We, Packet Radio User's Group will join the fair.
We will work a WWW server at HAM FAIR, "www-harumi.prug.or.jp". You
can access the server Aug.25-28 from the Internet. And we will work
a real time broadcast from Ham Fair by Cu-SeeMe. Our reflector will
be "reflector.prug.or.jp".

www-harumi: 163.213.30.1
reflector: 163.213.1.100

We are also working a www server every day, "www.prug.or.jp" and
an anonymous ftp server, "ftp.prug.or.jp".

If you have any question for this project, please contact to
"ham-fair-inet@tama.prug.or.jp".

A simple check of the callsign database would have saved you the
need to be forgiven; my callsign is in my .signature. Maybe
you should actually read a thread and figure out what is actually
being said before starting off on the condescending lectures.

Don't take said Extra as typical. Anectdotal. You would prolly like to
think you know more than your average Extra, but you don't. Otherwise,
1) you would have earned the grade; and 2) you'd realize that CW really
is the fundamental commo mode.

BTW, Adv was the hardest am lic to earn. After Adv, Extra theory was a
piece of cake; it was the code that held me back. Then put your back
into it and learn it and stop yer bitching.

If I've got this whole conv wrong, forgive. But Extra-bashing always
seems to occur amongst those who haven't yet earned it.

Mean while I'll todder away on my straight key .... And keep in mind, I
'fully support' GMDSS -- when you learn >that< means, kiddo, then we can
talk, eh?

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 18/2330Z AUGUST 1995 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 18 AUGUST AND FORECAST FOR 19 AUGUST - 21 AUGUST

1A. SOLAR SUMMARY
Activity: low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 72/8

GOES satellite data for 17 Aug
Daily Proton Fluence >1 MeV: 4.3E+05
Daily Proton Fluence >10 MeV: 1.6E+04
Daily Electron Fluence >2 MeV: 9.6E+08 (high)
X-ray background: A1.0
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
19 Aug 20 Aug 21 Aug
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 19 Aug: 72/8

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: quiet

Estimated Indices : A K Observed A Index 17 Aug
Learmonth 5 2211 1221
Fredericksburg 5 12
Planetary 8 12

Observed Kp for 17 Aug: 2224 3322
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
19 Aug 10 Quiet to unsettled
20 Aug 15 Unsettled
21 Aug 25 Unsettled to minor storm
COMMENT: IPS Geomagnetic Warning 20 was issued on 18 August and is
current for interval 20-21 August. Coronal hole associated
geomagetic activity is expected 20-21 August.

3A. GLOBAL HF PROPAGATION SUMMARY

LATITUDE BAND
DATE LOW MIDDLE HIGH
18 Aug normal normal normal
PCA Event : None.

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
19 Aug normal normal normal
20 Aug normal fair fair
21 Aug normal fair fair-poor
COMMENT:Degarded HF comms conditions are expected at mid to high
latitudes 20-22 August.

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Observed
DATE T index MUFs at Sydney
18 Aug 17 near predicted monthly values

Predicted Monthly T index for August: 15

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T index MUFs
19 Aug 20 Near predicted monthly values
20 Aug 20 Near predicted monthly values
21 Aug 10 Near predicted monthly values/depressed 10 to 15%
COMMENT: Darwin MUFs: near predicted monthly values, with some spread
F observed near dawn.
Townsville MUFs: near predicted monthly values with blanketing
sporadic E observed 04-09UT.
Hobart MUFs: near predicted monthly values.

[Yup; this is all I got this time...]

WICEN News

Members are advised that with the closing of the VK2AAB packet BBS, publicity items should be sent to VK2KFU at VK2DAA until the Divisional system VK2RWI returns.

The Hunter region is meeting on 21st August; Pauline VK2GTB is the Regional Commander, and all are invited. After the City Surf run, the next major event this month is the Shahzada Horse Enduro, run by Andy VK2XRX over 21st-25th August, but no further details have been provided. The closing date for newsletter contributions (including AGM reports) is 30th August; the State Co-ordinator, John VK2AMH, has agreed to act as a clearing-house for all the various file formats which no doubt will be submitted.

There are several events next month; the Cessnock MG Car Rally, run by Frank VK2XVJ, is on 10th September, and the VRA Bike Ride is on 17th September; we understand that a good showing here will be advantageous when the Sydney Olympics come around, so if you want WICEN to be involved in them then consider helping out here.

The Hunter region are running a training camp on the weekend of 7-8th October at Crangen Bay, Lake Macquarie; all Amateurs are invited (not just WICEN members), and further details can be obtained from Pauline VK2GTB on (049) 49-8786, or Frank VK2XVJ at VK2KLW. There will be further details in a later broadcast. Given that a recent survey showed that 75% of WICEN members wanted further training, yet only eight people indicated an interest in the now-cancelled Goulburn seminar, you might like to attend this event instead, which incidentally was made available as a result of a training grant from the VRA.

Those regions wishing to have their activities publicised on this broadcast are requested to get the details to the Publicity Officer, Dave VK2KFU, by Thursday night at the latest. Packet radio is the preferred medium, to VK2DAA, VK2OP, or VK2GJB; please note that that VK2AAB system has shut down, but the Dural facility is expected to return.

-- Dave Horsfall VK2KFU, WICEN (NSW) Inc. Publicity Officer

Magazine Roundup

Here again is a summary of the local magazines, which in the author's opinion could be of interest to Amateurs. This week we discuss the August issues of the various magazines.

"Electronics Australia" discusses the perennial problem of whether Morse Code is still relevant or not; the series on simple transistors circuits, aimed at beginners,is continued; a "parallel port breakout box" will be of interest to those having trouble with their printers (which appears to be confined to those running DOS-boxes); a general purpose 1.5A regulated power supply is constructed; and vintage radio buffs can read the story of Oscar Hammarlund.

"Silicon Chip" builds a one-chip preamplifier with a constant level output; those who like to keep an electronic eye upon their cars can build a fuel injector monitor; and an extremely loud alarm module is constructed.

"Amateur Radio" continues the Morse Code debate; a "Tower Delta Vertical Phased Array" is described; the venerable IC-22S is extended to 48 channels (although the article as published has several typographical errors); a switchable voltage multiplier is mentioned, as is a simple RF current probe; the performance of tri-band beams with traps is debated; a VXO for the "Back to Basics" receiver and transmitter turns it into a transceiver; Novice Notes continues the discussion on what makes a good receiver; there is an interesting article on how CTCSS tones on repeaters can cause various problems; and a rather poignant poem, on Deceased Estates, is worth reading.

"Radio and Communications" describes the Internet and the information that can be accessed; the NOAA-14 weather satellite is discussed; the TS-440 and TS-440S, the IC-735, and the PRO-43 go under the surgeon's knife; an interesting "superior" dipole, based upon long-forgotten designs, is constructed; "Linux", a free version of the popular "Unix" system (and upon which the forthcoming Divisional TCP/IP packet system will be based) is explained, with emphasis upon Amateur radio applications; those following the fortunes of the "GRN" network will find a list of frequencies and locations; air-band listeners can find out about balloon flight frequencies; packet radio principles are again explained; and Police helicopters are scanned.

Be listening next month for another summary of the local magazines.

-- Dave VK2KFU

NEWS BRIEFS

"Telstra (with GEC Marconi Systems) and Rockwell Systems Australia are in the running for the design and building of the Department of Defence's $500 million high frequency (HF) radio station net-work.

"Both companies will get Defence funding for project definitioN studies, with a decision on the contractor for the network being made in October next year, Defence's project director, Captain Ian Noble said.

"The system will support all Australian Defence Force long range mobile land units.

"Network stations will be in the Riverina, near Townsville, Darwin and North-West Cape."

-*-

"Orthopedic trauma product" manufacturer, OrthoLogic Corporation, has developed a product that uses electromagnetic fields to help broken bones to heal more quickly.

The company claims that, by producing (quote) "a very specific electronic field that uses a static field and a dynamic field" (whatever that means!), the device can produce in just thirty minutes the same healing effect as several hours of traditional therapy.

Meanwhile, researchers at Stanford University in Palo Alto, California have developed a system that can produce three-dimensional images of the internal bone structure of hospital patients. In the past, medical staff had to analyse bone structure based on two dimensional images or by measuring bone mass.

With the new system, researchers can take two dimensional bone images, and construct a three dimensional image in software. The next challenge is to grow bone tissue under laboratory conditions and analyse its structure as it grows. Thus, scientists hope to gain a better understanding of the effects of osteoporosis, and of the hip fractures that plague older adults.

SUMMARY BY PAT VK2JPA ANARTS BROADCAST OFFICER

CLUB NEWS

AUSTRALIAN AMATEUR PACKET RADIO ASSOCIATION

In the August issue of Amateur Radio magazine, an item in "WHAT'S NEW" referred to the formation of this Association. Since AAPRA is now at least 10 years old the news of its formation has obviously taken some time to reach A R.

With regard to the modem kits we normally supply a simple modem built up ready-to -go which will run TPK , BAYCOM and similar software type programs including TCPIP. We do have PC boards and construction details but the components can be obtained from the electronics supermarket near you.

AAPRA, being the Australian distributor for PAKET 6 and BAYCOM, can supply software and manuals for these programs . Our shareware library has other programs of interest to Amateurs -including the NOS family.

AAPRA can be contacted through: VK2IN @ VK2DAA
VK2IN QTH in Callbook
Phone Sydney 489-4393

ANARTS News Bulletin 871 13TH AUGUST 1995

HUBBLE DISCOVERS NEW MOONS ORBITING SATURN

Astronomers using NASA's Hubble Space Telescope have announced the discovery of at least two, and possibly as many as four, new moons orbiting the giant planet Saturn. Their discovery is based upon images taken on May 22, 1995, when Saturn's rings were tilted edge-on to Earth.

Amanda S. Bosh, of Lowell Observatory, Flagstaff AZ, and Andrew S. Rivkin, also of Lowell Observatory, and the University of Arizona/Lunar and Planetary Laboratory, reported the discovery in the July 27 International Astronomical Union telegram (Circular No. 6192).

"We were excited to see new satellites in the Hubble pictures. This was not a primary goal of our observations, so we were quite surprised," said Bosh.

Two of the satellites seen by Hubble are in orbits similar to those of a pair of moons, called Atlas and Prometheus, discovered in 1980 by the Voyager 1 and 2 spacecraft.

"If these two satellites are the same seen by Voyager, then their orbital longitudes are different from what we expected," said Bosh.

Additional Hubble observation of Saturn, taken when the Earth again crosses the ring plane on Aug. 10, will provide more images that will be used to determine whether two of the four satellites detected by Hubble are truly new or not. If all four satellites are new, then the total number of known moons orbiting Saturn will grow from 18 to 22.

Two of the new moons (called S/1995 S1 and S2) lie inside Saturn's thin, eccentric "F" ring; a third moon (S3) lies just outside the F ring; and the fourth moon (S4) is 3,700 miles beyond the F ring. The moons are no bigger than about 45 miles across.

Hubble's sharp view is ideal for detecting faint new satellites that have previously gone unseen. The astronomers

identified the new moons by first processing the Hubble pictures to remove a residual light from the ring edge, and noting the locations of Saturn's known satellites. After this was done, the researchers saw four objects moving from frame to frame that did not correspond with any of the known satellites.

"With the exception of S4, which we're having trouble finding in a few frames, we can follow the other three satell-ites for 10 hours as they go around the planet," said Bosh.

Saturn ring plane crossings happen only once every 15 years and historically have given astronomers an opportunity to discover new satellites that are normally lost in the glare of the planet's bright ring system. Astronomers discovered 13 of Saturn's moons during ring-plane crossings from 1655 to 1980. Other satellites were identified during the Voyager spacecraft flybys of Saturn in the early 1980s.

After the upcoming Aug. 10 ring plane crossing, the next such event that will be visible from Earth will be in the year 2038. Saturn will be edge-on in 2009 and 2025, but will be too close to the Sun, as seen from Earth, to be observed.

SOLAR ACTIVITY WAS LOW ALL WEEK.

THE GEOMAGNETIC FIELD AT LEARMONTH W.A. WAS QUIET 4TH TO 6TH AUGUST, QUIET TO UNSETTLED 7TH TO 10TH, WITH A BRIEF ACTIVE PERIOD ON 9TH.

iONOSPHERIC F2 CRITICAL FREQUENCIES WERE NEAR NORMAL DURING LOCAL DAY 4TH TO 9TH AUGUST, AND ENHANCED DURING LOCAL NIGHT BY 15 TO 30 PER CENT 4TH TO 7TH, AND 9TH, AND ENHANCED TO 50 PER CENT DURING LOCAL NIGHT ON 8TH. FREQUENCIES WERE ENHANCED 15 TO 40 PER CENT ON 10TH. SPREAD F WAS OBSERVED DURING LOCAL NIGHT ON 4TH TO 7TH AUGUST, WITH OCCASIONAL SPORADIC E ON LAYER AT NIGHT ON 5TH.

FORECAST
(11 AUGUST - 17 AUGUST)

SOLAR: VERY LOW

GEOMAGNETIC: QUIET TO UNSETTLED, WITH POSSIBLE ACTIVE PERIODS
12- 14 AUGUST.

IONOSPHERIC: NEAR PREDICTED MONTHLY VALUES

Notes of Interest:

COCOS Is, TI9 - TI2JJP was to have been active on RTTY
as TI9JJP during the first half of August but there have been
no reports to date.

The first award in the '95 IN 1995' contest sponsored by the
International Digital Radio Association (IDRA) goes to OZ5MJ.
He worked 95 digital DXCC countries by 21 May 1995. His
counters included such nice ones as A4, CO, J6, JW, OD, SV9,
TY, TN and an assortment of VP8's. You can still receive an
attractive certificate for this contest. See the Digital Journal,
Dec. 1994, p. 25 for details.

The VK2SG RTTY DX NOTES are also available on Internet via
Tel-net or FTP at ab6z.ampr.org,

at reflectors dxatve7tcp.ampr.org,and digital-dxatst.rim.or.jp

See also the OH2BUA WebCluster at URL

http://www.clinet.fi/ ~jukka/rtty.html

For next week's bulletin, send your bandpass and notes of interest to Luciano, I5FLN at ZS5S.ZAF.AF

Ohio/Penn DX Bulletin No. 216

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, AD1C, N2MIP, WB3LUI, K8YSE, N8HTT, K9AJ, KG9N, K0EU, 4X6TT, DF4RD, F5JYD, G3NUG, G4BUE & DXNS, HP2CWB, HS1NIV/5, JF1MGI, JH2PDS/1, OK1ADM and DL9GOA & DX News Letter for the following DX information.

3W, VIETNAM. Nickolay, 3W5FM, continues to be active on CW/SSB/RTTY mainly on 20 meters between 1000 and 1400z, but JA sources report RTTY activities on 24923 kHz at 1044z and on 18103 kHz at 1050z. He will be there until September, or October if possible.

C6A, BAHAMAS. Chuck, KG9N, will be operating as KG9N/C6A from Abaco Island, August 11-18th. He plans to be active on RS-12 and participate in the WAE CW Contest.

CENTRAL AMERICA DXPEDITION. Ulis, WB3LUI will be active from El Salvador and Costa Rica. He will be active mostly on the lower bands 40 and 80 meters, and possibly the higher bands if MUF permits. Activity will be mostly CW. From August 12-20th, Ulis will be in El Salvador signing YS4/TI5NW and from August 20-27th, in Costa Rica signing TI5NW. QSL via the CBA of WB3LUI.

THIRD CANADIAN IOTA TOUR. Bruno, F5JYD, announced that F5SSM and himself will be active for the third time in CANADA (VE7), August 11-26th. They will be active from different islands for IOTA & C.IS.A awards. Activity will be on all bands (including the WARC bands). QSL via F5JYD.

TI9, COCOS ISLAND. Jose, TI9JJP, will be active until August 15th. If you miss him on this trip, you have a second chance to work him between October 4th and 20th. Look for him on 7050 kHz between 0200 and 0530z. Also check 14195 kHz at various times throughout the day.

VK9C, COCOS ISLAND. Uwe, DJ9HX, who was active this past week as VK9XI from Christmas Island, has moved on to Cocos Island signing VK9CJ. His activity should last until August 16.

XY, MYANMAR (BURMA). Reports state that a group of Japanese operators and Ray, HS0/G0NOM were active as XY1HT for a few days last week to demonstrate SSTV and RTTY to government officials.

Excerpts and distribution of The OPDX Bulletin are granted as long as KB8NW/OPDX/BARF80 receive credit.

3142. microphone pin out

Newsgroup: rec.radio.amateur.misc
Date: 1995-08-19 00:00:00 UTC
From: raphilli@ezinfo.ucs.indiana.edu
Message-ID: <413nif$8pr@usenet.ucs.indiana.edu>
Source record: 240224

Dear Jerry,

I have a manual for the Icom 751 transceiver. The pin outs are as follows:

1. AF input.
2. unused.
3. used for incrementing or decrementing the frequency.
4. unused.
5. P.T.T.
6. chassis ground.
7. shield for AF input.
8. unused.

If you need more information, I will be glad to copy all or part of the manuel and send it to you. Also I am assuming that this information is for the Icom 751 and not the Icom 751-A.

Good luck,

Rick Phillips

AM with 3 kHz max audio frequency will have 6 kHz bandwidth -- a
lot less than the 16 kHz bandwidth that is typical of the common 2
meter FM with the same audio bandwidth.

A very satisfactory split-screen terminal program for TNC's is Virtuoso
-- much better than ZTerm for ham use, with large type-ahead window. I
used it for AMTOR a while back, but have gotten out of it. The same
author offers a commercial product, Savant, that does AX25 packet.

That Mac Plus can do amazing things for the money! I run an SE, which is
a more reliable and updated version of the Plus, but not much faster
(except for my bargain accelerator I picked up along the way :-)).
While doing AMTOR with Virtuoso and a TNC on one serial port, I can run
ZTerm and a modem on the other to do BBS downloading! The Plus should be
able to do that too. On what other $15 computer could you do that with
reasonably current software :-)

Me too. My pocket cell-phone's useless on most of my 'remote' bike rides..
The CB walkie-talkie (sp?) is even uselesser. Not unless you can actually talk
redneck-retard.

Also.. Are most ham type portables so quick on the battery-drainage? My walkie-talkie can barely last
4hrs with NO transmitting.

>Gary you really are the biggest BS'er on here!

He's funny sometimes when he wants to be, but you'll really get a
laugh out of the Extra the other day who said Morse code isn't
any modulation at all!!! He didn't even include a smiley!! Maybe
that Pellicio character is right; amateur standards sure have slipped
if Extras learn 20WPM code but don't even understand the most fundamental
modulation mode!! Maybe the time spent learning Morse code and then
ranting about would be better spent learning *radio theory*!!! It would
sure cut down on the appliance operator syndrome so commonly whined
about.

>GC>Note: while I'm having a bit of fun, all this is true. We really
>GC>could do single sideband Morse, and it should really be about
>GC>8 times more effective, just like SSB voice versus DSB AM voice.

Oh, I don't know, Brian. Take a few moments off from flaming people who
dare to be technical, learn a thing or two and maybe you could beat Gary
to the punch (though QEX (not QST) publishes the really interesting projects,
so you'd better off trying that first).

Take care!

Indianapolis Balloon Flight Sept 9

Windtrax 5 95, a continuing series of Amateur radio balloon flights for fun and education will be having it's first balloon launch at the New Agusta Public Academy in Indianapolis Indiana on Saturday September 9, 1995 at 7:30 am EST/CDT or 12:30 UTC.
The balloon will carry to 90,000 feet Amateur Television (ATV) on 439.250 vertical polarity showing two camera views and a color video Id'er. Transmitter power 1.5 watts.

GPS/packet on 446.000 running 1 watt with packet at 1200 baud showing latitude/longitude and altitude information.

And, a cross band repeater. Input will be in 144.300 FM with outputs on 444.850 at 250 mw and on 52.525 using a recrystalled and slightly tweaked baby monitor transmitter at approxmately 80 mw

A HF net on 3871 khz will be held to provide status and launch coordination.

All amateurs are invited to participate. Schools that wish to participate in this flight are encouraged to contact Doug Craig at the New Agusta Public Academy or Chuck Crist at (317) 787-6674 for more information on how to participate in this and future shool flights.

Sponsors of this flight are the New Agusta Public Academy and Chuck Crist, WB9IHS. Paul Bohrer, W9DUU and Terry Hudson, KT9V

Permission granted to distribute this announcement.

(a) I don't believe it, (b) if some "pros" are brooding over a useage
that became common before they were born, then the problem is entirely
theirs, and (c) maybe you should extend your term-correction crusade to
radiotelegraphy itself, since the method actually involves no -graphy.

3154. 2 Meter Amps and 440 Mhz.

Newsgroup: rec.radio.amateur.misc
Date: 1995-08-20 00:00:00 UTC
From: ki5xp@usl.edu
Message-ID: <416u7v$ma4@news.net-connect.net>
Source record: 240108

I've got a question that has probably been answered several times in this group, but since Im gonna ask again.

I am interested in purchasing a 2 meter amplifier for my vehicle. This is where I have a question. In my vehicle I've got a Kenwood 742, which is DualBand (at this time, no other "active" bands in this area) and would like to amplify it, but due to budjet (aint it the same for all of us??) the *really* nice RF Concepts Dual Band amp is out of the question. My question is this, If my main concern is 2 meters, will a straight 2 meter amplifier cause any signal degradation of my 70cm signal? Can I run a straight 2 meter amplifier, or do I *HAVE* to have a dual band amp? This is of course assuming that I have a less then 100w Comet DiPlexer in line, which would not handle the power Im looking for (+150w).

Help? Suggestions?

Charlie

M Lang (mlang@inst-sun1.jpl.nasa.gov) wrote:

: Thanks to all who responded to my original question. I appreciate
: your help. Yes, I'm a US citizen holding a US ham radio license.
: I'll probably operate only on 2m VHF. Is the frequency allocation same as
: here in the states?

Virtually identical. Repeater outputs are 145.1-145.5 (-600), 146.6-147.0
(-600) and 147.0-147.4 (+600). Simplex is found on 146.4-146.6 and
147.4-147.6, and the national FM calling frequency is the same as in the
USA (mind you, it seems to be underused).

Hmmmm..... this is very interesting. In Japan, Yaesu uses often uses
different product numbers for the domestic market. If the FT-1000MP
is known there as the FT-1011MP, then I'd guess it is an extention of
the FT-990 line up. The FT-990 is known as the FT-1011 series in Japan.

US/Europe Japan
FT-1000D FT-1021X
FT-1000 FT-1021
FT-1000MP FT-1011MP (???)
FT-990 FT-1011

Admittedly, it looks more like a FT-1000 series though. Should be la
nice radio, but I'm still pretty happy with the FT-1000D. :-)

I'd like to find a manufacturer of an rf-powered ID device that has no external power requirement, but is powered by an incoming microwave burst, it then responds with a brief transmission on another frequency -- usually giving a brief message, like an ID number.

Does this ring a bell with anyone? Would be interested in any technical referrences or mfgrs offering them for sale.

Thanks

Use spar varinsh and use several coats. Or boil the wood in parafine wax.
The poly urathane varnish will decompose in a short time from the UV.

Porch and deck enamal would probably last longer.

If you boil the wood in parifine be very careful. Do it out doors and use
an electric hot plate and have a fire extingusher for oil fires handy. This
is really dangours.

Good luck

I just went to the airport (Seattle Tacoma International) today and went through security at the international terminal since I was taking 2 radios to customs to get the customs forms for them. No problem at all at the gate. I had a dual band mobile in it's box and a 2m handheld. They were both in a cloth bag which I placed on the X-Ray belt. They did not even ask me to turn the handheld on.

This doesn't answer your question, but just a comment. I also have a Kenwood 742, and find the 50W together with a good mobile antenna (even a mag mount) does a great job.

I'm in S. California with alot of mountains, so when I'm reaching repeaters on nearby mountain tops, I have an advantage. But I also reach repeaters partially blocked by mountains, and do simplex, so I have had varied experience and find the 50W plenty. Of course, your situation might be different.

BTW, I have spoken to the owner of several repeaters here, and he says an external amp often causes problems when using autopatch because of changes to the tones when going through the amp (e.g. slight audio frequency shifting). I don't know any more about that, just passing on what I heard.

Suggestion: (Means I haven't tried it myself) Standard's ear microphone.
I talked with a bicycle mobile who used it to get rid of wind noise.

Advice: (Means I've tried it, and it works.) Get a 6 or 7 Ampere hour
"gel cell" (about 3 x 4 6 inches) and put it in the handle bar bag. You
can charge it with a Radio Shack wall cube charger. It gives you 12vdc
for high power and has 5 or 6 times the operating time of even the 1200
mili Ampere Hour NiCads. While not as fancy as a "Power Station", it's a
lot cheaper.

A "battery maintainer" solar panel (300 ma or so) will keep it charged if
you want to be completely "off the grid".

Sorry to ruin your day, but the only 2 meter amplify/440 pass through
amplifier I know of is another RF concepts product, VHF-160...

Be seated before reading further.

US$249.95 in HRO's spring-summer '95 catalog. The model that amplifies
on both bands is `only' US$40.00 more.

From: lewis@phoenix.phoenix.net
Message-ID: <lewis-2008951011300001@dial37.phoenix.net>
Source record: 240121

I am having a bit of trouble haering a single station and coping an entire qso on 40 meters novice band cw. I'll admit that the ears here aren't what they were twenty years ago and I need to know if a 500hz cw filter is the answer for me. I use a Yaesu FT-840 and have only been at this a few weeks, but I am beging to believe that I'll never get passed the hump. What few cw qso's I have had I have enjoyed and I really do want ot continue with this mode of communication.

My questions are;

Will the optional cw filter help me?

What sould I expect to hear after I install the filter?

Are there any options other than the Yaesu product for a cw filter?
Does any one make a third party filter?

Are there better ways to do what I need other than a cw filter?

Thanks in advance for what ever help you can give me.

I called Yaesu tech support. The MP is a 100 watt, with dual in band
vfo's, a new menu set up system, and new DSP section. That was the extent
of the technicians knowledge on the subject.

Our Search and Rescue team uses a great mic that would be ideal
for this purpose. I believe it's called the Hayden Dynamic Spike Mic.
It looks like an ear phone but it also works as a mice by picking up
the vibrations that pass through the jaw bone to your ear as you
speak, The result is a very sensetive high performance mic that
completely eliminates outside noise and is also non-obtrusive. They
work very well and sound good, We can speak in a whisper over the
radio while standing on the skid of a moving helicpoter (probably the
worst noise conditions possible). All the other station hears is us
not the background noise. I should warn you they aren't cheap, I think
we got them for about $100.00 each.

I am looking for information for building a Radio Interface Box(RIB)
for Motorola radios. If you have information or schematics, please
e-mail me at: bill@comm-data.com

Also, am looking for software that I can use to program hamfest
radio to the ham bands...or the radio commands and pin outs, so
I can develope my own software...

73,
bill

I don't think any talking about running "broadcast" AM here. That would
be wider than 6 KHz (would be more like up to 20 KHz). Commercial
quality voice telephony with 3 KHz audio requires 6 KHz bandwidth
(6K00A3E). Simply Bn=2M

Commercial quality FM telephony for the same audio requires 16 KHz of
bandwidth (16K0F3E). This applies to the typical amateur FM work
where the highest modulating freq is 3 KHz, the peak deviation
is 5 KHz, and the modulation index is 1. Bn=2M+2DK.

For: Emergency Management Agencies via Amateur Radio
Info: Communications Volunteers in Government Service
Info: Amateurs U.S. (@usa:Information), ACS, CAP, MARS, RACES
By: Auxiliary Communications Service (ACS), the volunteer
communications reserve of the State of California
Governor's Office of Emergency Services

Bulletin 392 Release date 8/21/95
MGT - Volunteers-Images & Issues 5/7

Today's professional communicator can provide astonishing
benefits, shouldering many a burden for an already
over-busy official.

Characteristics of today's professional communicators:

- They want to be - and expect to be - treated like regular staff.
- They are represented by and managed by the Radio Officer YOU
select for his/her people-management skills.
- They expect to learn agency policies, practices, procedures
and programs. They also want to learn what NOT to do.
- They take pride in working for you and your government.
- They don't particularly want to be introduced as a volunteer,
because that is actually a "dirty word" in a lot of places.
- Their thanks are earned in being a trusted agent and someone
you can count on to get a job done. The only difference is
you get a paycheck and they don't.
- Their Radio Officer has a key to the office, is given certain
responsibilities and authority; is entrusted to operate your
government equipment, vehicles and may have a telephone
credit card and pager supplied by the agency. In other words,
the Radio Officer is just as well equipped to respond as any
other key agency responder.
- The key officers and specified participants have a
government ID card the same as yours; not a leftover 1950
civil defense ID card. All of them have registration cards to
protect them and you in those states that have workers
compensation laws (or similar laws) that apply to them.
- They earn your trust to never abuse the symbols and tools of
your office. You trust them never to be an embarrassment to
you, to your program or your government.

The following is a QST

Japan finally acts to control the rise in its currency and maybe the price of your next ham station. Also, one of the biggest names in amateur repeater control technology shuts its doors. We'll have a Special Report. These stories and more on Newsline report number 940 coming your way right now!

(*****
JAPAN TRIES TO CONTROL YEN

Japan says that it is going to try to stop the rising cost of goods that it exports by placing several controls on its currency. This is good news for hams who have been contemplating the purchase of new equipment but have been waiting for prices to stabilize.
Among the measures announced by Finance Minister Masayoshi Takemura are the removal of limits on insurance companies' participation in syndicated loans and on their foreign currency loans. Also included in the action are other fiscal incentives aimed at stimulating greater domestic investment.
But international monetary analysts are still pessimistic that much can be done to reverse the upward spiral of the Yen and the devaluation of the dollar. They say that the measures were a positive step, but will probably not be enough to change the basic causes of the yen's rise in value versus other currencies. The yen's escalation the past two years has taken a major toll on Japan's corporate profits and added to fears that nations sluggish economy may soon slip back into recession. It's also the cause of an estimated 18% price increase on almost all goods including ham radio equipment, imported from Japan since January 1st of this year.
Right now the exchange rate is hovering around 90 Yen to the dollar. That's down about 8 yen since January when it was 82.
But don't look for prices on goods from Japan and other Pacific Rim nations to fall. There is a lot of catching up to do on profits that were lost before any price reductions begin. In fact more increases are expected before years end.
The bottom line. As expensive it is, that new radio you want might be a better bargain now that under the Christmas Tree in December. Some say an estimated 10% better bargain now, than at the end of 1995.

(*****
ACC - Rest In Peace

If you hear synthesized speech on a repeater in your city, chances are, that speech is coming from a repeater controller made by Advanced Computer Controls. As a small, California based firm, ACC grew to be the biggest name in repeater control technology during the mid 1980's. The company pioneered so-called talking controllers with synthesized speech and digital voice recorders. Today, there are an estimated 2,000 ACC controllers used on amateur repeaters across the U.S. But ACC's legacy has

come to an end. The victim of emerging technologies and high production costs. The company's demise leaves ACC controller owners in a precarious position.

When ACC introduced the RC-850 repeater controller in the early 1980's, no other controller approached the 850's features and capabilities. The 850's skyrocketing sales drove ACC into the national spotlight as the undisputed leader in repeater control technology. The company has even been compared to IBM for its innovation. In the mid 1980's, ACC expanded its product line by introducing lower priced controllers. At one point, ACC's market share was estimated at 90%. As the controller market continued to expand, however, newer technologies allowed competitors to produce controllers at lower cost. By the late 1980's, sales of ACC products which were built using early 80's technology were dropping. ACC had begun a slow tailspin, one from which it would never recover. In the last 3 years, ACC's share of the market has been estimated at only about 10%. On July 25th, ACC's dynasty ended when owner Ed Ingber, WA6AXX, sold most of his company's holdings to Link Communications in Sydney, Montana. Allan Overcast, KF7FW, owns Link Communications. Overcast bought the source code, vocabulary, parts and other proprietary information that make up the brains of ACC controllers.

"What we are going to do with it, we haven't yet totally decided. We are defiantly interested in using the voice library with our control systems and continuing to support some of the ACC products. As much on businessly possible for us. The biggest problem with the ACC product was it was designed in the early 80's and you can no longer get parts for it." Allan Overcast, KF7FW.

That's bad news for current ACC controller owners. When certain parts fail, Overcast says there is little chance replacements can be found. Link Communications is not providing technical support for ACC controllers, though Overcast says he will try to help owners in the search for parts. Overcast's company typifies what happened to ACC. Link Communications opened in 1989, unveiling its own controller, offering features ACC's high-end products could not match.

"We came out in 1989 with a controller that did more and was quite a bit lower cost. ACC did a bad thing. They had a good controller, but didn't continue to refine it and keep it current with technologies and with amateur radio. We continually, like the controller that we designed in 1989 was redesigned in 1993 to bring it up to current technologies to keep the controller current." Overcast

Overcast says his RLC controllers, which are designed with the latest technology available, may include some features previously found in ACC products. In the meantime, Overcast and other repeater owners agree that an era in repeater control technology

has ended.

"ACC set the standard. Just like IBM set the standard for the coin word you have heard 'IBM compatible'. Everybody tries to be like IBM. While in the controller market, everybody tries to be like ACC." Overcast

With the thousands of ACC repeater controllers still on the air, Overcast believes his already strong market share will grow even more. Sooner or later, he says, technology will fail. And when ACC controller owners find that parts are no longer available for their systems, Overcast says their only choice will be to upgrade from what used to be state of the art technology.

ACC had been advertising a new software release, Version 6, promising control capability using a personal computer. But Overcast says Version 6 has been shelved and will probably never be offered.

(*****
INTERNATIONAL LICENSE UPDATE

The Federal Communications Commission has assigned RM-8677 to an ARRL petition for rule making to implement U.S. participation in an International Amateur Radio Permit. A permit covering countries in the Western Hemisphere.
As previously reported, such a permit will allow temporary operation in any other country in the Americas that has signed the agreement. The only other requirement being that a person has to be a licensed ham in his or her home country.
The comment cutoff deadline on this matter is August 31st and□ the reply comment deadline is set for September 30th.

(*****
KV4FZ LICENSE HEARING

On the legal front, Herbert L. Schoenbohm, KV4FZ is waiting to hear weather or not the FCC will renew his ham radio license. This following an August 8th hearing in Washington, DC.
The FCC took the unusual step of designating Schoenbohm's license renewal request for public hearing following complaints. This, following the loss of his appeal of a 1992 conviction in federal district court.
The FCC says that Schoenbohms conviction is relevant to evaluating the likelihood that he will comply with the Commissions rules as a licensee in the Amateur service. Issues addressed at the hearing included Schoenbohm's qualification to renew his license and whether or not such a renewal will serve the public interest, convenience and necessity. A final decision in this matter is probably three to six months away.

(*****
KD5SL - PACKET PIONEER: SK

Some sad news. Word that one of the nations best known packet radio and repeater pioneers has passed away. Seventy-four year old Shelton Mc Anelly, KD5SL became a silent key on August 5th. Charlie Detrich KF5EK reports from Baton Rouge on the passing of a ham radio legend.

Shelton B. Mc Anelly, KD5SL, became a silent key Saturday, August 5th at age 74 apparently from heart failure. Shelton was discovered at his home by fellow hams KC5BMA and N5DXT and family member when for the first time in 10 years when he failed to check into a Sunday evening net.
KD5SL who was the ARRL Delta Division State Governmental Liaison, operated one of the nations largest HF BBS gateways as part of the national packet system. He was an original member of the HF skip net group and was one of the first BBS sysops to be granted unattended status by the FCC. Shelton was the founder and current President of the Radio Amateurs Service Club of Baton Rouge, the founder of the Baton Rouge Radio Society, a past president of the Baton Rouge Amateur Radio Club, and one of amateur radios greatest proponents. KD5SL received national, state and local recognition for his contributions and dedications to his community and ham radio.
Mc Anelly who was a Louisiana native served in the U.S. Navy during World War II, held a chemical engineering degree and was a retired patent attorney.
He is survived by 3 daughters, 2 sons, 16 grandchildren and 5 great grandchildren. At the time of his death, Shelton Mc Anelly,□ KD5SL, was in his ham shack surrounded by the world he loved, Amateur Radio.

Shelton Mc Anelly, KD5SL was laid to rest in his hometown of Franklin, Louisiana. His contributions to ham radio will live on for years to come.

(*****
CONGRESSIONAL VISITATION

The FCC has come under direct congressional scrutiny. House Republicans bent on shrinking the FCC spent much of Monday, July 10th touring the agency and apparently came away with a newfound appreciation of the regulatory body.
Eight members of the House telecommunications subcommittee chaired by Texas Republican Jack Fields took the FCC tour. Fields has scheduled hearings for later this summer on plans to radically downsize the agency that regulates broadcasters, cable TV operators and telephone companies.

(*****
AIRWAVES ON WYPL

WYPL Radio, 89.3 FM in Memphis, Tennessee launched its new Airwaves program on August the 2nd. Airing at 7:30 pm, the hour long hobby radio oriented program features new product reviews, interviews, a DX report, a calender of events, radio nostalgia, and, oh yes, Newsline.
If a public radio station in your area would like to audition the show for possible local airing in your community, please contact Mike Porter at WYPL FM. His phone number is area code (901) 725-8833.
Airwaves production costs are funded in part by the Corporation for Public Broadcasting. The show is being made available free of charge to any station by WYPL in cooperation with the Memphis Public library.

(*****
CBS.AOL

The CBS Network has announced that it is creating an interactive web site on America Online. The Hollywood Reporter says that the AOL site will be in addition to "CBS on Prodigy", the first broadcast network site online.

(*****
CINCI CELEBRATION□

Hams in the area around Cincinnati Ohio area will be active from October 11th to the 15th for the Tall Stacks celebration. Station K8SCH/TS will operate all bands and modes. A special QSL will be available for those making contact with K8SCH during the event. The Tall Stacks commemorates the historic importance of river commerce to the greater Cincinnati area.

(*****
ARIANE LAUNCH

Western Europe's 76th Ariane rocket placed a U.S. telecommunications satellite in orbit on Thursday, August the 3rd after a launch from French Guiana. The Ariane 44L rocket was equipped with two liquid strap-on boosters. It blasted off at 6:58 pm EDT from the European Space Agency launch center in Kourou on the northeast coast of South America. Twenty-one minutes after lift-off, the booster released PanAmSat-4, a 6,800 pound satellite into a transfer orbit for the Greenwich, Connecticut-based satellite operator PanAmSat. The satellite will be lifted in a geostationary orbit by an on-board propulsion system and is designed to operate for 15 years.
Arianespace, the Paris-based company that markets and launches satellites using ESA built Ariane rockets. An Ariane will carry the Phase 3D ham satellite into space in 1996.

(*****
SEDSAT HELP WANTED

Also, Dennis Wingo, KD4ETA, the SEDSAT 1 project manager says he is still looking for two graduate students who would be willing to attend the University of Alabama in Huntsville this year and work on SEDSAT. KD4ETA says that he wants ECE or software engineering students to work with us. Contact Dennis via e-mail to kd4eta@amsat.org.

(*****
DX

In DX, we have a number of items this week. First is word that the Democratic People's Republic of Korea has been added to the ARRL DXCC Countries List following receipt of documentation for the P5/OH2AM operation in May of this year. QSL cards for this new country will not be accepted until October 1, 1995, and the P5/OH2AM is the only operation currently accepted for credit. Another operation by Finnish operators is tentatively planned for the fall. P5/OH2AM is a demonstration operation that made about 20 contacts.
In another matter, the ARRL DX Advisory Committee has voted 15 to 1 to suspend further study of the status of Aruba until the Netherlands and Aruba have announced a change the current more toward independence for Aruba originally slated for 1996.

(*****
DX-HEARD

Also, more information on the upcoming Heard Island DXpedition. Ralph Fedor, K0IR, the expedition organizer, says that he has been in regular telephone contact with the charter company and skipper of the ship that will carry the expedition to Heard. Ralph says that all remains on schedule for a November 1st departure from Fremantle in Western Australia. The expected arrival date at Heard remains November 12th. The group will set up as fast as weather allows and plans on remaining on the island until December 1st. If all goes as planned, the operators hope to be back in Australia by December the 14th.

(*****
MIGHTY MO

A battleship that helped to win World War II is being heard from again, but this time on the ham bands.

The big guns of the "Mighty MO" will sound again, only this time they will be "Big Gun" transmitters of an amateur radio station set up to commemorate the 50th Anniversary of the end of World War II. A group of Seattle area amateurs will be manning a special events station on the USS Missouri during the celebration of the signing of the peace treaty with Japan. Tom Sanders, W6QJI, is heading up the project:

"We first got this idea in the fall of 1993. We were feeling good about the fact that we had pulled off a couple years earlier

a special event on the December 7th anniversary and somebody suggested, 'Hey why don't we do the 50th for the end of the war on the Missouri!'. That is where it started.
We got our written authorization from the navy to go ahead with the project in June of '94 and put together the organization. And it is rolling! What we are going to do is go onboard on the 25th of August and install and do some training. We will start operations on the evening of August 31st and operate through, probably noon or so on September the 2nd." Tom Sanders, W6QJI.

The special events station isn't the only activity on the ship that hams will be involved in. Tom says there will be much more than that:

"We also have a fourth HF rig down on the deck with a public display for the interaction with the public while they are onboard. We expect to have good TV coverage. We will also be providing communications for the coordination of the media for that weekend.
And, as perhaps you know already, about the commemorative ceremony that weekend. It's not part of our operation, but that will attract somewhere around 10,000 visitors and dignitaries from Washington and from all of the governments that were signatory to the original document on the Missouri." Sanders

The group is still waiting for the assignment of the callsign that will be used. Amateurs should look for the station at about 35 kilohertz from the bottom edge of each band segment, both voice and cw. QSL information will be given over the air, and a commemorative certificate will be issued to amateurs working the station.
The USS Missouri is berthed at the Pugeot Sound Naval Shipyard, in Bremerton, Washington. Visitors are welcome to see the station during it's operation. For more information, contact Tom Sanders via the internet, at ww2end@aol.com.

Should be available from tapr.org or muncey.com via anonymous
ftp.

Good luck,

Good Day to all. I am in the process to develop a database with Visual Basic
which would strictly address Ham radio issues.
The database would have:

1- A detailed database about the operator.
2- A detailed logbook.
3- A packet table
4- A repeater table
5- A Police table
6- A banished countries table
7- A list of Int'l abreviations table
8- Morse Code References from A to Z and 1 to 9 and HighAscii Char
9- Int'l Frequencies
and more....
Actually there is such software that I wrote in french and sold exclusively
in Quebec. Of course the version that I plan is totally in english to be sold
in English Canada and the US
If you have any other ideas that would be good to add, please reply
also if you wish to become beta tester let me know. Once completed, the software will be
available
vis FTP
Regards...

BC>How many hams use your "simpler than CW" circuitry today?
(FM transmitter that is)

CM>Almost exactly the number who use your keyed CW oscillator.
CM>FYI the CW circuitry in my IC-745 is pretty complex. The CW
CM>filters alone cost around $300 and my Bencher hand key cost
CM>$80. It came equipped for SSB and FM. I had to spend an additional
CM>$380 to get on CW.

NONSENSE! What pure _B_ _S_!

Cecil, there are plenty of amateurs on QRP using simple one and two
transistor rigs, some home brew, some kits. I mean THOUSANDS!
Yes, a number of them may also own your $4,000.00 commercial rig too.
BTW - if you are paying $300 for CW filters for an ICOM, you got taken!

CM>Actually, a carbon mike is a much simpler device than the average
CM>commercial Morse key. You can make one out of pencil lead.

Again, pure B.S. Hams DO use morse keys, but I don't know any that use
carbon mikes.

: Oh, do I really need receipts for my radio equipments? It has been
: a few years that I bought them and I don't think I still have the
: receipts...
: What will happen if I don't?

The worst that could happen is you have to pay duty on the fair market
value of your radios. OTOH, radios don't exactly seem cheaper in
Canada, so it's unclear why a US resident would go north to buy one.
I'd think the reverse is more likely.

You can register your stuff (including cameras and such) with US
customs BEFORE you leave the US, if you like. They can probably do
this at the border. That should cover you.

I consider a 500 Hz filter the absolute MINIMUM filtering needed for CW work these days. I really like 250 Hz and less, but the 500 will do the job in conjunction with IF shift or PBT controls.

The Yaesu filter will do fine for you. I don't know how hard the installation is, probably pretty simple, but get a friend to help if you haven't done it before! Find another ham who knows about these things....

The filter, when in line, will make things sound "thinner" and it will take more skill tuning in a station on CW. However, you will be able to tune in one station at a time now. And the background noise will be a little less loud.

There is another filter company you might check out, besides Yaesu, it is IRCI in Florida. They are not very helpful after the sale, but their filters are good, and less expensive than Yaesu, I believe. Check QST for the ads - International Radio and Computer Inc.

From: walter.schlifer@doghous.com
Message-ID: <307.1.476@doghous.com>
Source record: 240153

Greetings to all HAMS!

Currently, I am looking for any HAMS in Florida. I need some help/info.

Please respond to me, here, if you're a Tech+ or better in licensing. If you could also provide either your FIDO address/local BBS phone_number and if possible, your InterNet Address, I can explain more of WHY I am searching for HAMS in the Florida State.

In NO_WAY does this concern a business_adventure/concern. There are some persons' that I've contacted via InterNet who are in need of ELMERS' or at least some help towards a club or group.

Being in WISCONSIN, I have no way to help them on an individual_basis, as NEW HAMS so often need; I am waiting for your response; and will re_direct YOU to them as YOU respond to me!

Thx! 73's Walter Schlifer, N9NRF in La Crosse, WI

... ..._ "V"? Is that it? I heard that once in a movie...

> Tony
>

I have used transverters for 6m, 2m and 70cm on my TS-850.
I would put this configuration up against any all mode V/UHF radio
on the market.

The functions of the TS-850 continue to work on the converted bands just as
they do on HF ! The 850 accomodates transverters nicely. You can work any
mode that the IF radio offers...SSB/CW/FSK/AM/FM on the 850. Read your
manual...to use the I.F. low level output from the 850 to drive the
transverter you must go inside the radio and relocate a miniature
coaxial cable.(Once you do this, you do not have to go back inside to
change it back for normal HF operation.) You must also apply 12VDC
thru an RF choke to the I.F. line when using the transverters.
This energizes a relay that re-routes the low level output to the I.F. port
intead of to the HF power amplifier then out to the Antenna port.
You want to be sure that you don't forget to do this since amplified HF power
will most ceratinly fry the RX front-end of the transverter.

The *REALLY* nice thing about using the TS-850 with transverters is that it
can be set up to show the actual VHF or UHF frequency right on the display !!
(most other HF rigs require that you mentally add the I.F. to the L.O.
to derive at the operating frequency...they still show the HF frequency
when operating the transverter. No big deal but the 850 does this for
you !!)
I used the transverters mainly for SSB/CW though I did work some local FM
repeaters when I had the 2 meter and 6 meter transverters connected. The
NBFM from the 850 will work fine on the higer bands (same level of
deviation).

DownEast makes real nice stuff ! I built one of their 1296 Mhz
transverters. I've heard good reports about their 2 meter units !
JFYI, If you are interested in 6M, you should really look into the Ten-Tec
6 meter "T-kit". It is a very affordable ($95) 6m transverter kit...
complete and well worth the money ! I built and used one with my TS-50
in the car and worked dozens of grids plus some new countries this past
spring/summer Sporadic-E season.

Regards...Hugh Duff VA3TO Toronto

>
> I own a Kenwood TS 850s. Functions 26, 27 and 28 allow a 50 MHz, 144 MHZ and
> 430 MHz converter to be turned on or off. Can anyone tell me if there is a
> converter that I can buy (where can I get it?) for the rig? The manual makes
> no mention of this, with the exception of saying it can be turned on or off.
>
> Thanks and 73
> Bob, VO1RMA
>

Hi Bob...Menu functions 26,27 and 28 do nothing other than display
VHF or UHF frequencies.
Nothing is turned on or off except that the display shows the
actual frequency instead of having to mentally add the L.O. to the I.F.
when using a transverter. These menu funtions do not do any controlling
of a connected transverter per se.

There are no Kenwood or third party transverter made specifically for
the 850 but DownEast Microwave carries a full lineup of quality models
available in kit form or assembled. If you are interested in 6m you
should check out the Ten-Tec "T-Kit" 6 meter transverter kit...complete
for $95 USD.

Regards..Hugh Duff VA3TO Toronto

SB DX @ ALLBBS $OPDX.218
Ohio/Penn DX Bulletin No. 218

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 218
BID: $OPDX.218
August 21, 1995
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 216-237-8208 14400/9600/2400/1200/300 8/N/1

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, KQ4GC, KK6EK, W6OTC, W9ELB, ARI, DF4RD, G4BUE & DXNS, OD5SB, OE2DYL and DL9GOA & DX News Letter for the following DX information.

A7, QATAR. Thomas, DL9FCQ, will be back in A71-land towards the end of the year (December 29th and leaving January 14, 1996). He will be signing A71AN/DL9FCQ, and operate mostly in CW on 80-10 meters (including the WARC bands). QSL via the bureau or direct to: Thomas Backert, Freigerichterstrasse 26, 63579 Freigericht 1 Germany -or- P.O. BOX 1139, 63590 Hasselroth, Germany.

CONVENTION RADIANTISTICA INTERNAZIONALE HF-DX E IOTA will be held on October 13-14-15th in Bologna, Italy. The Associazone Radioamatori Italiani (ARI) will be organizing this event to celebrate the "First Centennial of the Invention of Radio". The convention will include the 11th International "Guglielmo Marconi" HF-DX Meeting, the 5th IOTA Convention, a Saturday Evening DX Dinner Banquet, DXpedition Videos and Slides, and much much more. For more details, contact ARI Organizing Secretary - Benedetto Marcello, 1-40141 Bologna, Italy -- Tel. (051) 48.13.46 - 47.19.02 -- FAX (051) 47.29.10

FR/T TROMELIN. On August 17th, Michel, FR5HG/T, was reported active on 14005 kHz around 0940z. European sources also have him active on 18078 kHz around 0020z and on 21002 kHz around 1700z. The DX News Letter states that Michel should be there for four weeks. QSL via F6FNU.

GU, GUERNSEY. DL2MGP, DF6MS, DL5MHX and DL1MIA will be active from IOTA EU-144, August 20-30. The group plans to have two stations active mainly on CW (one station running 100 watts and the other running QRP). QSL via the bureau to their homecalls or direct via: DJ3QG, Willi Borkowski, Kipfenberger Strasse 22, 85072 Eichstaett, Germany.

OD5, LEBANON (SPECIAL DXPEDITION). Rami, OD5SB, reports that the first DXpedition by Lebanese ham's will take place on August 27th, from Kornet el Saouda (3088 m), which is the highest peak in Lebanon. They will use the special callsign OD5LEB and be active on CW/SSB/Packet, HF and VHF.

PY0TUP QSL CARDS UPDATE. Dieter, OE2DYL, would like to remind everyone that he is NOT the QSL Manager for PY0TUP and that he does not have the logs. He also mentions that his special mail collection for the PY0TUP QSLs has ended on August 1st and everyone who participated will get a QSL at the end of September/October. So please in the future do not send QSLs to OE2DYL for PY0TUP. The only valid QSL route is to PY1UP at the moment: Mr. Joao Batista G. Mendonca, P.O. Box 3100, Rio de Janeiro, RJ 20001-970, Brasil, South America. Please QSL to him with 2 IRCs, no green stamps, and a SAE.

S7, SEYCHELLES. The DX News Letter reports that Hannes, DL3NEO, will be active as S79NEO between August 22nd and September 8th. Activity will be on 160-10 meters (except 80m) on CW and SSB.

SPECIAL EVENT STATION. To celebrate Marconi's radio experiments on the ship "Elettra" from 1919 to 1936 on the Ligurian Sea, special event station IY1EY will be active September 16-22th. Activity will be on CW/SSB/RTTY and all bands. A special QSL card reproducing Marconi's legendary boat "Elettra" will be available via I1QOD.

SV3, SFAKTIRIA ISLAND (GREECE). Werner, DL1BKK, will be active from this Greek island located in the Peloponnisos West Group (EU-158) between September 1st and the 20th for a few days. Since Werner is there on a family holiday, activity will be limited to only 5 or 6 days. He states that the days he will be active, he will have to load all his equipment onto a small rubber dinghy to make this trip to the uninhabited island. Werner will use the callsign SV3/DL1BKK/P and be active mainly on 14260 kHz +/-, but if there is a good opening on higher bands, he will QSY. QSL via CBA.

T32, EAST KIRIBATI. The DX News Sheets report that Tuck, KH6DFW, will be active September 5-11th, from Christmas Island. The call is unknown. QSL to home call.

TT8, CHAD. TT8NU likes to operate on 20 meters CW. He has been heard on various frequencies between 1615 and 2000z. Also check 17 and 30 meters according to DXNL. QSL via F6FNU.

V2, ANTIGUA. Bill, KQ4GC, will be active from here as KQ4GC/V2, September 6-14th. His activity will be on 80/20/15 meters SSB. QSL with a SASE to his home address: Bill Gallier, 4094 Sandy Run Drive E., Middleburg, FL. 32068.

VK9/LH, LORD HOWE ISLAND. Operators W6OTC, N4TQO, KE6FV and W6/G0AZT will be traveling to Lord Howe Island next month (arriving on September 19 and departing on September 26). They will take three stations with them and will be active on RTTY, CW and SSB. The callsigns that will be used are VK9LZ (on RTTY), VK9LX (on CW) and VK9NM (on SSB). They plan to be active on 160-10 meters (including the WARC bands). They will also be

a Multi/Single entry in the CQWW RTTY Contest. QSL all callsigns to Eddie Schneider, P.O. Box 5194, Richmond, CA 94805.

WW2END SPECIAL EVENT STATION (Celebrating 50 years of Peace on the Battleship Missouri BB-63). During the period of September 1-4th, the combined efforts of many amateur radio clubs/organizations will be participating in the celebration that honors the signing of the armistice ending hostilities between Japan and the United States.
An amateur radio special event station will be a part of this historic event and will operate with the amateur radio callsign WW2END. The WW2END operations will begin on September 1st at 1900 UTC, and will conclude at 1700 UTC on September 4th.

The scheduled WW2END primary operating frequencies (Mhz) are:

BAND FM CW SSB NOVICE CW NOVICE SSB
2m 146.520 144.050 144.110
6m 51.110 50.010 50.110
10m 28.010 28.510 28.110 28.310
15m 21.035 21.310 21.110
20m 14.035 14.235
40m 7.035 7.235 7.110
80m 3.535 3.860 3.685

QSL via W7DK (Radio Club of Tacoma, WA.). For information about this exciting event, contact USS Missouri Project, P.O. Box 450, Port Orchard, WA 98366 -- Phone (360) 876-1399 (W6QJI) -- Email: ww2end@aol.com

XR, EASTER ISLAND AND SALAS Y GOMEZ. Bob, KK6EK, would like to remind everyone that the DXpedition team will be active in about three weeks from Easter Island as XR0Y (September 5-18th) and from SyG as XR0Z (September 7-11th). He mentions that they will be active on 30 meters, but the conditions of their permit restrict them to use only 10100 to 10115 kHz. Bob also states the following: "We invite you to work us. Furthermore, since we want to acquire a database to study propagation, we will welcome you to dupe us on different days (please, wait until the pileups are reduced for your dupes). We will be asking for real signal reports, not the formal "599."

NEW!!!! VOICE OR FAX YOUR DX INFORMATION NOW! A FAX/ANSWERING Machine is now available 24 hours day. The number is 216-237-8208 which shares the same phone line as BARF-80 BBS using a data/fax/phone switch. To access: 1) Dial Number. 2) Wait for first ring (the second ring should be a false ring from the fax/data switch box) and then dial four quick ones ("1111"). (NOTE: Some FAX machines that send single "BEEPS" every second will not have to do this step.) 3) The phone will pick up and after the "BEEP" leave your voice message or FAX.

Excerpts and distribution of The OPDX Bulletin are granted as long as KB8NW/OPDX/BARF80 receive credit. To contribute DX info, call BARF-80 BBS online at 216-237-8208 14400/9600/2400/1200/300 and leave a message with the Sysop or send InterNet Mail to: aq474@cleveland.freenet.edu or send

BitNet Mail to: aq474%cleveland.freenet@cunyvm or send PRODIGY Mail to:

Christopher K Greenhalgh (cgreenha@magnus.acs.ohio-state.edu) wrote:

: One of the exmples they gave as "legal...but this is something we would have
: not wanted to listen to." was to order a pizza over the patch. Another example
: was listed as "Not legal", and it was calling work to say that you are going to
: be late. As a matter of fact, they also claim that a HAM that even calls
: another at home, to call into work for him, is in violation of FCC law as well.

The pizza thing has been reinterpreted as legal. WE've done it on our
repeater a few times. The way the FCC reinterprets part 97 is that you
can do PERSONAL business; i.e. call ur doctor if u r late, order pizza
etc. BUt if u call your office to say you are late that is pecuniary
interest and that is illegal even though it seems stupid.

You can call AAA if u r having problems also. You have to determine if
there is that pecuniary interest. THats the key. Also, IMHO, there are
too many repeater police out there. People need to lighten up a bit. A
club I used to belong to in NY during the 70's routinely did things now
that are taken for granted (we ordered McDonalds on 94 simplex).

True..but now you need additional Relays for switching
in/out the HF section. Not
impossible but I'm not sure if the display will correctly
show the frequency in use.
In the Xvt'r mode the display can show 50, 144, 432, etc ..
or at least per the Kenwood
rep I talked to it will. Almost got one until I found out
about the Jumper change.

Picked up the TS-690S instead which has 6 Meters and at a
lower cost.
Excellent Receive IMD, Sensitivty, and apparent low noise on
HF and 50 Mhz. Of course
you still need Xvtr's for the other bands. If I had to go

the attenuator route anyways
then the 690 gave me more for less.

BTW 144, 432, and up are Open! Been working out to 700
miles on 432. Should be good
tonight.

for our
current subscribers. Thank you.)

SEPTEMBER '95 "CQ" MAGAZINE HIGHLIGHTS

Here's what's scheduled to appear in the
September, 1995, issue of "CQ" magazine --
the Radio Amateur's Journal since 1945:

CONTESTS top the topic list for this
month's issue, including:
RESULTS OF THE 1994 CQ WORLD-WIDE DX SSB
CONTEST; RESULTS OF THE 1994 CQ WORLD-WIDE
RTTY DX CONTEST and rules for THE 1995 CQ
WORLD-WIDE DX CONTEST. Here's a sneak
preview:

THE 1994 CQ WORLD-WIDE DX SSB CONTEST -
Here's a partial list of trophy winners
(are you in their logs?):
Single-Operator
World / All Band: P40E (CT1BOH, op.)
World / Low Power (100w. or less): NP4Z
World / Assisted: P40W (W2GD, op.)
World / QRP (5w. or less): NP2Q
USA: K1AR
USA / Low Power: K2SG
Canada: VE2TJA (WB2K, op.)
Caribbean / Cent. Amer.: FM5DN
Europe: S59A
Europe / Low Power: EA7CEZ
Africa: EA8AH (OH1RY, op.)
Asia: H20A (5B4ADA, op.)
Japan: JH4UHW
Oceania: OH0XX/DU1
South America: 8R1K (AB6NJ, op.)
Multi-Operator / Single Transmitter
World: HC8A
USA: KC1XX
Europe: IQ4A

Caribbean / Cent. Amer.: VP2E
Oceania: V7X
Multi-Operator / Multi-Transmitter
World: PJ1B
USA: W3LPL
Europe: EM2I
Japan: JH5ZJS
Contest Expeditions
World / Single Op: XX9TZ (OH1BH, op.)
World / Multi-Op: 9G5TL
Special Single Op Awards
World / All Band / Under Age 21: P39P
(5B4AFM, op.)
World / All Band / High YL: PJ8CW

THE 1994 CQ WORLD-WIDE RTTY DX CONTEST - Trophy winners include: HH2PK, 9K2ZZ, RK9CWA, Z30M, K1NG, WU3V and DK3GI (There are more, but you'll have to wait until your issue arrives to see if you're there).

THE 1995 CQ WORLD-WIDE DX CONTEST - SSB portion will be held on October 28/29, and CW portion will be on November 25/26. See September CQ for complete rules.

AMONG THE NON-CONTEST FEATURES ARE...

... THE H DOUBLE BAY ANTENNA - by Paul Carr, N4PC. Another winning wire antenna from N4PC -- All you need besides a few components are a couple of tall trees.
PLUS...
... Lew McCoy, W1ICP's review of THE ICOM IC-Z1A DUAL-BAND HT - This is the one whose front panel detaches and turns into a speaker-mic complete with control panel.

September Column & Department topics are:

-- ANTENNAS & ACCESSORIES: BOOK NOOK - PART II - GOOD READING MATERIAL FOR THE ACTIVE AMATEUR, by Karl T. Thurber, Jr., W8FX
-- AWARDS: STORY OF THE MONTH - WAYNE BOLLSCHWEILER, WB7QID, by Norm Van Raay, WA3RTY
-- BILL'S BASICS: AMATEUR RADIO PUBLICATIONS, by Bill Welsh, W6DDB
-- CONTEST CALENDAR: ANNOUNCING CQ'S 1995 CONTEST SURVEY; plus CONTESTS FOR SEPT. &

EARLY OCT., by John Dorr, K1AR
-- DOUG'S DESK: THE MECHANICS OF COAXIAL TRAPS, by Doug DeMaw, W1FB
-- DX: CHILE'S OFF-SHORE ISLANDS, by Chod Harris, VP2ML
-- MATH'S NOTES: THE NEW 3.3 VOLT POWER SUPPLY STANDARD, by Irwin Math, WA2NDM
-- PACKET USER'S NOTEBOOK: BUILDING AND IMPLEMENTING A CONFERENCE NODE, by Buck Rogers, K4ABT
-- PROPAGATION: SUNSPOT CYCLE PLATEAU CONTINUES, DX CHARTS FOR SEPT. 15TH THROUGH OCT. 15TH, by George Jacobs, W3ASK
-- VHF PLUS: AMATEUR RADIO IN WAR-TORN BOSNIA, by Joe Lynch, N6CL
-- WASHINGTON READOUT: THE INTERNET AND AMATEUR RADIO, by Frederick O. Maia, W5YI
-- WORLD OF IDEAS: SPICING UP LIFE - RED-HOT RADIO RETURNS, by Dave Ingram, K4TWJ

The September issue of CQ - THE RADIO AMATEUR'S JOURNAL should be on newsstands and in subscribers' mailboxes by late August.

You may contact CQ Online at any of the following addresses:
AOL: CQMagazine@aol.com
COMPUSERVE: 72127.745@compuserve.com
GENIE: CQ@genie.geis.com

I would suggest that if your boss tells you to call or if you supervise the person you are contacting, then you're way out of bounds. But if its a friendly wake-up call because you suspect your co-worker and friend overslept or forgot to come in, then it is just the pizza case again where it is not in your own pecuniary interest, and so is okay with the FCC.

However make sure you do use phone patch even if the person you are calling is licensed. He can reply to you as third-party traffic but to do so directly over the air would violate 97.113 (a) (3) in respect of his own license but not yours :-)

But anyway, if it's not okay with the repeater group, then the matter is moot because that's their privilege to dictate their own rules.

>cause any signal degradation of my 70cm signal? Can I run a straight 2 meter

Yes, you can expect some degradation going through the bypass
relay and coaxial connectors. Relays used on 2 meters are often
marginal on 70 cm, particularly in cost competitive products. This
doesn't apply if high quality coaxial relays and N connectors are
used. Note that the problems is primarily due to impedance
discontinuities. A really clever engineer could probably design
a system using the inexpensive parts that still worked pretty good
on 70 cm, but I doubt this would happen by accident.

A more serious concern is the 70 cm signal turning on the amp
and making it oscillate, perhaps to destruction. I don't
recommend sweeping a high power amp outside its design range
unless you are prepared to replace the transistors/tubes.

Zack zlau@arrl.org.

Looking for 10 GHz FM/CW/SSB skeds
with FN22 or FN23 to get to 15 grids
from FN33KD/KE. Lots of LOS paths in
New England from a 3800 ft Mountain.

>
I have had a 212 for around 6 weeks and have had no complaints about it at all. It has a monster heatsink that I have not felt get more than warm when in the 45 watt mode. I have used it on packet with great results. I think ICOM has a mobile that is a touch less expensive, but the availability of the 212 was nice. To use it on many repeaters you have to open up the transmit to the full range (Instructions are in the manual) and the opened receive is nice. You cannot easily go out of band with transmit, yet, the mods keep coming out as we speak.

It will not let you save a not-in-band frequency to memory however. You can set the VFO, have a memory called up, and have your call freq all active (3 quick freq, and the VFO keeps the out-of-band freq if you like {RX only}). The audio is pretty goos, at least no one has complained. The IM isn't as good as the 202, probably due to the wider receive.

Yeah, and some people get their jollies by flaming folks who ask innocent
questions on the internet, trying to get information. How about leaving off
the profanity, too?

For info of the original poster, if you want a badge, you can get one
through mail order -- ads in QST and other ham mags.

Our local club, which is active in emergency comm work, uses another method
of ID, however. We bought some high-visability "vests" that go over our
clothing...has our club name and EMERGENCY COMMUNICATIONS on it.

Good luck and 73,

Really? Sounds like you WANTED to spend an additional $380. You
could have gotten on CW with the rig right out of the box with standard
configuration. Admittedly, filters, etc., do make it nicer, but those are
on the receiver, not the xmtr.

>for the low battery indicator to kick in (about 1.07 volt/cell)

You have a shorted cell in the battery. When you measure 6.9 V, this is only on 5 cells, so the actual voltage is 1.38 volts per cell, which is typical for a battery that is being charged/just been charged. If all 6 cells were good, the battery voltage would be approximately 8.4 V (1.4 V per cell) just after charging.

I'm assuming this is a typical HT plastic-encapsulated battery. Generally, there is no way to repair shorted cells from outside the battery. You need to open the case up (usually by cracking the glue at the seams) and get electrical access to the cells individually inside.

Since this pack is fairly new, it may be possible to "zap" the shorted cell and restore normal operation. Once the pack is open, test each cell individually until you find the one reading zero volts. It is *not* necessary to disconnect the connections inbetween the cells. "Zapping" is based on applying several 10s of amps of charge current for a fraction of a second. This will hopefully burn out the short inside the cell without burning out the internal connections in it. The result of over-zapping is generally an open cell.

Generally, charged capacitors (the big "computer grade" electrolytics, 50K uF at 20 V or so), and NiCd cells are recommended as sources for the zapping current. As an initial attempt, a well-charged D-cell NiCd connected directly to the shorted cell with heavy connections is relatively safe. I have also had good results using a 12V battery with a 6A *magnetic* circuit breaker in series as a timer. After each "zap", connect the slow charger to the pack and observe if the voltage of the previously shorted cell rises to 1-1.2 V. If it does, consider the zap successful and charge the pack for at least 15 hours.

It is also possible to under-zap, leaving a partial short. Should that happen, the cell will discharge by itself within a few days, and eventually become re-shorted. If it becomes shorted hard again, another zap may work

but you should start considering replacing the cell or the pack.

For about $10-$20, you can obtain an "insert" of new cells already taped and welded together to fit your pack. Once you have the pack open, it is quite simple to rebuild it by installing one of these, giving new performance for 1/4 to 1/2 of the new price. This is a lot less headache than trying to zap cells, and is definitely recommended if the pack is more than a year or two old. The newer cells often claim increased capacity over the ones supplied by the pack manufacturer as well.

Cell reversal occurs when one of the cells in the pack discharges completely, and current flow out of the pack causes it to "charge" with reverse polarity. This causes a short very quickly. Cell reversal is preventable by (1) never discharging the pack completely and (2) always charge enough that all cells reach full charge. Overcharging with the slow charger causes damage slowly, mostly due to heat buildup. This is much preferable to a pattern of undercharging will almost certainly cause one cell to reverse and a catastrophic failure from a short.

>talking out there rears?

97.113(a)(3) prohibits communication where the licensee has a pecuniary
interest, including commnications on behalf of an employer. This is
where calling in late to work is interpreted as being a no-no. You have
a pecuniary interest in going to work since they pay you - in addition,
if your employer wants to know if you will be late, such communications
would be on behalf, or in the interest of your employer.

The infamous "pizza" calls were previously interpreted as being illegal.
Now you can get away with it, I guess. But I don't believe the actual
rule was changed, just the interpretation (someone tell me if I am wrong
on that). But you should remember that the reason the interpretaion was
relaxed was to allow Amateurs to assist with logistics for public
service. It was not done to turn the Amateur service into an alternative
for another, more appropriate service, such as cellular.

97.103(a)(5) prohibits "Communications, on a regular basis,which could
reasonably be furnished alternitively through other radio services."
This is where one might be justified in saying that you should consider
GMRS or a cellular phone if you want to talk to the same person (like
your spuose) on the autopatch every night on your way home from work or
conduct "personal business" communications. Just a thought.

I did not spend a lot of time digging - but I found nothing in part 2, 90, 95 or 97 that prohibits the use of the word MAYDAY when sending distress traffic. You didn't say what service you were using - I'll assume it is part 90 (private land mobile radio).

The word is used to request help during an emergency where there is a direct threat to life or property - I would think that an overturned, burning race car fits the bill. All other stations are to give priority to a station in distress and should only transmit when aiding that distressed station. Normal communications would resume when the emergency is over.

Where did you read that MAYDAY was not appropriate for C.B.? I would not encourage you to or discourage you from using the procedure you described - you could use some other signal agreed upon by your associated users. If someone thinks that you are doing something wrong I would hope that can provide an paragraph in title 47 to back it up. Like I said, I didn't look that hard. Under part 90, emergency communications are covered in 90.407, and more generally for all services in 2.401 thru 2.407.

See "A VHF/UHF/Microwave Transverter IF Switch" By KH6CP in Aug 1988 QEX Magazine.

I have built several of them. They were designed for about 2 watts in, I think, but with CW/SSB short QSOs the attenuation resistors don't get too warm with 5 watts into it. I am using them with an HTX-100 as an IF rig. The circuit is simple but works great ... should be able to use it with any transceiver that can crank down to 5 watts.

Well, yes, the DSP would be nice, BUT AGC pumping will be a problem. The
IF filter from Yaesu will perform much better in the presence of strong
QRM nearby, it is in the AGC loop. Once you put the DSP unit on the audio
section, you are out of the AGC loop and with strong signals nearby the
DSP will not help much.

DSP in addition to the CW filter would be a wonderful dream.

3223. Charging Nicads?

Newsgroup: rec.radio.amateur.misc
Date: 1995-08-21 00:00:00 UTC
From: g-taylor4@tamu.edu
Message-ID: <41angp$8pj@news.tamu.edu>
Source record: 240056
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc

Have what I assume is a six cell nicad battery pack less than 4 months old and not used very often that only once or twice have I gotten to take full rated value of 1.2 volts/cell (7.2 volts). Typical behavior is to charge to about 1.15 volts per cell and won't take any more even after 12-14-16 hours. Anyhow, doesn't take long for the low battery indicator to kick in (about 1.07 volt/cell)

Is this the dreaded memory effect? Pulling out the files, articles I've found seem to indicate this is an overrated and unlikely phenomena in typical amateur use. Have seen some references to cell reversal....could this be whats going on? Have tried a combination of
deep and shallow discharge, per manual (10 hours) and longer charge times but situation continues.

Any suggestions besides spending bucks on a new battery pack.

Tnx....Greg, KD4HZ

From: stevie@boi.hp.com
Message-ID: <41a953$kpk@hpscit.sc.hp.com>
Source record: 240058

I have a swan-350 that has a bad rotary switch in the output stage.
The schematic lists it as S4F. I need to get the direct replacement
(no room to modify).

1) does someone have the address for swan so I can contact them directly?
They are still in business, I saw a ad for a new unit recently.

2) does someone have the MFG & P/N of the switch.

Any help would be greatly appriciated. Right now, I.m traped on 40 meters.
Not the worst think in the world, but I really would like to explore other
bands.
Thanks
Steve

Thank you all for the information. I'm leaning toward using a simplex frequency in the 147 MHz portion of the band. We don't have a lot of crowding locally in the simplex area so I don't think too many toes would be getting stepped on.

73,
Ken

From my understanding, it seems that the intent of the "Pizza Rule" is
to allow business-related communications, PROVIDED that the amateur
engaging in them is not part of the business involved. Sounds weird,
eh? It's probably best to simply avoid ANY business communications at
all....

>Heck, my boss would worry about me being hurt or something, if he didnt hear
>from me in a timely manner...what do you think? Is the club correct? Are they
>talking out there rears?

The club is right. If you were hurt, or involved in an accident, etc,
calling your work to report the accident and advise them of your
safety MIGHT be construed as a communication relating to your
immediate life or safety -- and thus be acceptable. That's your call.

Good amateur practice is to avoid overtly commercial proceedings on
the air. The only "business" we should conduct should be in support of
public service events, which was the original intent of the rule
change.

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 21/2330Z AUGUST 1995 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 21 AUGUST AND FORECAST FOR 22 AUGUST - 24 AUGUST

1A. SOLAR SUMMARY
Activity: Very low

Flares: None

Observed 10.7 cm flux/Equivalent Sunspot Number : 71/6

GOES satellite data for 20 Aug
Daily Proton Fluence >1 MeV: 1.8E+05
Daily Proton Fluence >10 MeV: 1.8E+04
Daily Electron Fluence >2 MeV: 2.2E+07 (normal)
X-ray background: A1.0
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
22 Aug 23 Aug 24 Aug
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 22 Aug: 70/5

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: Quiet to unsettled

Estimated Indices : A K Observed A Index 20 Aug
Learmonth 3 3211 0000
Fredericksburg 5 6
Planetary 5 6

Observed Kp for 20 Aug: 2221 2212
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
22 Aug 8 Quiet to unsettled
23 Aug 6 Quiet
24 Aug 6 Quiet

COMMENT: The expected geomagnetic disturbance did not eventuate.
Learmonth indices for 20 August:
Learmonth A K
6 3222 2102

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND
DATE LOW MIDDLE HIGH
21 Aug normal normal normal
PCA Event : None.

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
22 Aug normal normal normal
23 Aug normal normal normal
24 Aug normal normal normal

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Observed
DATE T index MUFs at Sydney
21 Aug 14 Near predicted monthly values with spread F 11-14 UT.

Predicted Monthly T index for August: 15

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T index MUFs
22 Aug 10 Near predicted monthly values
23 Aug 10 Near predicted monthly values
24 Aug 10 Near predicted monthly values

COMMENT:
Darwin MUFs: Mostly near predicted monthly values; depressed 15-30%
02-06 UT. Spread F observed 13-17 UT.
Townsville MUFs: Near predicted monthly values.
Hobart MUFs: Near predicted monthly values with sporadic observed 09 UT.
Sporadic E obscured the F region at 17 UT.

What recommendation do you have for a cordless telephone with a
headset? I know Radio Shack has one, but I am dubious of the quality.
Hello Direct has a 900MHz cordless phone with the solo (in the ear)
that I'd love to get, but it's _only_ $489. :-) I think South
Atlantic Bell offered something in this area, and maybe there are others
out there, too.
Have you used any of these? What do you think of their performance?
Is there something out there of good quality and a reasonable price?

Thanks John, will keep that in mind. I've received an email message about this, that basically states the same thing, (better antenna). The one I presently use is a comet dualie, with the average gain. What Im fighting is overeager repeater ops who insist on cranking out 7 million watts from 2000 feet (of course I exagerate, wait'll you hear my fishing stories!) and are basically alligator repeaters, all mouth and no ears. You can hear a repeater from Baton Rouge in Houston, but cant hit it from Lafayette!

3235. New Mac Ham Test Simulators

Newsgroup: rec.radio.amateur.misc
Date: 1995-08-21 00:00:00 UTC
From: john@wd1v.mv.com
Message-ID: <john-2108950533360001@wd1v.mv.com>
Source record: 240158

The new Macintosh Ham Test Simulators are HERE!

Novice Ham Test 5.0 SA.sea
Technician Ham Test 5.0 SA.sea
General Ham Test 5.0 SA.sea
Advanced Ham Test 5.0 SA.sea
Extra Ham Test 5.0 SA.sea

The latest versions feature:

HyperCard 2.3 as a stand-alone application (SA) eliminating
the need to have HyperCard. All you need is a Mac with 4
Meg of memory and version System 7 or greater.

Each version 5 Ham Test Simulator has the latest questions
as prepared by the Question Pool Committee.

Each Ham Test Simulator is FREE OF CHARGE and work the
same way as the originals written by Diana, KC1SP.

You may obtain a Ham Test Simulator by mailing me a *FORMATTED
disk (1 per test) and include a Self Addressed and Stamped disk
mailer for the return.

Each Ham Test Simulator is also bundled with a shareware CW
program called MacMorse 1.4 written by Doug, WB0EON.

Also included are a collection of text files that relate an
interesting variety of ideas about the best way to study CW and
prepare for tests.

or warm your phone line and get just the tests:

America On Line - Macintosh Ham Radio Section

ftp://oak.oakland.edu//pub3/hamradio/mac/theory-and-morse/AdvancedHamTest1.sea.bin
ftp://oak.oakland.edu//pub3/hamradio/mac/theory-and-morse/ExtraHamTest.sea.bin
ftp://oak.oakland.edu//pub3/hamradio/mac/theory-and-morse/GeneralHamTest.sea.bin
ftp://oak.oakland.edu//pub3/hamradio/mac/theory-and-morse/NoviceHamTest.sea.bin
ftp://oak.oakland.edu//pub3/hamradio/mac/theory-and-morse/TechnicianHamTest.sea.bin

Your comments and suggestions for future versions are always
welcome. Stay in touch and good luck with your next test!

>anything like this, I would appreciate your input.

Tony,

A good transverter in combination with the 850 will beat any VHF
multimode hands down, and they have become popular with contesters,
EME ers and the like. Many converters are homebrew though. I recomend
trying to get hold of the "VHF DX Book" by Ian, G3SEK.

>CW transmitters, he he!

Brian,

You've got your atributation botched. But it's trivially easy to go
back and get the original. Let me help your memory. The question
about "how many broadcasters" was your question, not mine. I just
offered an answer. I didn't invent the question.

>RA>I've lost the >CM>> attrib. Apologies to all. >CM> is Brian C.

>RA>brian.carling@acenet.com (Brian Carling) writes:

>RA>>CM>>An FM transmitter is much more complex. A basic CW transmitter is just
>RA>>CM>>oscilator set to the desired freqeuncy and hooked up to a switch.

>RA>>CM>And an FM transmitter is just an oscillator hooked up to a microphone.
>RA>>CM>I built one 40 years ago. Single tube oscillator and a carbon mike.

>RA>>Oh sure! How many FM VHF broadcast stations in the U.S. are using this
>RA>>technique with a carbon mike?

These two lines are the center of Brian's error. They are HIS speech, not
mine. I don't know whether this was deliberate or an error, so I'm
going to be charitable and presume the latter. After all, Brian has
made so many errors in this group, we can't be surprised at another.

>RA>About as many as there are HF broadcasters using an oscilator [sic]
>RA>hooked up to a switch :).

And the above two lines are my answer. Now, here's the base post (in
it's complete form, headers and all) that Brian made, and that I was
responding to:

>> looked over a bit more than you may have been before.

I flew last week from Seattle to Portland and back. Security was very tight at Portland. They were snatching away unattended bags; a german shepard and police officer were stationed at bag checkin.

I had in my carry on bag: ICOM HT, cellular phone, notebook PC, extra batteries for each of these, flashlight, telephone modular jack connector cable for modem, etc. They did not search my bag at either end nor ask me any questions.

They didn't ask me to demonstrate that my alpha pager was working (that's been done before); they didn't ask if my HT was a cel phone (that's happened); they didn't care at all!

>NONSENSE! What pure _B_ _S_!

Are you accusing me of not telling the truth? My IC-745 came without
the two CW filters. The CW selection position will not work without
them 'cause there's no audio output. Please email me where the NONSENSE
and _B_ _S_ exists.

>Cecil, there are plenty of amateurs on QRP using simple one and two
>transistor rigs, some home brew, some kits. I mean THOUSANDS!

There are thousands of hams using single transistor oscillators for
transmitters? If that were true, there should be a lot of chirps out
there. Maybe we could set up a charity for those poor guys so they
could at least add a final amplifier. It reminds me of the tale of
starving people in third-world countries who can only afford CW rigs.

>BTW - if you are paying $300 for CW filters for an ICOM, you got taken!

That's list price at HRO. One cost $180, the other cost $90, and the
keyer cost $80 - chrome plated.

>CM>Actually, a carbon mike is a much simpler device than the average
>CM>commercial Morse key. You can make one out of pencil lead.

>Again, pure B.S.

OK, I challenge you to prove that my statements are false or else
meet me in downtown Queen Creek at high noon. :-)

>OK, and RTTY is also considered SSTV.

Sending a digital code by varying the amplitude of a 10W carrier between
very near 0 and 10W is indeed amplitude modulation; in fact, it is
exactly like amplitude modulating the carrier with a baseband
digital signal filtered to remove the upper harmonics.

Brian, you may wish to refer to Part 97.3(c) and Part 2.201 regarding
the FCC definition of "CW"; hint: they say it is a carrier amplitude
modulated with a single channel of quantized or digital data, intended
for reception by ear or machine. In other words, "CW" is indeed AM.

Message-ID: <419ri4$2r6@usenet.INS.CWRU.Edu>
Source record: 240169

Read in Sept 95 QST mag about morse code readers. You can hook these up to your rig and visually copy the code from the receiver as it is heard. Presumably the units (they have 2 models) have led or lcd displays where you can read the code as it comes in. It also can be used for code practice.
Anyone has any more info on these things? They cost between $149 and $179. Before spending money like this I like to know your experience. We are working on upgrading to General and 13 wpm is tough. Thought this device would help and be handy for the future.
Thanks for the help.

Reading the ad in QST would lead one to believe that the radio has two
independent receivers, each with its own S-meter. But, I think you're
right in that all it is is two VFO's, each with its own knob; sort of
like the old TS940 without VFO-2 knob. I also agree that the MP appears
to be an upgrade to the FT-990. Some quick checking with HRO indicates
that the price will be under $3K......Ron, W4VR.

3250. Mobile Antenna question

Newsgroup: rec.radio.amateur.misc
Date: 1995-08-21 00:00:00 UTC
From: FryPan <ke4hor@one.net>
Message-ID: <41a19j$ehf@mail.one.net>
Source record: 240173

I just purchased a gain antenna for my car with a trunk-lid mount. After mounting, I find that the antenna is about 20 degrees off vertical. SWR is perfect, but I would like to know what effect that might have on the transmitted and received signals. Thanks for any info.

3251. Autopatch Legality Query??

Newsgroup: rec.radio.amateur.misc
Date: 1995-08-21 00:00:00 UTC
From: cgreenha@magnus.acs.ohio-state.edu
Message-ID: <41a2at$beg@charm.magnus.acs.ohio-state.edu>
Source record: 240174

Perhaps you can shed some light on this matter. Recently, our local repeater club sent out guidlines on what you can, and cant use the patch for. They placed the guidlines into 4 catagories, and they are; 1) legal...you may use it. 2)legal...but you could have waited. 3)legal...but this is something we would have not wanted to listen to. And 4) Not legal.

Besides getting into the issue about "Wether a club has the right to tell us how to talk and use equipment" (which this club has done in the past)...I have a specific question.

One of the exmples they gave as "legal...but this is something we would have not wanted to listen to." was to order a pizza over the patch. Another example was listed as "Not legal", and it was calling work to say that you are going to be late. As a matter of fact, they also claim that a HAM that even calls another at home, to call into work for him, is in violation of FCC law as well.

My question is this: How can a call to a business over the patch that results in monetary gain for both parties (pizza call), be considered legal...and a call to your work to say that that you will be late (where no one is being financially compensated) be called "not legal"?

Heck, my boss would worry about me being hurt or something, if he didnt hear from me in a timely manner...what do you think? Is the club correct? Are they talking out there rears?

>
I disagree - you could very easily build into the unit an attenuator pad
to bring 10 watts down to, say, a few hundred milliwatts. Ten-Tec's 6m
xverter does this and thus runs directly off the RF output of the rig.

I am sure you could get the 850 down to 5 or 10 watts out, thus this would
be quite an attainable goal.

From: gerheim@sonalysts.com
Message-ID: <41aaa1$epr@hatch.sonalysts.com>
Source record: 240181

In the latest issue of QST, they mentioned automatic operation
on HF. It has apparently just been approved by the FCC. This
apparently allows any station to use HF Packet with no control
operator present in very small sub-bands. This will allow you
to receive mail from friends via HF while you are out. Almost
as good as email! ...but more fun!

Where are the sub-bands? What are the rules?
Please post your answer as it may be of general interest.

>Lewis Stephens KC5PSX

I got a 250 hz filter for my ICOM, and it makes a big difference. I have
to use headphones at night, and the noise is brutal. The CW filter cuts
out much of it, and keeps nearby stations from interfering with your QSO.
Don't know what difference to expect between 250 hz and 500 hz filters.
A friends Ten-Tec rig has a 200 hz filter, and it's great.

Lewis,
I have used my dads' 840 and the CW bandwidth is HUGE. I have been using a TT with 150hz filter
and it is a dream. I would look into a DSP, as it will be a godsend on 40. Killing heterodynes,
narrow audio bandpass, and some noise reduction, it should make the whole trip better. Also, a
DSP-9 should be cheaper than the yaesu filter.

>Before spending money like this I like to know your experience. We are
>working on upgrading to General and 13 wpm is tough. Thought this device
>would help and be handy for the future.

Alas, most of the code readers offered to amateurs are a pretty sad lot. You need a nice strong interference free signal sent with proper spacing and weighting for these units to be nearly error free. (Much better performance is possible, but doesn't seem to be widely implemented because of lack of demand (most Morse users are traditionalists), and because other encodings work so much better in noise and interference than OOK Morse that modem designers have concentrated their energies on those encodings.)

At this stage of the game, you're trying to improve your manual Morse performance, so you should concentrate on doing that rather than playing with a code reader. Copy W1AW, listen to tapes, use drill software, and get on the air if you can. Those will all be more helpful now. However, if you have a Soundblaster, there's a program for it that does a better than average job of decoding Morse signals, look for something called FFTMorse on the usual ftp sites.

If you want to buy some hardware, get a DSP filter. That'll do you more good than a code reader in getting your manual decoding skills up. Machine digital is wonderful, and much better than OOK Morse at working under harsh conditions, but a good bit of the reason for that is the different encoding methods used. Get a machine if you like, but get one for a better encoding, such as PACTOR, GTOR, or Clover. Don't bother getting one for OOK Morse. It won't do you any good in increasing your manual skills.

To do that you have to condition your own wetware to emulate a modem, and that can only be done by repetition. Neural pathways are burned in by repeated firing, so to establish the wetware modem pathways, you have to drill, drill, drill. There's no shortcut. Don't worry about speed plateaus, everybody goes through those, some worse than others. That's just the brain trying to defend itself. Just keep pounding, you'll break through eventually. Look on the bright side,

however, the more you pound your head against the wall, the better it will feel when you finally stop. The brain damage does fade with time even if it won't ever totally go away.

In practical terms it doesn't mean a lot. The canted antenna will
have a skewed pattern, but by mounting it somewhere other than the
center of the top of the vehicle, you've skewed the pattern anyway.
A bit more won't make much difference. If it bothers you, just bend
the whip upright. That won't make much difference to performance
either. In fact, according to some work by Landstorfer and Sacher,
an optimum vertical isn't a straight line.

Newark stocks them. Any distributor who carries racks will have the
shelves, and most large distributors do carry racks by Bud or one of
the other rackmakers.

Is the 826 a mercury rectifier?

If so, there's a solid state plug-in replacement available. Alternatively, you can use a hi-volt recitfier module (try Silicon Alley) but be advised that the mercury rectifier tubes caused a significant voltage drop, so B+ may be too high with either "fix."

You may be able to resurrect the nonfunctional 826 by letting it sit right-side up in the chassis for a day, and then slowly bringing up the filament voltage with a variac. Be sure not to apply HV. Give it a couple hours to warm up, then bring the HV up on a second variac. YMMV, but sometimes it works.

Since the 1940s we've forgotten how to care for mercury rectifier tubes.

We've also mostly forgotten (or never experienced) the joy of sitting in a darkened ham shack with the lid off the power supply, using a big plate-modulated AM rig and watching the rectifiers and the PA plates flash and flicker. It's nearly as ggod as the Northern Lights.

Don't have the number on the tip of my tongue, but they are in Ft. Pierce, FL. Information will have the number. The IRCI filters are very good, but like the man said, they may not be much help once they get your $$.

And all the points made about investing in good IF filtering before plunking down for the DSP unit are pretty much right on the mark.

From: Simon Twigger <simont@post.its.mcw.edu>
Message-ID: <41d4v9$g1a@post.its.mcw.edu>
Source record: 239992

Hi there,

I am considering purchasing a 2m/70cm mobile rig for my car, which
is a Honda Civic. Having had a careful look inside the car, the
number of places to mount a rig are somewhat limited. I was wondering
if anyone else out there had sucessfully installed a mobile in a
honda civic and could perhaps tell me where they put it!
I suspect my best option would be to buy a rig with a removable
front and then mount that on/under the dash and install the main
part of the rig elsewhere in the car. This would make sense from a
security point of view also.

Any other advice regarding installing mobile rigs would be most
appreciated.

Thanks!

> able to match, or nearly match, the rest.

I do enjoy the small Icom monobanders and their use certainly simplifies the shack in allowing rapid band switching without transfering cables from exciters to transverters. They even stack neatly. I have nearly all of them, 575H, 275H, 475H and 1275A. There is or was a 375H or A, but in the UK be don't get to use the 220 MHz band.

These are fun and cute and easy to operate and for FM users they offer the tones and shifts that are called for. But there are limitations and also problems. The rigs lack useful features found in most HF rigs (e.g. vox and zero rit) and if one has an interest in c.w. [no, not you Gary!], the expense of equiping them all with the added filters (plus the pain - the filters need to be soldered to boards which are less than a breeze to remove) means that they are far from the perfect solution. Perhaps the arrival of outboard audio DSP which can be transferred with one's headphones has levelled that one difference somewhat recently.

I'm pretty pleased with the units, but for serious weak signal c.w. work I admit that I very much prefer to operate my IC-765 plus a transverter. It's so much nicer to handle and tune, with its large controls and indicators and with filtering facilities which are in quite a different class altogether.

SB QST ARL ARLB083
ARLB083 SM election results

Ballots have been counted for Section Manager elections in South Texas, West Virginia and Western Washington. Terms of office begin October 1, 1995. The results are as follows.

In South Texas

W.H. (Bill) Clarke, WB5YDD, 378
Alan W. Cross, WA5UZB, 766
Cross was declared elected

In West Virginia

Richard V. Bumgardner, KV8S, 184
Oliver N. (Olie) Rinehart, WD8V, 245
Rinehart was declared elected

In Western Washington

Michael W. Dinkelman, WA7UVJ, 640
Harry W. Lewis, W7JWJ, 971
Lewis was declared elected

Five other Section Manager positions were not contested. The following were declared elected.

In Colorado
Tim C. Armagost, WB0TUB

In Eastern Washington
Kyle Pugh, KA7CSP

In Georgia
Dorothy ''Dot'' W. Fennell, KA4HHE

In Los Angeles
Phineas J. Icenbice, Jr., W6BF

In Sacramento Valley
Jettie B. Hill, W6RFF

There's an ad for an outfit that makes nice-looking Ham Radio badges on Page
174 of the August QST.

>

There are a couple of things you can do. One is to get a book published by ARRL that will help you understand the concepts. I believe ARRL changed the name of the book about a year ago, but it was called "Now You're Talking!". Maybe someone else can clarify this. Most ham radio stores carry it.

If you already have a technical background, you can simply go to Radio Shack and buy the question pool book for Novice and Technician tests.

Then ask around your area, and find out where the next testing session is. You need to pass the Novice and Technician written tests. Once you've done this, the FCC will issue you a "no-code technician" license, and you can get on the air with an HT, and make more radio friends.

Then you should start studying code. I used a free program called "super morse". It's excellent. Hams everywhere have it; you just have to ask around for it. Or ask in the group here. Once you pass your 5 word-per-minute (WPM) test, you can get on the air on certain HF frequencies.

There are 5 levels of ham radio license, with Extra class being at the top. Once you've attained Extra, you can use all parts of all ham bands.

Ham radio is very diversified in its interests. You can send electronic mail (packet radio), get involved with weather spotting, traffic (message) handling, hunt for hidden transmitters, use satellites, and more.

I subscribe to 3 magazines: WorldRadio, CQ, and QST. They're all good, and very different from each other.

Hope this helps. Send me a personal note if you want.

>a dsp a little later.

If you want an excellent low cost alternative to the Timewave unit, see if
you can still find the little Radio Shack DSP which was on sale for
49.95 last time I looked...
This is truly a bargain, and works VERY WELL on CW. I use the RS DSP
in conjunction with 500hz filter and passband tuning on my TS-850, and
can split hairs (better than 100hz) in cw contests.
Don't let anyone tell you the Radio Shack unit isn't worth the 50 dollars;
it won't digitally filter line noise, etc, but does a great job on CW and
UNwanted carriers, too.
Good Luck, John

Having a problem finding mods for you Scanner or Ham radio. Then just send me e-mail at BucherJ@aol.com with the Make and Model of the item you are looking for and I will send back what type of modifications we have for that item. If you decided that you need this mod then all I ask for is a small fee of $5 to cover my cost of posting these messages on-line and sending them back out. We can do this either threw the mail, fax, or via email. I have many mods that are not listed here so just ask if you don't see your radio listed below.

Note: These mods are furnished for informational purposes only, any changes that you make to your equipment may void the warranty and be illegal.

There is something out there called "AM MAX". Seems to me Sony has some current products. Have heard from some professional broadcast folks that the sound quality is superb.

There were some guys over on the Broadcast Professionals Forum on CompuServe talking about it a while back. Maybe Prodigy has a similar interest group.

> questions on the internet, trying to get information.

I wasn't getting my jollies, but upon re-reading my post I can see that
perhaps I was just a little too harsh.

My reason for not liking or condoning brass badges that look like police/
security badges is for the potential abuse factor. We all know there are
people who, given the opportunity, will try to take advantage of their
perceived authority. As soon as the public sees a badge, they think the
person flashing the badge is some sort of police official. I can see
having such a tool available to this kind of person as only helping them
in their quest to deceive.

I have no problem with the plastic pin on ID/Name badges that clubs issue.
These don't have the same potential for abuse that a police look-alike
badge has.

> How about leaving off the profanity, too?

Oh come one... attack *what* I say, not how I say it. The "profanity"
I used wouldn't make many grandmother's faces turn red and I suppose that
is a pretty good guage.

I have had a 757GXII for the past 6-7 years (don't recall), and it will change frequency during transmit if there is a lot of RF floating around the shack (like using an end fed wire w/o a ground....). That seems to drive the microprocessor nuts - particularly on 10 meters.

>variable state.

Actually, the amplitude has more than two states since the transition
from 1 to 0 (and vice versa) must be shaped to limit the maximum
modulating frequency. The ARRL Handbook actually mentions raised
cosine shaping (!) as being optimum, but most radios seem to have
something similar, though not the same.

>The circuit is simple but works great ... should be able to use it with
>any transceiver that can crank down to 5 watts.

There are some potential problems with this method, aside from the
obvious of forgetting to turn down the HF rig's power before transmitting.
Many HF PAs aren't so linear at low power settings, and their efficiency
often drops sharply as well. Amplifier noise becomes a greater percentage
of the output signal at low power levels as well since it typically does
not "turn down" in proportion to the decrease in signal output.

Now decreased amplifier efficiency can be dismissed as of no consequence,
but the other problems may make an alternate approach better. Simply
run the HF rig at normal power settings into a dummy load while tapping
the line with a 40 db coupler. That'll give you a 10 mW signal for a
100 watt HF signal, a pretty near perfect match between the design values
for typical HF rigs and typical transverters. It wastes some electricity,
but it should result in a cleaner signal.

Obviously, this method is easiest to implement if the transverter's
IF in/out are separate, and if the HF rig has a separate receive
antenna input. I never liked the idea of exposing the receive converter
in the transverter to a blip of HF power, so splitting the IF paths is
the preferred way to hook to a transverter anyway.

I have a Rabbit TV transmitter which I plan on using for ATV. When I opened up the housing to put a BNC connector on it I noticed screening on the board for a transistor in the RF output area with no transistor there. Does anybody know if the Rabbits were designed for higher power applications and they maybe just left the transistor off for unlicensed operation in the US? Can a transistor stage be added to bump up the power? If so which transistor and do any other components need to be added? I would like to drive an external linear but need an extra 10 db or so to drive the linear to full power.

> different license classes that require it ? There has been lots of talk
> on the net about this recently. What is the OFFICIAL response from the
> ARRL ?
>
I don't profess to speak for the ARRL, but I do know that the last time
they made a statement on this subject they were opposed to eliminating CW.
They claimed to have done a survey of their membership and found that
there was a strong sentiment to leave things as they were. When the
no-code tech proposal was still under consideration, they wanted to
require that no-coders be limited to frequencies above 220 MHz (in other
words, NO 2 meters) and that they be given call signs from the Nx#xxx
block which would have identified them as no-coders. Obviously that
isn't what the FCC did, however.

Since that time there has been no formal proposal to the FCC, just a bunch
of talk on the Net and in the magazines, so there has been no need for
them to take a position. And, politicians that they are, they WON'T take
a position until they're forced to do so.

MU>In article <4190dd$epf@nntp.crl.com>, hartman@crl.com (Jeffrey Hartman)
MU>writes:
MU>>Can anyone offer some constructive criticism or compliments regarding the
MU>>Radio Shack HTX-212? Also, is this radio modifiable? I understand that
MU>>it can RX up to 174 with a key-pad combination but can it be alter to TX
MU>>as well up to that range?

please COMPLETELY IGNORE my last response. i'm so used to hearing
requests for mod information for the htx-202 that i didn't notice it was
the 212 you were asking about. again, please ignore my inability to
read a post carefully.

greg

3292. This week in Amateur Radio should report about...

What does typewriter maker problems and world-wide cpu shipments have to do with Amateur radio?

Next we'll hear a report about shoe lace shortages and how it affects our walk to the ham shack.

73

Rick

3293. Comments Tandy HTX-212 2m

Subject: Comments Tandy HTX-212 2m

The HTX-212 Mobile Transceiver..

True FM transmit for superior audio and excellent performance on packet
30 memory channels
Priority channel selection
One call channel
Store up to six 15-number touch-tone sequences for DTMF paging or auto-patch
Microphone, external speaker and antenna jacks
On-microphone DTMF keypad
Multifunction scanning
Dual VFOs for semi-duplex operation
Frequency step selectable
Built-in subaudible tone encoder and decoder
Output power 45 watts(high) 10 watts (low)
$349.99

Frequency range (Factory)

Transmit.....144.600-148.000 MHz
Receive.....136.000-174.000 MHz

Can be modified to transmit in the MARS/CAP band. (Directions included)

A solid unit - but a little pricey.

Clint Bradford

[[EXAMNT8.22 : 3382 in EXAMNT8.22]]

AMATEUR RADIO EXAMINATION OPPORTUNITIES

****

Want to find out what if your new FCC license has been granted?
Has it been 7 to 10 days since you took you examination?

If so, Call ARRL at 1-800-326-3942 (8 am to 4 pm weekdays, eastern time)
to find out -- or call the FCC at 1-800-322-1117 during business hours.

Your hardcopy (printed) license would follow shortly after the license
grant is indicated in the FCC Amateur Service data base.

If your test was coordinated through the ARRL/VEC, license turnaround
time will be approximately 7-15 days. This includes 1-5 days for the
VE team to complete their processing (the team has up to 10 days before
they must mail the results), 3-5 days between the VE team and the VEC;
2 business days at the VEC (in some cases only 1 day); and 1-3 business
days at the FCC. Allow 5 business days from the date that the VE team
estimates the test session results will reach the VEC.

If your license has not been granted within three weeks, and your test
was coordinated through the ARRL/VEC, call the ARRL/VEC at 203-594-0200.

****

The following test session information is provided by the
ARRL/VEC for the upcoming eight to twelve week period. For
further information, please contact the test session CONTACT
PERSON at the telephone number provided. If necessary, you
may contact the ARRL/VEC at 203-594-0200 x0282 for additional
information. Electronic mail may be forwarded to the ARRL/VEC
via USENET at "bjahnke@arrl.org" or via MCI Mail to
MCI ID: 653-2312 or 215-5052.

Although the test session information presented here does
not indicate whether walk-ins are accepted or not, most test
sessions do allow walk-ins. We encourage you, however, to
always contact the CONTACT PERSON at the telephone number
provided so that the VE Team is aware that you be attending
the test session.

NEED AN FCC FORM 610?

The ARRL/VEC can supply you with your needed Forms 610, whether they be for the Reciprocal Permit for Alien Amateur Licensee, Form 610-A; Club/Military-Recreation/RACES station, Form 610-B; or Form 610 for Amateur Operator/Primary Station License. FCC Form 610-R is a computer generated renewal form that will be sent from the FCC (beginning September 1995) to licensees whose license is to expire within 90 days. Form 610-V is the special application for persons seeking a Vanity call sign (as of August 11, 1995, that form is not available -- send the ARRL/VEC an SASE if you would like us to supply you with the form once it becomes available).

Several FCC forms, including Form 610, are available through the FCC's fax-on-demand service by calling 202-418-0177 (request form "000610").

STILL NEED TO PREPARE FOR YOUR EXAM?

If you would like information on how to become licensed; or how to locate Amateur Radio clubs, instructors, licensing classes and/or Novice examiners in your area; please contact the ARRL Educational Activities Department (EAD) at 203-594-0200 x0219. The EAD can also provide information on recommended study materials. Electronic mail may be forwarded to the ARRL EAD via USENET at "rwhite@arrl.org" or via MCI Mail to MCI ID: 215-5052.

EXAM LISTINGS - DEFINITION OF FIELDS

STATE
Test Date,VEC,City,,Contact Phone,Contact Person

The SECOND field in the following listing specifies the VEC which is coordinating this examination. This single-character designator denotes the VEC as defined below. An "A" (for example) indicates that this examination is coordinated by the ARRL/VEC.

For further information on any examinations listed, or if you do not find any examinations listed for your area, you may contact any of the coordinating VECs below.

A = ARRL/VEC, 225 Main St, Newington, CT 06111; (d) 203-594-0300
The 1995 test fee is $5.90.

X = Anchorage ARC, 2628 Turnagain Parkway, Anchorage, AK 99517;
(d) 907-786-8121, (n) 907-243-2221 (or) 907-276-5121
(or) 907-274-5546

C = Central Alabama VEC, 1215 Dale Dr SE, Huntsville, AL 35801;
205-536-3904

N = Charlotte VEC - HAS TERMINATED OPERATIONS

D = Great Lakes ARC VEC Inc. - STATUS UNKNOWN

E = Golden Empire ARS, PO Box 508, Chico, CA 95927; No phone.

G = Greater Los Angeles ARG, 9737 Noble Ave, Sepulveda, CA 91343;
818-892-2068, 805-822-1473.

J = Jefferson ARC, PO Box 24368, New Orleans, LA 70184-4368;
504-737-2315.

K = Koolau ARC, 45-529 Nakuluai St, Kaneohe, HI 96744;
808-235-4132

L = Laurel ARC Inc., PO Box 3039, Laurel, MD 20709-0039;

[[EXAMNT8.22W : 3381 in EXAMNT8.22W]]

AMATEUR RADIO EXAMINATION OPPORTUNITIES

****

Want to find out what if your new FCC license has been granted?
Has it been 7 to 10 days since you took you examination?

If so, Call ARRL at 1-800-326-3942 (8 am to 4 pm weekdays, eastern time)
to find out -- or call the FCC at 1-800-322-1117 during business hours.

Your hardcopy (printed) license would follow shortly after the license
grant is indicated in the FCC Amateur Service data base.

If your test was coordinated through the ARRL/VEC, license turnaround
time will be approximately 7-15 days. This includes 1-5 days for the
VE team to complete their processing (the team has up to 10 days before
they must mail the results), 3-5 days between the VE team and the VEC;
2 business days at the VEC (in some cases only 1 day); and 1-3 business
days at the FCC. Allow 5 business days from the date that the VE team
estimates the test session results will reach the VEC.

If your license has not been granted within three weeks, and your test
was coordinated through the ARRL/VEC, call the ARRL/VEC at 203-594-0200.

****

The following test session information is provided by the
ARRL/VEC for the upcoming eight to twelve week period. For
further information, please contact the test session CONTACT
PERSON at the telephone number provided. If necessary, you
may contact the ARRL/VEC at 203-594-0200 x0282 for additional
information. Electronic mail may be forwarded to the ARRL/VEC
via USENET at "bjahnke@arrl.org" or via MCI Mail to
MCI ID: 653-2312 or 215-5052.

Although the test session information presented here does
not indicate whether walk-ins are accepted or not, most test
sessions do allow walk-ins. We encourage you, however, to
always contact the CONTACT PERSON at the telephone number
provided so that the VE Team is aware that you be attending
the test session.

NEED AN FCC FORM 610?

The ARRL/VEC can supply you with your needed Forms 610, whether they be for the Reciprocal Permit for Alien Amateur Licensee, Form 610-A; Club/Military-Recreation/RACES station, Form 610-B; or Form 610 for Amateur Operator/Primary Station License. FCC Form 610-R is a computer generated renewal form that will be sent from the FCC (beginning September 1995) to licensees whose license is to expire within 90 days. Form 610-V is the special application for persons seeking a Vanity call sign (as of August 11, 1995, that form is not available -- send the ARRL/VEC an SASE if you would like us to supply you with the form once it becomes available).

Several FCC forms, including Form 610, are available through the FCC's fax-on-demand service by calling 202-418-0177 (request form "000610").

STILL NEED TO PREPARE FOR YOUR EXAM?

If you would like information on how to become licensed; or how to locate Amateur Radio clubs, instructors, licensing classes and/or Novice examiners in your area; please contact the ARRL Educational Activities Department (EAD) at 203-594-0200 x0219. The EAD can also provide information on recommended study materials. Electronic mail may be forwarded to the ARRL EAD via USENET at "rwhite@arrl.org" or via MCI Mail to MCI ID: 215-5052.

EXAM LISTINGS - DEFINITION OF FIELDS

STATE
Test Date,VEC,City,,Contact Phone,Contact Person

The SECOND field in the following listing specifies the VEC which is coordinating this examination. This single-character designator denotes the VEC as defined below. An "A" (for example) indicates that this examination is coordinated by the ARRL/VEC.

For further information on any examinations listed, or if you do not find any examinations listed for your area, you may contact any of the coordinating VECs below.

A = ARRL/VEC, 225 Main St, Newington, CT 06111; (d) 203-594-0300
The 1995 test fee is $5.90.

X = Anchorage ARC, 2628 Turnagain Parkway, Anchorage, AK 99517;

3297. Re: VOX headset

Newsgroup: rec.radio.amateur.misc
Date: 1995-08-22 00:00:00 UTC
From: towen@freenet.vcu.edu
Message-ID: <41e7lk$81j@freenet.vcu.edu>
Source record: 240020

I concur that the Radio Shack headset sounds great although I use the Push-to-talk feature and not the VOX feature. The earpad could stand to have a little more padding, but overall the $49.95 price is very competitive. I've had mine for about four weeks and use it continually.

I'll back-up what Ken said. I'd highly recommend against a brass badge
for identification purposes, especially around emergency scenes. I'd
recommend some other sort of identification, such as a photo-id card
that you can clip on your lapel, or a hat/helmet/jacket with lettering, etc.
Not only are such items more visible, they'll lead to less confusion.

In any case, if someone can't be talked out of getting a badge, please
check the legality in the locality you're in. Additionally, and
perhaps, more importantly, don't abuse it by trying to get into
emergency/restricted areas without the appropriate permission.

I spent 8 years on a local government disaster response team, so I do
have some experience with emergency/restricted-access areas, and one
of the things that caused us grief was people abusing their credentials
to enter an area they were not authorized for (There's a local TV
reporter that came awfully close to spending the night in jail
due to bluffing his way through the security perimeter with false
credentials a few years ago). While the laws may vary from location
to location, most areas have fairly stiff penalities for the
unauthorized entering of restricted areas (No, I can't quote the
specific KRS (Kentucky Revised Statute) off the top of my head any

3299. NECGraph-Windows DEMO Available

Newsgroup: rec.radio.amateur.misc
Date: 1995-08-22 00:00:00 UTC
From: nx7u@primenet.com
Message-ID: <nx7u.70.004B74DD@primenet.com>
Source record: 240067
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.misc,sci.physics.electromag

PRODUCT ANNOUNCEMENT: NECGraph-Windows (by Scott Townley, NX7U)

==========
DEMO VERSION NOW AVAILABLE: A demo version of NECGraph-Windows should be
available on the NEC archives (ftp.netcom.com in /pub/ra/rander/NEC; or
ftp.emclab.ee.umr.edu
in /pub/aces/NEC) within the next few days. The demo is called NG_DEMO.ZIP and it
illustrates
the available graphical outputs of NECGraph-Windows.
==========

WHAT IS NECGRAPH-WINDOWS?

NECGraph-Windows is a Windows-based program for producing publication-quality graphical output from your NEC (Numerical Electromagnetics Code) program.

NECGraph was originally written for my own personal use after having suffered through many years of hand-plotting tables of text or importing hand-modified output files into popular spreadsheets with almost no true scientific graphics capabilities.

NECGraph *isn't* NEC bundled into the Windows environment. You will need to use your own NEC executable to generate the output files that NECGraph utilizes. This approach does have advantages: (1) You can continue to use your customized/modified NEC sources and executables, (2) You don't need to spend money on an executable that you may already have or
can download for free, and (3) I can spend all my time on the graphical aspects of the program.

WHAT DOES NECGRAPH-WINDOWS DO?

NECGraph will automatically parse the text-based output files from all openly-available versions
of NEC (including NEC-2, NEC-NEEDS version from ACES, the PC-compatible NECs on /pub/ra/rander/NEC at netcom.com, and NEC-4 from LLNL) and generates almost any plot of interest. Features include:

...Far Field Patterns
...Near Electric and Magnetic Field Patterns
...Impedance and Admittance versus Frequency
...Derived Impedance quantities (Return Loss, VSWR) versus Frequency

Types of Plots Available

...X-Y (rectilinear)
...Polar
...Smith Chart (impedance and admittance coordinates)

Features

...Multiple-frequency plots of all radiation patterns; pick and choose which frequencies to plot.
...Plot Impedance or Admittance versus Frequency on either rectilinear or Smith coordinates.
Plot impedances of antenna systems with multiple inputs on one chart (useful for array antennas)
...User-definable VSWR circles overlaid on Smith chart plots
...User-definable plot scaling (dynamic range, size of divisions, log axes), as well as normalized
plots
...Automatic Legend generation showing frequency, constant parameters (like angles, distances,
etc.), and antenna environment. A plot has *all* the information needed to interpret your results
...Cut and paste plots to any Windows-based application
...Print plots to any Windows printer/plotter.
...Save plots to disk in .WMF (Windows Metafile) format

Some Upcoming Features
NOTE: These features do not require purchasing an upgrade. They will be available FREE to all
previous purchasers when completed.

...Three-dimensional plots for higher-directivity antenna designs
...Plots available for Receiving Antenna Patterns, Ground Wave Patterns (RP1 card), and Maximum Coupling Impedances (CP card).

...Additionally, NECGraph can be modified to parse your custom program output (e.g., NEC-BSC, etc.). Contact the author for arrangements.

Here's the deal:

NECGraph-Windows is available *only* directly from the author for $40 U.S. (international will be
higher depending on duties and postage--contact the author for final pricing). Cashier's Check/Personal Check/Money Order all acceptable; please no Credit Card orders. Note that AZ Sales Tax will be collected for shipments to Arizona addresses. Quantity discounts and site licensing is available; contact the author for details.

For your money you get:

1. NECGraph-Windows with on-disk documentation
2. Unlimited support and bug-fixes
3. Program upgrades, as they become available, for $10 (domestic). Plus, if you suggest an improvement that's incorporated in an official release, you get that upgrade for FREE.

For answers to questions, ordering, etc., contact the author using any of the following methods:

>Any suggestions besides spending bucks on a new battery pack.

Sounds like a shorted or reversed cell. If you have never seen the
battery perform well, and it's only four months old, send it back to the
manufacturer. Tell them it does not seem to work properly and ask for a
replacement. I would bet they'll send you a new one.

You could disassemble the case and shock the bad cell back to life if
it's reversed. However there could still be damage that will result in
poor performance in the long term. My advise is to send it back and get
a good, fresh one.

Be careful about discharging below 1V per cell. That is normally what
causes reversal.

i guess i'm stumped as to why a station in distress would not call "mayday"?

if you're worried, i'd just use a different prosign -- if we're talking race cars
maybe the names of famous drivers killed in serious crashes would be used...
calling a "Sachs" or "Pollard" would keep the scanner guys guessing as well.

well, at the time the current tech license was being discussed, the plan put forth by the ARRL was no code required above 220 MHz. Right now, i suppose they'd tend to back the status quo.

remember we're talking about an exam requirement -- not whether or not operating Morse code will be banned....

Must be an AGGIE_PACK !

No just kidding. I have a similar pack, that showed
these characteristics. Seems one of the six cells was
bad. Using a cheap volt meter, I ran the pack just
until the low battery indicator came on. Then, I
opened the pack, and checked voltage on each of the
cells. Five of the cells were 1.1 volts, and one cell
was around 0.95 volts. This was the 'bad' cell.
Replacing it fixed the pack back to new and it's given
no signs of failure after 2 years of normal ham use.

Al: See item number 5. The use of any portable electronic device under 91.21 is at the discretion of the operator (airline). Some will allow scanners, some limit it to certian bands of operation, some prohibit all together. And remember that just because one airline might allow the use of certain devices, others may not - in both cases, 91.21 applies.

>g-taylor4@tamu.edu
Try checking the peak voltage of the charger on a scope. Or a different
charger. If it's OK, the problem is the pack. You're right that memory effect
is a pretty minor concern these days. But over heating during charge is a still
a big concern. Has this ever happened? If you are able to measure cell voltages
then you sould be able to see if one is reversed. But on the whole, I'd suspect
that you just have a defective cell, especially if the pack has always behaved
this way. /^\

IMO, a scanner would be the worst device possible to use on an airplane. Since it has a Local Oscillator that may move over a large frequency range, the chances are high that one or more of the frequencies it stops on may cause interference to one or more of the aircraft's systems.

Let us know what flights you intend to take so the rest of us can avoid them <grin>.

>from Baton Rouge in Houston, but cant hit it from Lafayette!

Alas, alligator repeaters are a chronic problem, but being an alligator
user is nearly as bad. When you key several repeaters at the same time,
you're doing no one a favor. Hopefully that's not the case in your location,
and you should run whatever ERP it takes to do the job, but do keep in mind
the poor co-channel repeater owners and users you may QRM when you boost the
power.

And pester those alligator repeater operators to clean up their acts too.
A good repeater is neither an alligator nor a bunny rabbit. It should be
able to be heard as far as it can hear, and no further. A balanced system
is what's desired. Actually, given the user preference for HTs, bunny
rabbit repeaters may be slightly better than balanced repeaters. It's
rarely necessary for a well sited repeater to run more than 5 to 10 watts.
Mine is currently covering a large segment of North Georgia with an output
power of 8 watts. (That's not by design, I'll admit, but the result of
a problem with the PA that obviously doesn't need to be solved since
the machine is now very reciprocal, at least until I rebuild it to
hear even better, which is in the works.)

Actually, the BOD has touched on the topic at the last two board
meetings, you have to read the mice type. Back in January they
voiced support for continued code speed testing to the IARU, and at
the most recent BOD meeting they expressed support for "maintaining
traditional values" in testing, a code phrase for continued support
of Morse speed testing.

In article <41a99e$5cf@gaudi.lahabra.chevron.com> Curtis Wheeler <cwheeler@ccnet.com>
writes:
>
>97.113(a)(3) prohibits communication where the licensee has a pecuniary
>interest, including commnications on behalf of an employer. This is
>where calling in late to work is interpreted as being a no-no. You have
>a pecuniary interest in going to work since they pay you - in addition,
>if your employer wants to know if you will be late, such communications
>would be on behalf, or in the interest of your employer.
>
>The infamous "pizza" calls were previously interpreted as being illegal.
> Now you can get away with it, I guess. But I don't believe the actual
>rule was changed, just the interpretation (someone tell me if I am wrong
>on that). But you should remember that the reason the interpretaion was
>relaxed was to allow Amateurs to assist with logistics for public
>service. It was not done to turn the Amateur service into an alternative
>for another, more appropriate service, such as cellular.

You're wrong on that, the actual text was changed. The old text was,

97.113(a) No amateur station shall transmit any communications the
purpose of which is to facilitate the business or commercial
affairs of any party. No station shall transmit communications as
an alternative to other authorized services, except as necessary
to providing emergency communications. ....

The relevant new text is,

97.113 Prohibited transmissions.

97.113(a)(3) Communications in which the station licensee or control
operator has a pecuniary interest, including communicating on behalf
of an employer. ...

97.113(a)(5) Communications, on a regular basis, which could reasonably
be furnished alternatively through other radio services.

Notice that under the old wording, if *any* party had a financial
interest, the transmission was prohibited. Under the new wording,
only the licensee's financial interest is of concern. Therefore
ordering pizzas is now Ok because the amateur isn't profiting
from the transaction.

>97.103(a)(5) prohibits "Communications, on a regular basis,which could
>reasonably be furnished alternitively through other radio services."
>This is where one might be justified in saying that you should consider
>GMRS or a cellular phone if you want to talk to the same person (like

>your spuose) on the autopatch every night on your way home from work or
>conduct "personal business" communications. Just a thought.

Under a strict reading of the *old* wording, phone patching in general
was illegal anywhere cellular service was available (except for emergencies).
Now under the new wording, phone patches are Ok as long as you only do them
occasionally. I tend to agree with you that regular nightly calls to the
spouse on the patch would still be considered illegal where alternate radio
services, such as cellular, are offered because they constitute a regular
use of the patch in lieu of other authorized services.

3324. Kenwood 733 vs Alinco 610

Newsgroup: rec.radio.amateur.misc
Date: 1995-08-23 00:00:00 UTC
From: greg@core.rose.hp.com
Message-ID: <DDs17w.Mx5@icon.rose.hp.com>
Source record: 239942

I've narrowed my search for a dual band mobile to the Kenwood 733 or the new Alinco 610. I've read a number of posts re the 733; has anybody played with the Alinco model enough to share their impressions? I'm leaning toward the Alinco right now, but only 'cause I've got their HT and am satisfied with it.

Thanks,

Greg KO6TH

The telephone number for IRCI is (407) 489-0956. Fax is (407) 464-6386.

I first called outside of their normal business hours. Their answering machine answered with "...this is a message machine. It does not take messages..."

I did call back and request a catalog. I didn't buy anything from them.

I wondered: if their message machine didn't take messages...

Look up the people at the QCWA (Quarter Century Wireless Association).
They have an extensive collection of old callbooks.

They advertise in the World Radio magazine (and perhaps other places).

And the now standard form answer to that response is, *read the post*.
He's talking about the HTX-2*1*2, which is Radio Shack's *mobile rig*,
not a HT.

And to answer the original question, yes, receive can be opened, though
you can't store out of band frequencies in memory. And I don't know if
transmit can be similarly opened, but considering RS's paranoia on that
subject, I'd guess the answer is no. This radio doesn't have nearly as
good out of band IM rejection as their HTs, and the price isn't that
attractive either. I'd go with an Icom or Yaesu instead (unless RS has
a fabulous sale).

ACS Wireless, Inc. (1-800-995-5500) has recently launched its Stratus On-the-Go lightweight telephone headset for use with cellular and cordless telephones. It is compatible with a number of phones on the market today with headset jacks and, for example, works very well with 900MHz cordless phones from Uniden (1-817-858-3827 ext3827).

Lewis, again! We can't go on meeting like this!

Suggestion. I have a Digital Signal processor from MFJ
which works gang-busters. It takes the audio and massages that.

This means you could use it on any rig you have now or in the
future. Beats the heck out of opening up the rig to install and
all that stuff.

Cheers. Murray Kelly. vk4aok.

I saw one of the MFJ rigs yesterday at a local electronics shop. I ordered
a Yaesu CW filter and I believe after I get it a DSP is my next purchase.
The wife is going to kill me. ;-)

Rod, sounds like you experienced this problem yourself. However,
proper grounding of equipment will prevent this from occuring. As an
Extra Calls ham, you should have known better than to use an end fed
wire without a proper ground. How you people pass the test for Extra
absolutely amazes me.

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 23/2330Z AUGUST 1995 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 23 AUGUST AND FORECAST FOR 24 AUGUST - 26 AUGUST

1A. SOLAR SUMMARY
Activity: very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 74/11

GOES satellite data for 22 Aug
Daily Proton Fluence >1 MeV: 3.0E+05
Daily Proton Fluence >10 MeV: 1.8E+04
Daily Electron Fluence >2 MeV: 4.0E+07 (normal)
X-ray background: A1.0
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
24 Aug 25 Aug 26 Aug
Activity Low Low Low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 24 Aug: 74/11

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: active early in UT day then quiet to
unsettled

Estimated Indices : A K Observed A Index 22 Aug
Learmonth 9 4223 2111
Fredericksburg 13 9
Planetary 15 7

Observed Kp for 22 Aug: 1010 2224
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
24 Aug 5 Quiet
25 Aug 5 Quiet
26 Aug 5 Quiet
COMMENT: Recurrence suggest quiet conditions until 31 August.

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND

DATE LOW MIDDLE HIGH
23 Aug normal normal fair-normal
PCA Event : None.

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
24 Aug normal normal normal
25 Aug normal normal normal
26 Aug normal normal normal

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Observed
DATE T index MUFs at Sydney
23 Aug 35 enhanced 15-30% 02-14UT then near predicted monthly
values.

Predicted Monthly T index for August: 15

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T index MUFs
24 Aug 25 About 10% above predicted monthly values
25 Aug 25 About 10% above predicted monthly values
26 Aug 25 About 10% above predicted monthly values
COMMENT: Darwin MUFs: near predicted monthly values.
Townsville MUFs: enhanced 15-30% most of the UT day
Hobart MUFs: near predicted monthly values.

>

For the ultimate in dynamic range, I think there are significant
advantages to building a phasing or single conversion transceiver.
With the splatter from improperly used bricks limiting your
ability to hear weak stations nearby, getting *only* 40 dB
of opposite sideband supression shouldn't be a problem. In New
England, with really big local signals, you need very good
filtering--I ended up using cascaded crystal filters before and
after the IF amps on my 222 transceiver. Properly done, you can
get 90 to 100 dB SSB bandwidth dynamic ranges, on par with HF radios,
and significantly better most cascaded transverter/HF radio combinations.

Zack zlau@arrl.org.

Hi there Hams

Amateur Persistence

The first rule of DXing (and all of amateur radio, too) is: Listen,
Listen, Listen.
The next most inportant rule is:
Be there to practice Rule No. 1!
Okay, so we all admit conditions could be better. But along with
filling in for your column's conductor once in a while as he takes a much
needed vacation, it also gives me great pleasure to do Rule No. 1 as often as
time permits. And as many of you as possible should be out there to do Rule 1,
as often as your time permits.

Consider the major contest weekands: Even if conditions are not lik

Consider the mahor contest weekands: Even if conditions are not like
what we saw in 1989 through 1991 or 1992. We still see phenomenal scores.
But why? Because the bands are heavily populated with a large part of the
amateur community out there. Praticipating for whatever reason they wish, the
chances of making that needed contact are bettered. My point is that even when conditions

My point is that even when conditions are not supposed to be good, it may still
be possible to work the DX that you might have missed if you hadn't tried.
If enough stations worldwide would take this "let's-try-and-see" attitude,
conditions might not really be so bad after all..

Thats all

I got that information from "PROPAGATION"

from the magazine " 73 AMATEUR RADIO TODAY"

It's in the Septembers issue 1995 page 81

SB SPCL ARL ARLX046
ARLX046 Sunspot hints new cycle

Astronomers at the California Institute of Technology say they have identified the first new sunspot in the next sunspot cycle.

Scientists at Caltech's Big Bear Solar Observatory in Big Bear City, California, photographed the spot on August 12.

''This makes us happy,'' said Hal Zirin, professor of astrophysics at Caltech and director of the Big Bear facility. ''The sun is a lot more interesting to study when things are going on.''

Early in the 11-year sunspot cycle, sunspots appear rarely and at relatively high solar latitudes around 30 to 35 degrees, then increase in frequency and appear at lower latitudes until they reach sunspot maximum, Caltech said. After this peak in activity, the number of sunspots slowly declines, and they appear ever closer to the sun's equator until they reach a relatively quiet phase called sunspot minimum.

The sun has been in a quiet period through much of 1994 and this year, with a few spots showing up near the equator. The new sunspot found on August 12 appeared at a solar latitude of 21 degrees, and its magnetic polarity is opposite to that seen over the last decade, a key to identifying it as ''the manifestation'' of the start of a new cycle, Caltech said.

Scientists at Caltech said they expected an early beginning to Cycle 23, but not this early. ''Sunspots in the new cycle should rapidly become more common and reach a high level of activity in 1998 or 1999,'' Caltech said.

I don't suppose you'll have any problems with living in the wrong district, will you (I'm not familar with all aspects of the new program where you can specifically request certain call signs). I know that in the early years of ham radio, the call sign districts were not the same as they are now (e.g., Kentucky was in the 9th district initially, and was later grouped into the 4th district).

Dave

P.S. I'm a past president of the UK Amateur Radio Club, which started with the call sign 9JY (This was before they need prefixes!). It went through W9JY, and eventually ended up as W4JP.

> able to match, or nearly match, the rest.

Gary, I am in process of getting a newer used HF rig, so my IC-745 will
become available for use as an IF for a transverter. Am I correct that
its shortcomings would be less apparent in that role? Would I be better
off getting a 2m transverter, or sell the 745 and get a 275H? What do you
mean, "modified" 275?

I'm sure I'll try some Mode A satellites, How far I'll go with satellites
depends on how expensive and difficult it will be once Phase 3D gets off
the ground (let's hope zat ze French rockette, she does not blow up again,
non?). A full Oscar 13 style az/el setup is out of my reach right now.

I don't know how deep I want to get into VHF until I've tried it a bit.
So I'm reluctant to blow for a 275H or a 736R just yet. But if I'm going
to be limited by second class performance with a transverter, maybe I
ought to just take the plunge.

Anyway, I've ordered some info from Down East Microwave and Hamtronics.
Have you any experience with these models?

> I've got a stack of SSB Electronics transverters (which perform great)

It is an interesting question, but just wanted to note that Ten Tec did this sort of thing since the '70's with their outboard VFO's. They would actually mix both VFO frequencies, I suspect, and Ten Tec had a "balance" control so you could listen in to two frequencies simultaneously and independently controlled. It was simple, and worked really well.

Thanks, Grant. I'll check to see if Prodigy has the same sort of thing as Compuserve but I doubt it. I've checked out Sony car stereo's and they aren't advertising the "AM Max" feature. I haven't checked their ES line, maybe its there.

Reply from Clint Bradford

>My FIRST HAND information came directly from Southern California's
>largest cellular carrier, FYI.

It's OK Clint, my carrier told me that the first time too. Obviously,
they don't train their sales people to know about this option, as it is
in their best interest to SELL YOU SERVICE. They don't make any money off
my second phone using the same number. There is no commission to be made.

But by persistence, you will find out that is IS entirely legal, ethical,
appropriate, and being done by informed consumers of cellular service
nationwide.

Best wishes,
William Biggs

FIRST HAND user of two phones on the same number, with FIRST HAND
blessing of Southwestern Bell Mobile Systems.

Now, lets get back to amateur radio......

>the UK be don't get to use the 220 MHz band.

In fairness, it should be noted that that stack is expensive, over
$5000 if bought new. The drawback of a stack of multimodes is that
you're paying for redundant control panels and IF electronics. But
that's also a strength, see below.

>These are fun and cute and easy to operate and for FM users they offer the
>tones and shifts that are called for. But there are limitations and also
>problems. The rigs lack useful features found in most HF rigs (e.g. vox

>filters need to be soldered to boards which are less than a breeze to
>remove) means that they are far from the perfect solution. Perhaps the
>arrival of outboard audio DSP which can be transferred with one's
>headphones has levelled that one difference somewhat recently.

Filters are useful for the *other* digital modes too you know. :-)
DSP can be a big help, but IF filtering is still important to limit
AGC pumping and excess noise contributions. The best features of these
units are the ease of satellite operations, where crossbanding is the
rule and adjacent strong signals aren't an issue, and the ease of
scanning several bands at once for terrestrial activity.

I don't care at all about VOX, and the units will split tune.

>I'm pretty pleased with the units, but for serious weak signal c.w. work I
>admit that I very much prefer to operate my IC-765 plus a transverter.
>It's so much nicer to handle and tune, with its large controls and
>indicators and with filtering facilities which are in quite a different
>class altogether.

No doubt. I was addressing mostly those who would have to *buy* or
commit full time a HF rig just to use transverters. The price of a

good HF rig and the price of a good transverter plus amplifier together
are greater than the price of a IC275H, and if you have no other use for
a HF rig, that's sort of a waste of money. And if you do have another use
for the HF rig, you've got the hassle of switching back and forth
all the time. Plus transverters for the higher bands typically want
a 144 MHz IF anyway so the HF rig is only useful for 2m and 70 cm
transverters unless you want to cascade transverters, which generally
isn't a good idea.

I've got a stack of SSB Electronics transverters (which perform great)
similar to your stack of Icoms, but I don't use them as much because
of the pain of switching everything around just to give a tune across
a band to see if there's any activity afoot, not to mention that the HF
rig/transverter combo limits you to just a sliver of the particular UHF
band for which it's made while the multimodes generally cover the entire
band. It's lots easier to just spin the dial on one of the multimodes
that are already hooked up and ready to go, and be able to scan an entire
band for activity in several modes.

Of course activity patterns are different here in the SE than in Europe
or even New England. I go for days at a time tuning some bands with nothing
but hssssssss... in the SSB/CW segments. The *only* amateur activity I've
ever heard on 902 MHz has been ATV, FM links, and digital trunks for example.
2m and 70cm are more active with SSB/CW, at least in the satellite segments,
as is 23cm, but those bands are quiet a lot of the time too except for
repeaters, digital, and ATV on the latter two. It's nice to have several
radios listening at once for activity. That's where the redundant IFs
and control panels pay off.

>something similar, though not the same.

Typically, a 5 ms rise and fall slope with a variable duration flat top
is used for the modulating signal. That's not ideal from a bandwidth
standpoint, but it's an easy modulation shaping to achieve, IE just an
RC time constant integrator is required. A raised cosine shaping would
minimize the bandwidth occupied by the sidebands, but that would require
much more complex modulation shaping circuitry.

>might be AC so you'll need to rectify the voltage.

Bike generators are typically DC (generators typically are, alternators produce AC), and as is typical of simple DC generators, regulation is awful. A nice fat gell cell can act as your filter and regulator though, just don't forget a reverse polarity diode to keep the battery from turning the generator into a motor when you aren't pedaling fast enough. (Unless you *want* motor assist on the hills, of course.)

But a new HT might be a better solution. One that only lasts 4 hours on receive isn't good at all by today's standards. My little Standard C508A runs for over a month on one set of 2 AA alkaline batteries. Even my old FT470 runs for a couple of days on receive (with power saver function engaged). Talking a lot exhausts the batteries faster, of course.

Hello,

I have the following things for sale:

1. MFJ-1278 Multi Mode Data Controller TNC
- Mint Condition
- Used for less than 5 hours!
- Includes all manuals and original packing.
- Includes a certificate to upgrade the ROM for free.

2. MULTICOM Communication package that works with MFJ 1278
- All manuals and disks (3.5') included.

3. Accessories
- TNC to Computer cable
- HT (Icom) to TNC cable
- Power supply

******* TOTAL PACKAGE FOR: $ 225.00. ********

Note:
You have to handle shipping. Total package weighs about 4/5 lbs.

If interested, please e-mail me at: rafeek@netcom.com

>
Hi Joe,

The new FT-1000MP will only be available in a 100 watt version. It is designed to be marketed between the FT-990 and FT-1000D. The FT-1000D is the only Yaesu radio that will be available (at least for now) with 200 watts.

Since the new MP is 117/220 VAC and 13 VDC, your might get more than 100 watts if you run it off a bigger DC supply....

3366. Doing Business with Electro Automatic Corp.

Newsgroup: rec.radio.amateur.misc
Date: 1995-08-24 00:00:00 UTC
From: William_A._Kirsanoff@ccmail.anatcp.rockwell.COM
Message-ID: <9507238092.AA809221322@ccmail.anatcp.rockwell.com>
Source record: 239886

I generally avoid posting negative comments about companies and products, but I feel a need to make an exception in this case. Just a word to those who would buy mail order from Electro Automatic Corp. in Lawrence Massachusetts: buyer beware!

I have been looking for an ear microphone with improved performance over the Comet I use now. I talked to Rolf (KE1Y) at Automatic Electric regarding their "Eartalk" unit, and carefully verified that the unit was an ear PHONE not an ear BUD. I can not retain an ear bud in my ear. After assurances that the unit was indeed an ear PHONE, I ordered, and was told to expect two day delivery via priority mail. After a week, a follow up call determined the order had been lost. When I finally received the unit, guess what: it was indeed an ear BUD. I called, advised I would return the unit the same way they sent it to me, and I would request a refund.

In follow up calls regarding the refund, I found that I always had to talk to Rolf, who was out of the office. I never had a call returned. I did catch Rolf answering the phone once, and he assured me he had sent out a check. After another two week wait, I sent a second letter, with a copy to my Visa bank. With Visa's aid, I finally got a partial refund three months after the initial transaction. Rolf took a 15% restocking charge, despite the fact that his misrepresentation caused the return, I did not expect and did not receive a refund for the postage, but he also creamed an extra $1.00 "handling".

My point: I will not do further business with Electro Automatic. I would advise anyone who does to be aware that returns are not handled well and that the aid of their credit card company may be required. Most credit card companies have a time limit for disputing a transaction, don't let him stall you passed the limit.

>
Not only that, it would seem that if a terrorist wanted to down a plane all they would have to do this zap the plan with RF and watch the plane fall. I'm sure it would be easier to plant a RFI bomb on a plane rather than an explosive device.

My guess is airliners are paranoid and don't want to bother with the testing of myriads of devices that throw out RFI. So they bann everything in sight to avoid any possibility of disaster.

I can just see it now, a crazed maniac will hold a plane hostage in the air. "One false move and I'll turn on my scanner!!!"

It's a dead issue. Out of several hundred comments received
by the FCC only a handful (about enough to fill two pages
in Freds' CQ column) had anything positive to say about
the petition to ban Morse practice and info bulletins on
HF.

PS: Contrary to reports, ARRL did NOT "launch a letter
writing campaign".

PPS: Did you hear that Uncle Fred has suggested to
FCC that VEC's (such as his "W5YI Group") take over the
issuance of special event (1x1) calls for a fee?

For Pierre and everybody else who asks questions like these:

Why are you asking HERE?

You'll get far more trustworthy information by checking the source.
For Canada: call your local Industry Canada office and get the information yourself. They'll mail it to you for free, and it's a local number.
You can't ask for better than that.

When I called (the local number here in London. ON), the person I reached was very helpful, despite me calling near quitting time on a Friday. I received a large helpful package of paper on the following Tuesday.

One of the questions I asked was about the 160-190 kHz band... the regulations are the same as the US.

>Please Reply, I dont read the news often enough for my server.

done.

>Does anyone know the 'common' UHF/VHF frequencies used by
>covert radio surveillance transmitters (bugs)?

Generally above 50 MHz. Below that frequency it is hard to get
much antenna efficiency with limited lengths. DC (battery) to
RF efficiency is critical for good battery length.

The upper end of freqs is ligh0t. Thru-air and fiber links are
not hard to make these days. They generally go to RF transmitters
outside the window.

>I would also be interested to hear from anyone who has
>picked up such a bug in a 'sweep'.

The guys that talk aren't to be believed.

I was A cub Master many years ago for a local Cub Scout group.. I
always got the info from the leaders magazine. However, Boy Scout
National Headquarters can provide all info, forms for ordering
patches, etc.. Check with the local council office for the National
address in Texas (i think). I don't have the address anymore..
Look under Boy Scouts of America in phone book for local number..
They should be able to give you the address.
The ARRL may have some info on JOTA also.

I do part-time consulting work for a small firm that sends installation crews out to customer facilities, and they have asked me what it takes to get a license to operate with commercial HT's so crew members can stay in touch with each other - and/or maybe even to run a commercial repeater so they could remain in touch with the office.

Anybody out there familiar with the application process for this class of operation?

3379. GB2RS News 27th August 1995

Newsgroup: rec.radio.amateur.misc
Date: 1995-08-24 00:00:00 UTC
From: David Hough <dave@llondel.demon.co.uk>
Message-ID: <809314961snx@llondel.demon.co.uk>
Source record: 239899
Cross-posted to: uk.radio.amateur,rec.radio.info,rec.radio.amateur.misc

Good morning. It's Sunday the 27th of August and here is the GB2RS news broadcast, prepared by the RSGB and intended for all radio amateurs and short-wave listeners.

We start this week with news that the very-special Special Event Callsign M1OOG, that is Mike One Oscar Oscar Golf, is on the air from Friday the 25th of August for 28 days. The callsign symbolises the 100th anniversary of Guglielmo Marconi's invention of radio, and is only the second time that the Radiocommunications Agency has authorised the use of an M callsign for amateur stations.

The M1OOG callsign is being used in conjunction with the RSGB's International HF Convention, which takes place at Old Windsor in Berkshire on the 9th and 10th of September. The event features lectures and presentations from some of the world's top HF operators and DXers, including Jim Smith, VK9NS, who will give a talk on 40 years of Amateur Radio in Bhutan. An article by Jim Smith on last year's A51MOC operation from Bhutan appears in the September Radio Communication, which was posted to all members of the RSGB during the week.

There will also be a 48-hour contest station operating in the WAE phone contest and, for the first time, DXCC QSL card checking will be available at the convention.

Further details of the Convention and a synopsis of the lectures are published on pages 21 and 40 of the September RadCom, or may be obtained from Marcia Brimson at RSGB Headquarters. Some overnight accommodation is still available at the Conference Centre, and bookings may be made by contacting Fay Huxley at RSGB HQ on 01707 659015. Day visitors are also very welcome.

The Centre for the History of Defence Electronics has been opened at Bournemouth University. They are seeking to interview people with radio or radar experience from the Second World War up to the 1960s. If you can help, contact John Burtenshaw, G1HOK, at the university, on 01202 595089.

Once again, we are able to report news of exceptional VHF propagation. Following the 2 metre news broadcast on the 20th of August, GB2RS newsreader G4NZQ in Norwich spent almost an hour taking calls from the West Country to Germany, with stations around Hamburg in particular reporting 'solid copy' throughout the broadcast.

The IEE will be staging an International Conference on 100 Years of Radio at Savoy Place in London between the 5th and 7th of September, at

which a number of radio amateurs will be making significant contributions. One of the sessions, entitled Tuning and the Amateur, is chaired by RadCom 'Technical Topics' columnist Pat Hawker, G3VA. It will include a paper called Amateur Radio - Past, Present and Future by G3ZCZ, which will be presented by Richard Limebear, G3RWL. Other contributors include Professor Martin Sweeting, G3YJO, from the University of Surrey UoSAT programme; and Cecil Ramsbottom, G3BZQ, who will present a paper called The Era of the Home Wireless Constructor. For further details contact IEE's Conference Services on 0171 344 5477 as soon as possible.

Now some items of HF DX news from the weekly RSGB DX News Sheet, which is edited by Chris Page, G4BUE:

From the Lebanon, special event station OD5LEB is active today, the 27th of August from 3088-metre high Mount Kornet El Saouda, the highest peak in Lebanon. Operation will be on CW, SSB and Packet on HF and 2 metres.

From the Seychelles, DL3NEO will be signing S79NEO until the 8th of September. Activity will be on 10 to 160 metres, except 80 metres, on CW and SSB.

And from the USA, special station WW2END will be active from the battleship Missouri BB-63 from the 1st to 4th of September, to commemorate the end of the Second World War.

Now news of some special event stations:

GR0VLB is on the air this weekend, from Friday the 25th to Sunday the 27th of August, representing the Voluntary Life Brigade in Sunderland.

GB2SGS is on the air from MOOT 95, a camp for over one thousand Scouts and Guides at the Suffolk Show Ground, near Ipswich, from Friday the 25th until Monday the 28th of August. The station will be mainly on 80 and 40 metres SSB and CW, and on 2 metres and 70cm SSB and FM.

The Barry Amateur Radio Society is operating GB5FI from Flat Holm Island in the Bristol Channel, along with members of the Passau Radio Club from Bavaria, from Friday the 25th until Tuesday the 29th of August. The station will be active on HF and VHF, and modes will include Amtor and Pactor.

The Swansea and Port Talbot clubs are operating GB100NT from Aberdulais Falls this weekend, the 26th and 27th of August, in order to celebrate the 100th anniversary of the National Trust. Next weekend, the 2nd and 3rd of September, the South Derbyshire and Ashby West clubs will operate GB100NT from Calke Abbey.

Derwentside Amateur Radio Club is operating GB4DAR from the Allensford Show Ground in Consett, County Durham, today, Sunday the 27th of August.

This weekend, the 26th and 27th of August, is the Northern Lighthouse Weekend, when eleven Scottish special event stations are active from lighthouses. The stations are located in the Shetlands, Orkneys, Outer

Hebrides and mainland Scotland, and are using the callsign GB2L followed by one or two letters indicating the name of the lighthouse. The stations are mainly active on 10 to 40 metres, SSB and a list of the stations participating can be found on page 33 of the August RadCom.

The Leicester Radio Society are operating GB4APS from the Abbey Park Show in Leicester today and tomorrow, the 27th and 28th of August.

The Waterside Amateur Radio Society will be operating GB6RG from the Rotary Club Gala at Applemore School, near Hythe, in Hampshire, tomorrow, Monday the 28th of August. The station will be on the air from 1.00 to 5.00 pm on HF and 2 metres. The operators have been sponsored for the number of contacts made in order to raise funds for local charities.

And GB2RAF will be on the air next weekend, the 2nd and 3rd of September, from the Shoreham Air Show. The station will be operated by Royal Air Force Amateur Radio Society members, and further details may be obtained from Stan Williams, G3LQI, on 01903 754017.

Next the Rally News:

The Galashiels and District Amateur Radio Society is holding an open day and radio rally at the Focus Centre, Livingstone Place, Galashiels today, the 27th of August. The event features traders, club stalls, a bring and buy stand, raffles and refreshments.

The Coleraine and District Amateur Radio Society's annual rally takes place today, the 27th, at the Lodge Hotel, Coleraine. The event features a large number of traders, and doors open at midday.

The Torbay Amateur Radio Society rally also takes place on Sunday the 27th at Clenon Valley Leisure Centre, Paignton, in Devon. The event features traders, an RSGB bookstall and membership information stand, special interest groups, a bring and buy stand, and a restaurant and bar.

The Huntingdonshire Amateur Radio Society Bank Holiday Monday Rally will take place on the 28th of August at St Peter's Road, Huntingdon. The event features two halls and a car boot sale.

The annual Wight Wireless Rally will take place on Saturday the 2nd of September at the National Wireless Museum, Arreton Manor, Newport, Isle of Wight. The event features traders, a bring and buy stand, and free admission to the National Wireless Museum. The doors will open at 11.00 am and talk-in will be on 2 metres, channel S22. Further details are available from Douglas Byrne, G3KPO, on 01983 567665.

The Telford Rally takes place at the Telford Exhibition and Racquet Centre on the 3rd of September. The event features traders, an RSGB bookstall and membership information stand, special interest groups and a bring and buy stall. For further details telephone 01952 588878.

The Vange Amateur Radio Society rally will take place at the Laindon Community Centre, Basildon, in Essex on Sunday the 3rd of September. Morse tests will be available on demand at the rally. The doors open at 10.30 am and talk-in will be on 2 metres channel S22. Further information may be obtained from Stuart, G1VWB, on 01375 859632.

The Bristol Radio Rally will be on Sunday the 3rd of September. The event features more than 100 tables and a large bring and buy stand. Talk-in will be on 2 metres channel S22 and further details may be obtained from Muriel, G4YZR, on 01275 834282.

Now for the HF contest news:

There are no RSGB HF Contests this weekend. However, next weekend, the 2nd and 3rd of September, SSB Field Day takes place. This is a portable contest which runs from 1500UTC on the Saturday, for 24 hours. The full rules are in the June RadCom.

We know of two other HF contests next weekend: the AGCW 'straight key' event and the Bulgarian LZ DX CW contest. Brief rules for both of these contests are on page 22 of the August RadCom.

Next some VHF contest news:

The first event in the RSGB 144 MHz CW Cumulative Contests takes place on Tuesday the 29th of August from 2030 to 2300 local time. The rules are in the May RadCom.

And next weekend a series of 144 MHz contests take place. These are the RSGB 144 MHz Trophy, the IARU 144 MHz contest, and the RSGB 144 MHz Listener's contest, all of which run for 24 hours from 1400 UTC on Saturday the 2nd of September. The rules are in the June RadCom. However, entrants should note that there is a change of address for entries. They should be sent to Steve Thompson, GW8GSQ, at P O Box 29, Bridgend, CF35 5YA.

The fourth 144 MHz Backpacker contest also takes place next Sunday, the 3rd of September, from 1100 to 1500 UTC. The rules are on page 83 of the April RadCom.

And now the solar factual data:

The period from the 14th to the 20th of August saw solar activity at mostly very quiet levels and geomagnetic conditions at unsettled levels. Sunspot numbers increased from zero on the 14th, to 41 by the 16th, and then declined to 13 by the 20th. The mean was 21. Solar flux levels remained steady and varied from 70 to 72 units, with an average of 71 units. Only one solar flare was reported, and that was a C1/SN on the 18th. What is interesting about this flare is that it took place from a sunspot group that had not yet rotated around the east limb of the sun, and therefore was not visible from Earth. The electron fluence increased to very high levels on the 15th, lasting for three days before declining to moderate levels for the rest of the period. The X-Ray flux remained at its minimum level of A1.0 units every day. The 90-day solar flux

average on the 20th was 74 units, one unit down on last week.

Geomagnetic conditions started the period at active levels, with an Ap index of 22 units, and then declined to unsettled levels. The average was Ap 11 units. The aa indices, as supplied by the British Geological Survey for the period from the 8th to the 14th of August, started at active levels with 26.1 nanoTeslas on the 9th. Conditions then declined to quiet levels with 9.2 nanoTeslas on the 12th. The average was 17.8 nanoTeslas, about K2.

I'll repeat the figures: spots - 21, flux - 71, Ap index - 12, X-Ray flux - A1.0.

Now the ionospheric data for Central France.

The F2 daytime critical frequencies at Poitiers, as reported by Meudon for the period from the 11th to the 17th of August, increased from 5.5MHz on the 13th, to 7.5MHz by the 17th, with an average of 6.2MHz. The darkness hour lows declined from 3.6MHz on the 11th, to 2.5MHz by the 14th, and then increased to 3.2MHz by the 17th. The average was 3.0MHz. The daytime highs took place between 1900 and 2000 hours, and the darkness hour lows between 0200 and 0500 hours every day.

I'll repeat the figures: highs - 6.2MHz, lows - 3.0MHz.

And lastly the solar forecast:

For the last six weeks solar activity has remained at very low levels, and the solar flux has only fluctuated between 68 and 75 units. You have to go back to the 11th of July to see a higher solar flux level than 75 units. Geomagnetic conditions have also been at quiet to unsettled levels, and the only brief periods of active conditions have been caused by recurring coronal holes. Only on the 1st of June and the 17th of July has there been an Ap index of 25 units, with all the other days below that figure. The forecast for the next seven days will see solar activity at very low levels and the solar flux in the low 70s. Geomagnetic activity is expected to be mostly quiet. Due to the very low levels of solar flux, the ionospheric MUFs during daylight hours are expected to be only about 19MHz in the south and 16MHz in the north, with the darkness hour lows around 11MHz.

And that's the end of the solar information.

Finally in the main news, SSL has informed the Society that as of last Wednesday morning, the latest callsigns allocated were in the G0 Whisky Juliet and G7 Victor Quebec series, and Novice calls in the 2 0 Alfa Mike and 2 1 Echo Juliet series.

DX Bulletin 45 ARLD045
From ARRL Headquarters
Newington CT August 24, 1995
To all radio amateurs

SB DX ARL ARLD045
ARLD045 DX news

This week's bulletin was made possible with information provided by David, G3OUF, Tedd, KB8NW, the OPDX Bulletin, and Contest Corral from QST. Thanks to all.

QATAR, A7. Thomas, DL9FCQ, will be in A7-land December 29 to January 14. He will sign A71AN/DL9FCQ, mostly on CW on 80 through 10 meters. QSL to DL9FCQ either direct or via the bureau.

TROMELIN, FR/T. Michel, FR5HG/T, was active on 14005 kHz at 0940z. Europeans have worked him on 18078 kHz at 0020z and 21002 kHz at 1700z. He should be on the air for three or four weeks. QSL via F6FNU.

GUERNSEY, GU. DL2MGP, DF6MS, DL5MHX and DL1MIA will be active through August 30 from IOTA EU-144. Two stations will be active mainly on CW, one at 100 watts output and another at QRP. QSL via the bureau to home calls or direct via DJ3QG.

LEBANON, OD. Rami, OD5SB, reports a DXpedition to the highest peak in Lebanon to be on the air August 27. Listen for OD5LEB on CW, SSB and packet.

SEYCHELLES, S7. Hannes, DL3NEO, should be active as S79NEO until September 8. Activity will be on 160 and 40 through 10 meter CW and SSB.

CHAD, TT8. TT8NU likes 20 meter CW between 1615 and 2000z. Also check 17 and 30 meters. QSL via F6FNU.

ANTIGUA, V2. Bill, KQ4GC, will sign KQ4GC/V2 September 6 to 14 on 80, 20 and 15 meter SSB. QSL via his CBA with SASE.

LORD HOWE ISLAND, VK9. W6OTC, N4TQO, KE6FV and W6/G0AZT will arrive on the island September 19 and depart September 26. Plans call for

three stations, RTTY, CW and SSB. Listen for VK9LZ on RTTY, VK9LX on CW and VK9NM on SSB. They will also be in the CQ WW RTTY contest. QSL all calls to Eddie Schneider, PO Box 5194, Richmond CA 94805.

EASTER ISLAND AND SALAS Y GOMEZ, XR. Bob, KK6EK, reports the DXpedition team will be active September 5 to 18 from Easter Island as XR0Y and September 7 to 11 from SyG as XR0Z. 30 meter activity will be limited to 10100 to 10115 kHz. The team will develop a database for the study of propagation, so they ask for real signal reports and not the gratuitous 599.

UK SPECIAL CALL SIGN. Attention prefix hunters. From August 25 to September 21 the call M1OOG will be on the air in celebration of 100 years of radio and honoring Marconi. This is only the second time the M prefix has been used, the first being in 1991 with M0RSE. M1OOG will be on CW and SSB. QSL via the RSGB QSL Bureau.

THIS WEEKEND ON THE RADIO. The Summer QRP Party and West Virginia QSO Party are both going on over the weekend. See page 119 in August QST for details.

Ross, this has to be the most STUPID inverted. circular doubled-back
logic I have ever seen anyone use! Thank youfor entertaining us with
your puerile attempt at humor!

You must have no life if you can't do any better than this.

RA>Organization: Athabasca University

RA>>You've lost the thread Ross. This had nothing to do with
RA>>BROADCASTERS. It was about hams, but don't let reality interfere
RA>>with your schtick about FM transmitters being simpler to build than
RA>>CW transmitters, he he!

You seem to be confused. It was probably someone else that
foolishly claimed that FM transmitters were simpler than CW
transmitters.

RA>Brian,
RA>You've got your atributation botched.

OK, I agree. BTW, It is attribution, not atributation.
Do they teach New Age spelling at Athabascau?

RA>But it's trivially easy to go
RA>back and get the original.

Not with an off-line mail reader on a BBS!

Let me help your memory. The question
RA>about "how many broadcasters" was your question, not mine. I just
RA>offered an answer. I didn't invent the question.

Well, you jumped into a thread knowing nothing about what was actually
being disputed.

RA>>RA>brian.carling@acenet.com (Brian Carling) writes:

RA>These two lines are the center of Brian's error.

Now you tell me who is in error! I was quoting "CM" whoever that was,
and YOU attributed it to me!
Talk about the pot calling the kettle "black!"

RA>After all, Brian has
RA>made so many errors in this group, we can't be surprised at another.

Go and boil your bottom sundry silly peson!

RA>>RA>About as many as there are HF broadcasters using an oscilator [sic]
RA>>RA>hooked up to a switch :).

RA>And the above two lines are my answer.

OK, then I guess you agree with me - fine!

RA>Ross ve6pdq

Ross - go and pick a fight somewhere else. You are sounding like a very confused person who has to become obnoxious to compensate for their own feelings of inferiority.

I think we all agree that a CW transmitter is simpler than an FM transmitter so stop grumbling and go eat your Wheaties!

CM>>CM>FYI the CW circuitry in my IC-745 is pretty complex. The CW
CM>>CM>filters alone cost around $300 and my Bencher hand key cost
CM>>CM>$80. It came equipped for SSB and FM. I had to spend an additional
CM>>CM>$380 to get on CW.

CM>>NONSENSE! What pure _B_ _S_!

CM>Are you accusing me of not telling the truth?

No, I am telling you that you are making a very stupid non sequitur.
FOLLOW THE THREAD!
Two other hams were discussing the advantages of CW. One said that a
CW transmitter is the simplest to BUILD for a young ham.

YOU foolishly jumped in and claimed that an FM transmitter is SIMPLER
than a CW transmitter. You changed the context to support a view
that is unrelated to the topic that was being discussed. You shanged it
to commercially built amateur radio equipment. That was not the topic.
Follow the thread next time, or explain what you mean! Otherwise,
don't get all excited if people, naturally fail to read your mind.

CM>My IC-745 came without
CM>the two CW filters. The CW selection position will not work without
CM>them 'cause there's no audio output. Please email me where the NONSENSE
CM>and _B_ _S_ exists.

Please, tell us how long it took you to build that IC-745?

CM>>Cecil, there are plenty of amateurs on QRP using simple one and two
CM>>transistor rigs, some home brew, some kits. I mean THOUSANDS!

CM>There are thousands of hams using single transistor oscillators for
CM>transmitters? If that were true, there should be a lot of chirps out
CM>there. Maybe we could set up a charity for those poor guys so they
CM>could at least add a final amplifier. It reminds me of the tale of
CM>starving people in third-world countries who can only afford CW rigs.

Oh shut up! If you can't follow a thread, don't jump in and try to
pick an idiotic fight.

CM>>BTW - if you are paying $300 for CW filters for an ICOM, you got taken!

CM>That's list price at HRO. One cost $180, the other cost $90

Just as I thought.

CM>>CM>Actually, a carbon mike is a much simpler device than the average
CM>>CM>commercial Morse key. You can make one out of pencil lead.

CM>>Again, pure B.S.

CM>OK, I challenge you to prove that my statements are false or else
CM>meet me in downtown Queen Creek at high noon. :-)

Your statements are not just wrong, they are incredibly stupid!
No hams USE a bloody carbon mike. This is amazingly childish!
How did you ever get a ham ticket?

CM>ps: My mother says you should wash your mouth out with soap.

P.S. My mother says that YOUR mother was a hamster and that your breath
smells of elderberries!

Any Radio Shack should have it, though the seem to sell quickly.
Radio Shack's price is also a little cheaper than ARRL's. It's the
same book, but with a slightly different cover.

It works ... not as well as a full-size fixed station antenna but it works.

I've used mobile antennae fixed with ground plane radials many times in lieu of the longer, more expensive, fixed antenna. They (the mobile) do not survive the elements as well nor will they deliver the gain of a full size antenna.

I am traveling to the Los Angeles area this weekend, and was wondering if a few people could suggest some active, open 2m- or 70cm-band repeaters for the West L.A. area (Westwood/Santa Monica).

By the way, does anybody know Gordon West's callsign & repeater freq.? I know he's in Southern California somewhere...

Please e-mail replies to "anb@nextstep.com"

Thanks!

The problem isn't RFI as such. The problem is that a lot of cheap
radio receivers are not well shielded. Thus, their local oscillators
radiate. It's impossible to build a receiver that will hear a
transmitter that's transmitting a few watts several hundred miles
away when some fool is transmitting a few milliwatts 10 feet away
from the receiver's antenna.

If all of the radio reception equipment was made such that the local
oscillators didn't radiate, then there would be no problem. However,
this requires some shielding and some thought, both of which increase
the cost of the product. In today's environment, users tend to go
after the cheaper product, regardless of the technical merit (and most
user's probably don't care anyway, at least, until that 747 comes
crashing through their roof).

Dave

P.S. I'm told that there were similar restrictions during World War II
concerning operating radio receiving equipment on ships. It seems that
submarines would use radio detection gear to detect the local oscillator
leakage in order to find and torpedo the ship.

The problem is devices that output spurs directly on aircraft frequencies.
No radio is immune to emissions on its input frequency.

>mean, "modified" 275?

Aside from cost, the main advantage of a good transverter is that it allows you to take advantage of the strong signal handling ability of your HF rig, and take advantage of its filters. Unfortunately, the IC-745's greatest weakness is its inability to handle strong signals well. If you aren't often contending with strong signals, you can get by using it with a transverter, but realize that you'll have a low performance setup.

There are a number of modifications that have been developed for the Icom multimodes to overcome limitations in the design. Most are rather esoteric, or apply only to the IC211, IC251, or IC271. Most of the deficiencies of those older rigs have been cured at the factory in the IC275. For example, Mutek offered a replacement front end board for the older radios that changed their noise figure from a pretty dismal 8 db to around 1.5 db. It also offered better strong signal handling, so it even helped if you were running a mast mount preamp.

>I'm sure I'll try some Mode A satellites, How far I'll go with satellites
>depends on how expensive and difficult it will be once Phase 3D gets off
>the ground (let's hope zat ze French rockette, she does not blow up again,
>non?). A full Oscar 13 style az/el setup is out of my reach right now.

You can do that cheaper than you might think. You have to do some building, but antennas aren't rocket science. Also, satellite ground station antennas don't have to be high to be effective. I operated here for over a year with just a tripod mast sitting on the ground and moving the antennas by hand. Worked fine on Oscar 10. I know a fellow who drags his antennas out of the garage and sets them up in the driveway when he wants to operate. Don't think you need dual

axis rotators and expensive commercial antennas on a tall tower to
work satellite. All that's *nice* though, and I'm glad I've got that
now. :-)

>I don't know how deep I want to get into VHF until I've tried it a bit.
>So I'm reluctant to blow for a 275H or a 736R just yet. But if I'm going
>to be limited by second class performance with a transverter, maybe I
>ought to just take the plunge.

Buy used. That way if you decide you don't like it, you won't take
a big hit when you resell the equipment. The first purchaser always
takes it in the wallet, let him. The Icom Twins or the Yaesu are
good choices for satellite, and they've been around long enough for
a used market to develop. Stay away from the Kenwood 790A, or I'll
get to say "I told you so". It sucks. The Icom 970 is too expensive,
and has some nagging problems of its own, I'd avoid it. The new
Icom 820 has some operating quirks, and I'd pass on it too unless a
minimum space single box is an absolute priority.

>Anyway, I've ordered some info from Down East Microwave and Hamtronics.
>Have you any experience with these models?

The Hamtronics transverters are junk, don't waste your money. (They do offer
a decent helically filtered preamp. I use one on my repeater. But it's
primarily designed to handle sites with strong out of band signals, and
not for satellite use.) The new DEM transverters seem pretty good. They're
optimized for strong signal handling rather than weak signal performance,
but that's Ok, a good mast mount GASFET preamp can take care of that.
ARR or Henry or SSB Electronics all market good mast mount preamps for
satellite.

>> I've got a stack of SSB Electronics transverters (which perform great)
>
>Cost? Address/phone? Likes/dislikes?

Expensive (in the neighborhood of $700 depending on the current dollar/mark
exchange rate). I'm not sure who the US distributor is now, used to be The
VHF Shop (in Mountaintop PA), but I think they go under the SSB Electronics
name now. Check in QST for ads.

They are 20 watts while most transverters are only 10. That means you can
throttle them back to 10 to drive an amp and they run cool. The high side
ins and outs are separate so you can do TR on the tower at the preamp. That's
good. The low side ins and outs are combined, which some people like, but I
think is bad. They're easy to split out, however, for use with a HF rig with
a separate receive antenna input, which is the way I prefer.

They have a good GASFET front end which is strong and quiet. Works good
with their mast mount preamp even in strong signal areas. The cabinets
are attractive, and feature a relative RF output meter. They run off of
12 volts DC, so you need a separate power supply. When you open one up,
you'll be impressed by the quality of workmanship exhibited. The manuals
are in German, but a schematic is a schematic. You can figure them out

even if you don't read German.

It always amazes me that they can't build an aircraft radio that's immune to RFI.

Skip,

It might be helpful if you had a set of schematics for the board. I would imagine that the PA section in one of those little devices would stand out rather well.

Let me know how the experiment goes - I might be interested in trying it out too!

Actually you could buy one of those floor mounted stalks that they use in police cruisers or used to until the amount of radio gear got to be too much. I know we mounted a cellphone on one about a foot aft of the stick on my ex-roomies car and it didn't interfere with driving and was accesible.

In addition my friend and I mounted a Yaesy FT-5200 on the left side of the console in a 1992 Taurus and it fits perfectly. If you look at the dashboard layout for long enough you'll find a place to mount the radio.

In <Pine.BSI.3.91.950823122942.13455C-100000@cais2.cais.com>, USCG TELECOMMS <gttm@cais.cais.com> writes:
>Kevin, can you tell us how Yaesu gets two VFOs to work independently on
>the same band without actully using two independent receivers?...Ron, W4VR
>

The usual method is to use two IF strips but one receiver front end (preamp, first mixer, roofing filter and first IF). If the first IF generates an "overload AGC" (see Rhode) that activates PIN diode attenuators in the front end to control extreme signal overload, and includes separate detectors each IF strip can be AGC'd separately and drive separate "S"-Meters.

However, this is only theoretical as I haven't seen the FT-1000MP schematics and/or block diagram.

3408. 1750 meter band in Canada

Newsgroup: rec.radio.amateur.misc
Date: 1995-08-24 00:00:00 UTC
From: const@step.polymtl.ca
Message-ID: <41gg7k$ssr@charles.cdec.polymtl.ca>
Source record: 239976

HI

I have found that there is a band way down at 160-190khz (if I remember correctly). I know that in US, the band does not need a licence (Not a ham band) and is limited to 1W Max and 50 ft max (antenna and feedline). That what the FCC part 15 has to say but what about in Canada.
- Do we have the same restrictions?
- Do we have the band or is it allocated for some other use.
- What about elsewhere on the globe?
- What modulation is allowed? (SSB,AM,FM?,Digital,voice...)

By the way is there any tranceiver designs I could build for that band or do I have to design it from scratch?

Please Reply, I dont read the news often enough for my server.

Thanks, 73

>become available for use as an IF for a transverter. Am I correct that
>its shortcomings would be less apparent in that role? Would I be better
>off getting a 2m transverter, or sell the 745 and get a 275H?

One disadvantage of the synthezized VHF all mode radios should be mentioned though: They have a horrendous LO noise floor. So if a strong station transmits nearby you can hear him 100 KHz up and down, no matter how clean his signal is. (During serious VHF work, like in contests or openings there are allways lots of strong stations)

Than, if you use an amplifier, you can clear easily half the band from interferring stations with your sprogs (contest winner's trick)

Thats where the HF rigs and older VXO- VHF rigs are much cleaner.

Just curious. I need to install a tri-bander (144,220,440) on a stand-off bracket on my tower (below my HF antenna) - for local use to the Packet network. Instead of buying a specific base antenna (some 10 ft in height and twice the price), I'd like to use a mobil antenna with the appropriate radials (about 3 ft high, with radials for 144 Mhz). Anyone see any obvious gotchas with this approach?

Thanks, Darrell.

3416. W & W Associates / DJ-F1T Battery Problems

Newsgroup: rec.radio.amateur.misc
Date: 1995-08-24 00:00:00 UTC
From: rrossi@VNET.IBM.COM
Message-ID: <199508241432.HAA27758@UCSD.EDU>
Source record: 239984

Folks,

I just want to relay my recent experience with these folks. I purchased a battery for my Alinco DJ-F1T from W & W Associates based on an ad in QST. The battery at first glance looked fine. I charged it up, put it on the radio and put it on my belt. Well when I pulled the radio off my belt the battery came loose from the radio and was only attached at the bottom latch (This is a back, not bottom, mounted battery). Upon closely comparing the battery to the original, I noted that the catch protruded too far from the case. This let the top of the battery become disengaged from the radio.

I sent the battery back to W & W Associates with a detailed description of the problem as I saw it along with diagrams. I received a new (actually refurbished) battery from them promptly WITH EXACTLY THE SAME PROBLEM. I just got of the phone with one of their representatives. She spoke with a technician told me that "that was the way our battery attaches to that radio". I told her that I would be sending the battery back and expecting a full refund. This, she told me, would not be a problem.

The representative did not seem to care much when I told her that I would be posting my experience to the internet and to the ARRL. I guess the moral is to order from the manufacturer. I admit that this is a subtle flaw, but it is a flaw that will damage the radio since the the battery supports the radio. W & W Associates were willing only to refund my money. DJ-F1T owners check your batteries carefully when you get them!!

>
>It always amazes me that they can't build an aircraft radio that's immune to
>RFI.

I have never seen a receiver that is *immune* from RFI. In fact, most
are capable of generating RFI. How exactly do you get rid of an
interfering signal that is on your desired frequency?

Most aircraft radios are built and perform a hell of a lot better than
just about any piece of consumer quality ham or scanner gear. And that's
really the point - Aircraft radios work very well and are regularly
maintained (for commercial ops). But unless you bring along a service
monitor, you wouldn't know if your personal electronic device was safe to
use. (Then you have to trust your service monitor not to cause
problems.)

An example - just two months ago we noticed an interference problem on
one of our UHF frequencies at our facility. Very localized. Turned out
to be the receptionist's AM/FM clock radio had an LO that was sending out
pretty strong harmomics. It was malfunctioning, and she had no idea.
Distance between her and the receivers with the problem: about the same
distance as you might be from the flight deck when riding in an airliner
- in fact you could be sitting within just few feet of the plane's radios
or antennas.

Also keep in mind that airliners are using more than just the 108-136 MHz
freqs we see listed on some scanners. Right of the top of my head, I can
think of the following:

ADF uses MF.
Marker beacons use 75 MHz
VHF Nav 108 to 118 (VORs and localizers)
VHF Com 118 to 136
Glidslopes (for precision appraoches) are around 300 to 350 MHz.
DMEs are 900 to 1100 MHz.
Transponders use 1030 - 1060 MHz

Oh yeah - those airphones - some are on the 450 band, some are 800.

Think about it. A lot places where you could see problems.

I thought I had a formula for finding the distance between two points on the globe given the latitude and longitude of each, but I can't find it.

Can someone tell me what it is? I'm looking for one which corrects for the varying lengths of a degree of latitude at different degrees of longitude, not the simple euclidean distance formula.

Also, is there a relatively simple solution which also accounts for the fact that the earth is not a perfect sphere? That's more precise than I want, but I'm curious.

73 de N1PBT...Ron (rrossi@vnet.ibm.com) ><>

Ron,
I had similar problem with my DJ-F1T's batter pack. Over time the battery pack got loose and kept detaching from the radio's body. After examining the pack I found that the catch was bent. So I bent it back and the battery stays on securely. Maybe all you needed to do
was a little bending and it would work fine.

In article <DDq03n.Luy@bocanews.bocaraton.ibm.com> rick_smith@vnet.ibm.com writes:
>What does typewriter maker problems and world-wide cpu shipments have to
>do with Amateur radio?

In case you haven't noticed, amateur radio has belatedly moved into the computer age. Not only do most of our radios now have cpus embedded in their control systems (often more than one), but also cpus today often participate actively in the modulation and demodulation of our signals. And amateur builders and designers have replaced the slide rule with a computer for the most part today as well. So cpus and computers are now an integral and important part of amateur radio.

>
>Bet you never use that "CW Modulator" of yours!
>
>

I don't know what the "official" definition of "modulation" is, but in my book anything with sidebands (or at least one) is modulation.

If you look at the frequency domain representation of the time-domain CW signal (Fourier transform), you get ... sidebands! Although they are much narrower than other modes, CW has them. Hence, it's modulation.

I like the idea of single-sideband CW. Maybe a good Larson E. Rapp article could come of it! :-)

The ARRL responded promptly re: JOTA '95...Attached are the details...
Thanks to those of you who responded!

Dennis - N4NR

1995 JAMBOREE ON THE AIR

MEDIA CONTACT:
American Radio Relay League (ARRL)
Educational Activities Department
Phone (203) 666-1541
Email jota@arrl.org

WHAT IS JOTA?

When Scouts want to meet young people from another country, they usually think of attending a World Jamboree. But few people realize that each year more than 400,000 Scouts and Guides "get together" over the airwaves for the annual Jamboree-on-the-Air (JOTA). Modern technology offers Scouts the exciting opportunity to make friends in other countries without leaving home.

JOTA is an annual event in which Boy and Girl Scouts and Guides from all over the world speak to each other by means of Amateur (ham) Radio. Scouting experiences are exchanged and ideas are shared via radio waves. Since 1958 when the first Jamboree-on-the-Air was held, millions of Scouts have met each other through this event. Many contacts made during JOTA have resulted in pen pals and links between Scout troops that have lasted many years.

With no restrictions on age or on the number of participants, and at little or no expense, JOTA allows Scouts to contact each other by ham radio. The radio stations are operated by licensed ham radio operators. Many Scouts and leaders hold licenses and have their own stations, but the majority participate in JOTA through stations operated by local radio clubs and individual radio amateurs. Some operators use television or computer-linked communications.

WHEN

JOTA is held the third weekend in October. JOTA 1995 will take place Saturday October 21, at 0001 hours local time to Sunday, October 22, 2359 hours local time, though some activity continues over from Friday to Monday to take advantage of long distance (DX) time differences.

HOW DO WE TAKE PART?

First, contact a local Amateur Radio operator or club to ask for assistance. If you need help finding one in your area, contact the Educational Activities Department at ARRL HQ at (203) 666-1541. Radio amateurs are enthusiastic about their hobby and most will be willing to help you participate in JOTA. The radio operator may suggest that the Scouts visit his/her station or that the operator bring equipment to your local campsite. Often, JOTA stations are set up in unusual locations, such as the top of a mountain, or on a boat. For free Girl and Boy Scout brochures, contact the Educational Activities Department at ARRL HQ.

LICENSING REGULATIONS

Ham radio operators have obtained a radio transmission license by passing an exam given by national authorities. License conditions vary from country to country. In some, Scouts may speak over the air: in others, special permission can be obtained for Scouts to speak over the radio during JOTA.

RULES

Radio operators run their stations in accordance with their national licensing regulations.

Stations should call "CQ Jamboree," or answer stations doing so. Any authorized frequency may be used. It is recommended that stations use the agreed World Scout Frequencies, listed elsewhere in this document. To avoid congestion, use close-by frequencies.

JOTA is not a contest. The idea is not to contact as many stations as possible during the weekend.

All participating groups are asked to send a report of their activities to their National JOTA Organizer (NJO) and to ARRL HQ after the event. The NJO for the US is Dan Dansby, W5URI (see addresses listed elsewhere in this document). NJOs forward national JOTA reports to the World Scout Bureau for the World JOTA Report.

Although the worldwide JOTA is organized in October, Scouts can meet on the air at other times during the year. Regular Scout nets (a pre-arranged time and frequency when operators meet) are organized nationally or regionally. An updated list of these nets can always be found in the latest World JOTA Report which is published in March.

HB9S

The World Scout Bureau operates its own Amateur Radio station, with the call sign HB9S. There is a permanent radio room in the Bureau's Geneva offices, and the station is regularly on the air during Scout nets and JOTA weekends. Transmitters are on the 10/15/20 meter, 160/80/40 meter and (in the Geneva area) the 440/2 meter bands. Making contact with HB9S requires patience, as many stations call at the same time. Please follow instructions given by the operators and do not interfere with on-going contacts. They speak in as many languages as possible.

SCOUT STATION CALL SIGNS

Each licensed Amateur Radio station has a unique identifier known as a "call sign." The first letters specify the country. Here are call signs of well-known stations that can often be contacted:

HB9S World Scout Bureau
Geneva Switzerland

K2BSA Boy Scouts of America National Office
Dallas TX

JA1YSS Boy Scouts of Nippon National Office
Tokyo Japan

PA6JAM Scouting Nederland National Station
Sassenheim Netherlands

5Z4KSA The Kenya Scouts Assoc. Paxtu Station

Gilwell Park, London UK

XE1ASM Boy Scouts of Mexico

DU1BSP Boy Scouts of Philippines

JOTA PROGRAM ACTIVITIES

Before the event:
* Send a report of your plans to local news reporters. Ask them to visit the station.

* Ask a radio operator to talk about ham radio communications. Visit his/her station to actually see how it works. Learn about radio waves and their propagation.

* Learn to say hello in other languages.

* Learn about other countries and prepare questions to ask over the air.

* Design special QSL cards for the JOTA weekend. Find a way to print cards or prepare different handmade cards.

* Build a suitable antenna and erect a tower. For ideas, refer to chapter 7 in "Now You're Talking!" available through the ARRL for $19, plus $3 shipping and handling.

* Build a simple radio receiver (send an SASE to ARRL for a list of kits).

* Learn about electricity and how to do simple electrical repairs such as how to fix a blown fuse.

* Learn and practice Morse code. Use a computer to teach the code. ARRL has a computer program that helps teach code: GGTE Morse Tutor for IBM or

compatible PCs.

* Practice talking into microphones using radio operating procedures and jargon--see examples.

* Find out about your local area in order to answer questions from Scouts in other regions.

During the Event:

* The global weather situation. Get a large wall map of the world. Ask the Scouts with whom you speak to give the local weather. Mark it on the map for the area where they are located. At the end of the weekend you will have a global weather picture.

* Determine the distance between each radio contact that you made and add them all up. Can you reach 100,000 km (62,000 miles) in one JOTA weekend?

* Learn to say "Scout" in several different languages. Use it whenever possible.

* Invite parents and other friends to visit your JOTA station.

* Organize a weekend hike and take portable radio equipment with you.

* Ask Scouts to keep his/her own personal logbook. Include names, addresses and other information for Scouts contacted.

* Set up an information section with maps, atlases and other sources. When a contact is made, Scouts can find out details about the country or region.

* Plot contacts made on a world map.

* Invite the media to your station. Ask a newspaper to take photos.

* Organize a fox hunt, where Scouts have to locate a small hidden transmitter. This can include the use of a map and compass.

After the Event:

* Write to the Scouts contacted. Establish individual (pen pal) or troop links. Send your badge and other information about your area.

* Send your reports (and photos!) to the ARRL. Maybe you'll see your picture in our magazine, QST!

* Send a report to your NJO. He'll send his national JOTA report to the World Scout Bureau.

* Start planning for next year!

EXAMPLES OF RADIO JARGON USED BY RADIO AMATEURS

Ham: An Amateur Radio operator.

Log: A written (or computerized) record with details of contacts made.

"CQ Jamboree": A request for any other JOTA station to answer your call.

QSL card: A card which gives the details of the contact, such as location, time and date of contact, etc.

"73": Ham lingo for sincere "best regards." (Used on both phone and CW toward the end of the contact.)

CW: (continuous wave): Morse code telegraphy.

SSB or Phone: Voice mode of sending messages.

Packet: Electronic mode of sending radio messages using ham radios and personal computers.

RTTY: (radio teletype): Radio signals sent from one "teleprinter" to another. What the sending operator types on his or her keyboard will be printed on the screen of the receiving station.

Shack: The room where an Amateur Radio operator has set up his or her radio equipment.

WORLD SCOUT FREQUENCIES

Band SSB (phone)
80 m 3.740 / 3.940 MHz
40 m 7.090 MHz
20 m 14.290 MHz
17 m 18.140 MHz
15 m 21.360 MHz
12 m 24.960 MHz
10 m *28.990 MHz

*Note: On 10 meters, try 28.350 MHz, where US "Novice" class licensees may participate.

Band CW (Morse code)
80 m 3.590 MHz
40 m 7.030 MHz
20 m 14.070 MHz
17 m 18.080 MHz
15 m 21.140 MHz
12 m 24.910 MHz
10 m 28.190 MHz

JOTA RESOURCES

Postcard-size certificates are free to anyone participating in any way. Order beforehand for presentation during JOTA or award later at Scout or Amateur Radio club meetings. (These are not "QSL" cards.) Send a self-addressed stamped envelope large enough to hold the cards ordered. Send requests to:

Jamboree-on-the-Air Certificate Cards
S221, 1325 West Walnut Hill Lane
PO Box 152079

Irving TX 75015-2079

Pocket patches are $2.50 each; order early.
Include state sales tax. Send to:
JOTA Coordinator, International Division
Boy Scouts of America
S221, 1325 West Walnut Hill Lane
PO Box 152079
Irving TX 75015-2079
tel: (214) 580-2000.

An account of the 37th Jamboree-On-The-Air event (1994) is contained in the "World JOTA Report." To order your personal copy, contact your National Scout HQ., or email worldbureau@scout.gn.apc.org.

From Tad Cook, KT7H
Seattle, WA August 25, 1995
To all radio amateurs

SB PROP ARL ARLP036
ARLP036 Propagation de KT7H

Average solar flux was unchanged from last week. The geomagnetic field was quite stable, with A indices in the single digits and the K index often at zero. Solar flux is expected to rise gradually and only slightly into the mid 70s over to the next couple of weeks, and then drop off to around 70 or below. There may be an upset due to coronal holes around September 5 and 6 and again on the 9th through the 11th.

The exciting news recently was that the first sunspot of the next solar cycle was detected. Although we are probably a year away from the minimum of solar activity between the two cycles, the first sunspot of cycle 23 has just been observed. The spot is identified as being part of the next solar cycle by looking at the magnetic polarity of the sunspot.

Sunspot Numbers for August 17 through 23 were 36, 0, 12, 13, 0, 11 and 11, with a mean of 11.9. 10.7 cm flux was 69.8, 71.9, 71.6, 71.3, 71, 70.3 and 74.3, with a mean of 71.5.

Email jota@arrl.org

WHAT IS JOTA?

When Scouts want to meet young people from another country, they usually think of attending a World Jamboree. But few people realize that each year more than 400,000 Scouts and Guides "get together" over the airwaves for the annual Jamboree-on-the-Air (JOTA). Modern technology offers Scouts the exciting opportunity to make friends in other countries without leaving home.

JOTA is an annual event in which Boy and Girl Scouts and Guides from all over the world speak to each other by means of Amateur (ham) Radio. Scouting experiences are exchanged and ideas are shared via radio waves. Since 1958 when the first Jamboree-on-the-Air was held, millions of Scouts have met each other through this event. Many contacts made during JOTA have resulted in pen pals and links between Scout troops that have lasted many years.

With no restrictions on age or on the number of participants, and at little or no expense, JOTA allows Scouts to contact each other by ham radio. The radio stations are operated by licensed ham radio operators. Many Scouts

and leaders hold licenses and have their own stations, but the majority participate in JOTA through stations operated by local radio clubs and individual radio amateurs. Some operators use television or computer-linked communications.

WHEN

JOTA is held the third weekend in October. JOTA 1995 will take place Saturday October 21, at 0001 hours local time to Sunday, October 22, 2359 hours local time, though some activity continues over from Friday to Monday to take advantage of long distance (DX) time differences.

HOW DO WE TAKE PART?

First, contact a local Amateur Radio operator or club to ask for assistance. If you need help finding one in your area, contact the Educational Activities Department at ARRL HQ at (203) 594-0200. Radio amateurs are enthusiastic about their hobby and most will be willing to help you participate in JOTA. The radio operator may suggest that the Scouts visit his/her station or that the operator bring equipment to your local campsite. Often, JOTA stations are set up in unusual locations, such as the top of a mountain, or on a boat. For free Girl and Boy Scout brochures, contact the Educational Activities Department at ARRL HQ.

LICENSING REGULATIONS

Ham radio operators have obtained a radio transmission license by passing an exam given by national authorities. License conditions vary from country to country. In some, Scouts may speak over the air: in others, special permission can be obtained for Scouts to speak over the radio during JOTA.

RULES

Radio operators run their stations in accordance with their national licensing regulations.

Stations should call "CQ Jamboree," or answer stations doing so. Any authorized frequency may be used. It is recommended that stations use the agreed World Scout Frequencies, listed elsewhere in this document. To avoid congestion, use close-by frequencies.

JOTA is not a contest. The idea is not to contact as many stations as possible during the weekend.

All participating groups are asked to send a report of their activities to their National JOTA Organizer (NJO) and to ARRL HQ after the event. The NJO for the US is Dan Dansby, W5URI (see addresses listed elsewhere in this document). NJOs forward national JOTA reports to the World Scout Bureau for the World JOTA Report.

Although the worldwide JOTA is organized in October, Scouts can meet on the air at other times during the year. Regular Scout nets (a pre-arranged time and frequency when operators meet) are organized nationally or regionally. An updated list of these nets can always be found in the latest World JOTA

Report which is published in March.

HB9S

The World Scout Bureau operates its own Amateur Radio station, with the call sign HB9S. There is a permanent radio room in the Bureau's Geneva offices, and the station is regularly on the air during Scout nets and JOTA weekends. Transmitters are on the 10/15/20 meter, 160/80/40 meter and (in the Geneva area) the 440/2 meter bands. Making contact with HB9S requires patience, as many stations call at the same time. Please follow instructions given by the operators and do not interfere with on-going contacts. They speak in as many languages as possible.

SCOUT STATION CALL SIGNS

Each licensed Amateur Radio station has a unique identifier known as a "call sign." The first letters specify the country. Here are call signs of well-known stations that can often be contacted:

HB9S World Scout Bureau
Geneva Switzerland

K2BSA Boy Scouts of America National Office
Dallas TX

JA1YSS Boy Scouts of Nippon National Office
Tokyo Japan

PA6JAM Scouting Nederland National Station
Sassenheim Netherlands

5Z4KSA The Kenya Scouts Assoc. Paxtu Station
Nyeri Kenya

My Newark catalog seems to have sprouted legs, however, RS Electronics
carries Bud racks and shelves. Their Grand Rapids number is 800-776-1155.

Sure, as long as you aren't coordinating an investing club or otherwise
communicating for profit, you can talk about anything you like, it's a
free country.

Since nearly all HF rigs today are synthesized too, the point is rather moot. They *all* have synthesizer noise. The older VHF multimodes, and the older HF rigs, had much noisier synthesizers than some of the newer rigs, however. Analog VFO rigs are *generally* quieter, though some of them can be pretty bad too.

>No hams USE a bloody carbon mike.

If you don't like carbon mikes then how about a $1 crystal mike
and a $0.20 Op Amp to modulate that single transistor transmitter?

I'm not pulling your leg. In the past, telephones used carbon
microphones and that's where a lot of hams got theirs. We used them
for single/double tube AM and FM transmitters. I still have some in
my junk box. If the FCC allowed new hams to use FM, I guarantee you
there would be a lot of new hams on FM with transmitters no more
complex than CW transmitters. Why do they subsidize CW? Why don't
they allow freedom of choice of modes?

>How did you ever get a ham ticket?

When you were still in diapers, my parents drove me 200 miles in a '46
Chevy with no AC to the nearest FCC office in Houston where I passed
with flying colors in front of an FEE examiner and became W5DXP.

I recently picked up a DJ-580 Alinco hand held (dual band).
(2m/70cm).
I'm not at all impressed with the short rubber duck that came
with the radio.

Any folks out there have recommendations from personal experience
of other brands, rubber duck or otherwise, that might provide
better service?

>Actually, they can put you in jail. They CAN call the FBI.

Since you're so certain that it's a criminal violation of federal law,
can you cite the law? Or, if it's not a statute, where's the Supreme
Court decision holding this?

If you're violating your agreement with the carrier, it's a breach of
contract, and entirely a civil matter--that is, they can sue you for
whatever damages they think you've caused. Even if federal law
provides for the cause of action in this case, there's no criminal
offense in breaking a contract--you're just liable for any damages.

I tried the "ANLI" dual-band ducky. It seemed to work fine untill I
dropped the unit about 2 ft on the duck. The center pin of bnc snapped
off and stayed in the HT. This was on a long trip and I couldn't put on
my rool-up J-pole, untill I found some needles to pick it out with.
This time I'm going with the LARSON. Costs more (25.00) but has good rep.

John, N0KIC

3441. Windows 95 - You need a license...

Newsgroup: rec.radio.amateur.misc
Date: 1995-08-25 00:00:00 UTC
From: richm1110@aol.com
Message-ID: <41l9ph$fkl@newsbf02.news.aol.com>
Source record: 239859

What a great deal of fun we (I) had loading the Windows 95 Program. The recommendations on the side of the box stated the requirement for hard-drive space ran between 35-40 megabytes, depending on applications installed. What the box did not tell, was that the program, was going to create a backup file of the old Windows and DOS back to the hard-drive only. In my application, this meant that another 14 megabytes, give or take a byte, was going on the hard-drive as backup. Up to 55 megabytes would be required to install the new program.. Drive C:\ on my old, 386 max's out a around 101 megs. My system has an addition 285 megs on a secondary drive D:\. I was fortunate to be able to move programs to the secondary drive and reallocate the Window Group/Icon properties before attempting an installation of the new 95 program files. The New 95 interface will allow you to create (short-cuts) to program files. This process allows the user to add an Icon to the Desktop making accesses easier and faster to the launch. You could launch a .txt file, .doc, .xls and etc from the 3.xx Windows File Manager, by creating an association from the file drop-down list. I had a problem creating an association to the a New Icon moved to the Deck Top for 95. This short-cut would launch, MsMoney v3.0. I'm also lost on how to change Icon and Text Names connected to Icons on the Desk Top. The new version of MsMoney, downloaded free from Microsoft's Web Page, was less than desirable. " If it's to good to be true -- It probably is". This program was free for the taking, since it's not worth the powder to burn. It was able to open the working file from it's earlier version, with some difficulty. Difficulty that corrupted the original file. Don't ask me how that happened. It took some effort to recover the old file. The dealer I purchased the new Windows 95 from mentioned that the Anti Virus program (vsafe), was eliminated from the new operating system. Surfing the net, meant I needed new software to protect my system from attack. I purchased Norton AntiVirus for Window 95 for the sum of $100, to find that vsafe was still active in the new 95. There is no mention of vsafe or memmaker in any of the accompanying manuals. These files can be found using the search (find) feature on the Start Button of Task Bar. Over all the setup difficulties for the New Windows 95 Operating System, I think it will be a winner. Control over the program will require thicker manuals and a little study.

Perhaps this is not a real Amateur Radio issue. Yet, there are going to be a lot of people showing increased bandwidth between the ears, creating a great deal of harmonics.

Regards
Good Luck on your upgrades:)

I hope to locate a woman ham, at one time: W9WWP.
I am almost 78 now. When I was 19 as W9PTU I contacted W9WWP
in Chicago several times. Her name then was Carol Anne Keating.
I worked the summer of 1937 in Chicago and took Carol to movies
a couple of times. That was my last contact with her.
Later I read in QST that she was active with women hams and was
then located in San Diego and had a W6 call sign, but I don't know
what it was. I suspect she lives in San Diego.
With this meager information is there anyone who can help me?
If so please e-mail me at: us007305@interramp.com

You're right Zack, and it just occurred to me how CW operators can
conserve bandwidth. 30 wpm CW occupies a lot more bandwidth than
5 wpm CW so, in the same spirit that limits digital modes to 300
baud, don't you think think CW should be limited to 5 wpm? :-)

Free - Latest Release of Macintosh TCP/IP software for Amateur Radio

version NET_Mac2.3.54

For those who don't know NET/Mac... NET/Mac is the application that
supports TCP/IP over packet-radio, which means, that hamradio operators
can use NET/Mac for their wireless TCP/IP network...

In this version of NET/Mac the following mods/features were implemented:

- 'netmacicons' now also defines the icontype of 'source'-files
- <hostname>.<domainname> is now the same as <hostname>
- Added a mailfile-size-limit to the popmail command
- Added command 'domainname'
- Some cosmetic mods for netmacicons
- NET/Mac does NOT support the new Buckmaster CD-ROM's HAMCALL
database yet... I am trying to convince Buckmaster that I need
the new data-encryption-method, but as of yet they are not ready
to release a description of the encoding-algorithm...
The old CD-ROM's remain fully supported...

This version obsoletes all versions of info-mac/comm/radio-net-mac in
the Sumex-Aim.stanford.edu (and it's mirror-) archives.

The new NET/Mac has (hopefully) been uploaded to:

- oak.oakland.edu, to the directory /pub/hamradio/mac/digital
- ftp.ucsd.edu, to directory /hamradio/packet/tcpip/incoming.
If it's not there (anymore), then look at /hamradio/packet/tcpip/mac.
- hamster.business.uwo.ca, to directory /pub/amsoft

NET/Mac includes interactive HELP if you are just starting out. I also include
a TCP.FAQ (Frequently Asked Questions) that even includes names and addresses
of regional gurus and a "by the numbers" list of what you do to get
operational.

Send me (1) one formatted disk and a *self addressed and *stamped disk mailer
marked TCP/IP... 800k or 1.4 Meg disks are OK but they MUST be formatted.

For the minimum expense and good results, use an audio filter. You can
build them with op-amps (fixed frequency) pretty easy or the easiest are
the switched capacitor filters. Linear Technology (Milpitas, CA) just
announced a new 8th order bandpass filter that should work great for
your application.
It is exceptionally quiet and can be used with a small post amplifier
for a "killer" audio filter.

Good point, but why would there be so much interest in modifying the
equipment to receive these calls, if not to listen?

What amazes me more is the number of people who are interested in listening
in on the phone calls of people they don't even know. In fact, I could care
less what my friends and neighbors have to say on the phone.

Message-ID: <41l99c$pql@watnews1.watson.ibm.com>
Source record: 239874

Hello,

I am interested in using some form of digital communications
over large distances (across the Atlantic, for example). Satellite
technology is a bit expensive for me, so I was wondering if anyone
has tried packet radio with a SW link (using SSB-SC or DSB-LC)?
If so, what sort of speeds (bps per channel) are practical?

I have looked on web sites and FAQs, but I haven't found much
relating to SW. Can anyone in NetLand(sm) help?

Cheers,
T.D.

What a crock!

The phone companies are ripping us off. Back when they had to string wires they at least had some justification for outrageous behavoir.

The rates are soooo over charged that they can afford to give away hundreds of bucks in phones just to sign you up for a year.

I have a ohone for my wife to keep in the car in the event of emergencies. Fortunatly she has NEVER used it. Every year I cancell and sign up with some other carrier. I have a box of phones. The whole thing sounds like the 1960's when the phone police would break down your door because you had an illegal extension.

3459. This Week in Amateur Radio #126 (for air through 9/1/95)

Newsgroup: rec.radio.amateur.misc
Date: 1995-08-25 00:00:00 UTC
From: "Stephan M. Anderman" <sanderman@delphi.com>
Message-ID: <B7IhLf3.sanderman@delphi.com>
Source record: 239877

Here is a summary of news items covered on edition #126 of
"This Week in Amateur Radio", North America's satellite-delivered
audio bulletin service, for the week ending 1-Sep:
-
1. ARRL Files Reply Comments on FCC Rule Making Initiatives
2. Sunspot Sighting Could Indicate Early Beginning of Cycle 23
3. FCC Seeks to Downsize with Office Closings and Layoffs
4. Results Announced in Recent ARRL Section Manager Elections
5. Amateur Activity Aboard MIR-19 at a Low Ebb
6. "Gateway 160 Meter Net Report" with Vern Jackson, WA0RCR
7. "Amateur Radio Newsline" - Edition #941 from Los Angeles
8. Upcoming Special Event Stations with George Bowen, N2LQS
9. Easter Island Satellite DXpedition Planned for Next Month
10. ARRL in Possession of Requests for Packet Use at 219 MHz
11. League Files Comments with FCC on Amateur Use of 40 GHz
12. Time Change Announced for "This Week in Amateur Radio"
13. "The RAIN Dial-up" from Chicago
14. Weekly Propagation Forecast
15. Expanded Schedule of Special Event Stations
16. Financial Support for "This Week in Amateur Radio" Dwindles
-
Satellite time and uplink equipment have been provided by SKYVISION
as a service to the amateur radio community. Funding to access
"Newsline" was provided by a grant from the Stoddard family and
users of the KF9MP repeater system in North Webster, Indiana.
-
"This Week in Amateur Radio" is a weekly amateur radio news and
information service, in audio newsmagazine format, which is produced
by Community Video Associates, Inc., a New York State not-for-profit
corporation based in Albany, New York. The program is carried on
the "Tech Talk Network" each Saturday at 7:30 PM (EDT) on the
Telstar 302 commercial communications satellite, transponder 21
(11V), 5.8 MHz wideband audio (4.120 GHz), located at 85 degrees
west longitude in geosynchronous orbit, and can be heard on various
VHF/UHF repeaters throughout the United States and Canada, as well
as on 160 meters at 1860 kHz. Contact your local amateur radio club
or repeater operator if "This Week in Amateur Radio" is not being
heard in your area.
-
Production and transmission expenses are underwritten by
contributions from repeater system operators, amateur radio clubs,
and individuals. For further information, contact George Bowen,
N2LQS, at 518/283-3665, or Stephan Anderman, WA3RKB, at
518/664-6809. You may also reach them via amateur packet @

WA2UMX.FN32AW.ENY.NY.USA.NA or on the Internet to KXKVI@DELPHI.COM
or SANDERMAN@DELPHI.COM.

3460. Re: This week in Amateur Radio should report about...

This is from the gentleman who spent a lot of energy trying to
convince me I'm rude and arrogant?

>DM>Sending a digital code by varying the amplitude of a 10W carrier between
>DM>very near 0 and 10W is indeed amplitude modulation; in fact, it is
>DM>exactly like amplitude modulating the carrier with a baseband
>DM>digital signal filtered to remove the upper harmonics.
>
>Bet you never use that "CW Modulator" of yours!

Actually, I operate Morse CW almost every time I'm on HF, which
admittedly isn't often enough.

As for "Morse code isn't modulation", no amount of name-calling
and ridicule is going to change the facts: Morse code sent by
on-off-keying is a form of AM. Tell me this is pure horse poop
all you want, but it is true.

Are you just being obstinate for fun?

Check out Phillips. I tossed their news letter on Wednesday, but I remember an article about an RF-powered Phillips IC used by several European automobile manufacturers as a theft deterrant. The unit could read and be written to!

Curtis Wheeler (cwheeler@ccnet.com) wrote:
: >But by persistence, you will find out that is IS entirely legal, ethical,
: >appropriate, and being done by informed consumers of cellular service
: >nationwide.

: >FIRST HAND user of two phones on the same number, with FIRST HAND
: >blessing of Southwestern Bell Mobile Systems.
: >
: >Now, lets get back to amateur radio......
: >

: It would be legal and ethical when you "have the blessing" of your
: carrier.

: One could infer from MacGuyver's spam, that he was offering a service
: that does not involve the carriers. And the carriers have grounds, as
: the system licnesee, to prohibit a user from cloning a phone.

: Note the following: Your cellular carrier is the "control operator" of
: your cellular telephone (using terminology comparable to amateur radio -
: which is the only service even partillay understood by some in this
: group). You can place calls on it but you do so under the authority of
: the carrier's licence - they maintain effective control of the mobile
: radio.

: Yes, there would be a service charge for this - I can hear the griping
: already, "Why should I have to pay for a second phone on the same
: number?" If you're trying to compare your cellular service to your home
: telco service, where you can add extensions - don't waste your time.
: Cellular operates under a different set of rules and technology that
: makes such a comparison one of apples and oranges.

: --
: Curtis Wheeler - Pleasanton, CA

Give us a break Curtis, we're not morons. What's your beef with some of
us getting a second phone on the same number without the highway robbery
rates that cellular phone companies charge.

Consider first, that you are the OWNER of the phone. Secondly, the
cloning was done with the explicit permission of you, the OWNER of the
phone.

Thirdly, the cellular company CANNOT tell the difference between the
cloned phone and the original.

So WHERE'S THE BEEF ?????

Perhaps if you are in the unfortunate position of living in an area where the company doesn't want you to clone, I would recommend you change cellular companies, or IGNORE THEM !

Who's paying the bill ?! YOU ARE ! Rememer, YOU ARE THE PAYING CUSTOMER. They'll give their left ball for new customers, and sometimes I think they only have one ball! Remember, these are the folks who (outside of CA) give retailers $300 a pop to sign up a new user by subsidizing the purchase of a new phone.

What can they do to you Curt? Spank you? Beg for mercy ? Call the IRS ?

The WORST they could do (and would be fools to do) would turn off your service. So, use the other carrier.

Furthermore, your friend , as in all other posts here, is an employee of the company. Just what did you expect Curt ? Duh, sure, go out and clone a phone so we can't bill you another $49.95 every month ?

Have some hormonal fortitude, and go ahead and clone your cellulars, men. Don't be submissive to BS third hand anecdotes. I've done it !!!
It's not illegal to clone your own phone. The phone company cannot tell the difference as long as only one is on at a time. They will not whip or spank you.

I feel like MCI billboard....let's keep a running tally of how much I have saved compared to what Curt suggests... Hmm 21 months x $30 = $630.

Heh! I can get that az-el rotor for the sats now!

Before being so "amazed", try to get your facts straight:

For the 10,000th time... is NOT illegal to own a scanner than can receive ("pick up") cellular frequencies... it is NOT illegal to modify your scanner so it can receive cellular frequencies.

It is illegal to actually LISTEN to cellular phone calls, but owning the equipment is not, but like owning an amplifier that is capable of 5000 watts output is not illegal, but USING it on the ham bands at 5000 watts IS illegal.

Finally, since April 1994, no new scanners covering the cellular frequencies will be FCC Type accepted for manufacture or import. However existing scanners were NOT affected.

Frank,

Pin 1 - Mic audio in, also has about 8 volts D.C. on this pin for mic bias.
Pin 2 - 8 volts D.C. @ 50 mA for powering mic amps.
Pin 3 - frequency Up/ Dn, ground it scans up, ground thru 470 ohm resistor
it scans down
Pin 4 - No connection
Pin 5 - PTT
Pin 6 - Chassis ground
Pin 7 - Mic audio ground, ok to jumper to Pin 6 too.
Pin 8 - May be No connection or speaker audio. can not remeber.

If radio has RED Led display it requires a preamplified mic, the 25A with
the green Led display was able to use the electret (spelling ?) mics.

Hope this helps,

73' Gary KF7XV

3475. Re: Is Candian Ham lisence valid in USA?

Newsgroup: rec.radio.amateur.misc
Date: 1995-08-25 00:00:00 UTC
From: tigger@jcomm.uoregon.edu
Message-ID: <41jufh$o93@maureen.teleport.com>
Source record: 239932

Part 97.7 (Control operator required) states: When transmitting, each amateur station must have a control operator. The control operator must be a person who has been granted an amateur operator/primary station license, or who holds an unexpired document of the following types:

a. A reciprocal permit for alien amateur licensee (FCC Form 610-AL)

b. An amateur service license issued to the person by the Government of Canada. The person must be a Canadian citizen.

In other words, if you are a Canadian citizen - yes, you can operate in the U.S. of A.

Hope this helps.

You sound like a cheap lawyer...
WHY would a person get the info and go thru the trouble of conversion and then NOT listen?...
BTW, I did convert mine.. Just required the snipping of one resister.. Listening to cell-phones is BORING.
You hear one side of the conversation and then only a portion of that when the person moves to another
cell.

Zl> with FN22 or FN23 to get to 15 grids
Zl> from FN33KD/KE. Lots of LOS paths in
Zl> New England from a 3800 ft Mountain.
Zl>

I wanted to quote the entire message, but also needed some views from those who have quite a bit experience with Kenwood Multi-Bands. I am considering the purchase of Kenwood's TM-742A dual band mobile.

Have you experienced any problems with it?

How the power output? Doe it perform at rated specs?

Have any problems with unstable/unbalanced circuits causing failure of the power transisters?

Also, is anyone aware of amps that cover both bands (2m/70cm)? I've looked through various catalogs, but have only seen amps that are specific to either 2 meters or 70 centimeters, but not both. I travel frequently (most times in the boondocks) and was hoping there was a dual
band amp in the area of 100-300 watts PEP. Cost wasn't the main concern, but neither do I want to purchase at $700 each two different amps. That's a heafty chunk of change!!

Thanks in advance for your assistance and experience.

I would appreciate hearing from anyone who has had any success with
the Icom CT-17 serial radio remote control (or a home-made version),
especially concerning the reading and setting of PL tones into
memories.

All the CT-17 does is convert TTL to RS-232 using a MAX-232 chip.
It is a high price level conferter.

The rest is up to the computer program you use or write and the
type of ICOM radio you have.

You might need the ICOM CI-V reference manual.

Reply direct with radio type for more info.

>(Unless you *want* motor assist on the hills, of course.)

My experience with bike generators is that they are horribly inefficient
create a LOT of drag, and chew up the tire sidewall. Once upon a time,
30 years ago, I saw a generator that rode on the inside of the rim with a
relatively large 3 inch rubber wheel. I think it was a modified Whizzer
part.

>
My solution is an external battery. I use a Makita 9.6 volt power tool
battery carried with the HT in one of those Ski Patrol chest slings. The
battery gives great live and more power than the stock ICOM pack, but it's
a bit uncomfortable. There's lots of places you could tuck a Makita
battery on a bike, and if you own a Makita drill, you probably already have
a rapid charger.

this is a problem with cloners -- they don't have precise design data to work with nor a chance to get that information before they need to have product out so they have to measure some samples and go from there. if they got a set of radios that are "off" in a direction, their products will be "off" in the same direction or probably worse.

same sort of thing can happen to OEM's as well..just that they should have more control over their vendors and processes than someone trying to duplicate a work by measuring a few samples.

>== Discontent is the first step in the progress of a man or a nation.

sure -- with respect with other stuff that's going to be on the aircraft.
3 vhf coms, 2 vhf navs/localizer receivers, 2 dme, 2 transponders, 2 adf,
2 GPS, 2 marker beacon receivers, 2 glideslope receivers, 2 HF radios...and
i might be forgetting something.

add to that autopilots that run off that data and have servo loops out to the
servo systems that actually move the control surfaces..and i'm only covering
the avionics here...there's more than that running the plane. electronic flight
displays, air data computers, flight management computers, pa systems,
cabin pressure controls, engine controls...all are computer operated in the modern
aircraft...and there's lots of wire between them and there's data busses hooking
it all together.

things like an IAPS rack concentrates a lot of stuff in one place, but that also
ties you to a vendor...some folks want to be able to mix and match between
Collins, Sperry and Bendix on demand and that means lots of separate boxes
spread all over the plane.

got some where they com and nav radios are in places like the wheel wells
because that's the only place where there was room left.

if you get a chance, you should swing by the airport and see if it's possible
to be given a look at what a wiring harness looks like in the modern plane.
even the small planes get data busses these days and there's still plenty
of wire to fill every nook and cranny...

and you want us to make 'em so they will also work with any random
equipment that comes along? the big problem today is making all that
resistant to broadcast stations in the 100kW and up range...and apparently
some idiots around the world have decided it's a good idea to put high
power broadcast stations at airports....so you have things like a 107.9 MHz
megawatt transmitter at an airport that has an ILS in the low 108's...

ok, everyone talks about this. what is the difference between that and just
making a new program item in the program manager for your application.

in OS/2 things work like this by default (if you've associated the right
application with the right extension...8)) mac is similar. the windows
file manager also knows about association so you could start a program
needed to use a data file by associating the extension to the program and then
you could start the program..

>Over all the setup
>difficulties for the New Windows 95 Operating System, I think it will be

Well it is the most unique band of the entire spectrum :-)

Propagation lies between HF and VHF, however whereas 10 meters
often stays quiet during summer short skip, there is a lot of activity
on "the magic band" in many places. During the sun spot maximum,
when 10 m openings are something normal, they are stil something special on 6.

And there are no multiple hop Es transatlantic openings (as yet) on two.

It does hibernate though.

>appreciate any help on this !

6 meters is a unique band in that it blends the skywave propagation of
10 meters with the line of sight propagation of 2 meters in a somewhat
unpredictable way. It's an exciting band mainly because you never know
what you're going to be able to work from hour to hour. For the code
test free Tech, it's the only band that offers frequent skywave propagation.
And, it's the nearly ideal band to do meteor burst communications because
the frequency is a good fit with the meteor trail ionization levels.

Nope, the frequency components due to the dit length are lower than
those due to the edges, so while the former will increase in frequency
at higher wpm it's the latter that determine the bandwidth.

It's easy to change the text name of the icon on the desktop. Simply
double click on the text and you can edit it right on the desktop!
Pretty slick. However, I am still trying to figure out how to change
the icon of an item on the desktop. Anybody know?

Yes it is OK to talk about stocks on the air. You are not doing anything commercial in nature.

> a limit to what can be sent.

Of course, you're both right. The higher the frequency of transmitting the switch-on and switch-off edges, the more energy that will go into the sidebands per unit *time* (as opposed to per unit character) and by definition, that means more sideband power at higher keying speeds. Thus you might consider that a higher keying speed causes greater bandwidth or merely a greater "depth of modulation". If you define bandwidth as the distance from the center frequency at which the power is down say 25dB from the unkeyed level, then the increase in character rate will increase bandwidth as so defined.

Why are 800 MHz cellular phones forbidden on air carriers when
the same airline offers cell phone service to its passengers using
a credit card? Any logic here?

A cynic would say that the logic is that the airline wants to make
money. However, there's a technological consideration as well. When
you're on an airplane, you have a 30,000' high antenna, and can see
lots of cells, with the attendant possibility (or, more likely,
probability) of interfering with all of them. On the ground, you're
only in range of, at most, a few cells, and they can deal with this.

The Airfone is somehow a different system.

Colin Smith (Colin@radioham.demon.co.uk) wrote:

: Does anyone know the 'common' UHF/VHF frequencies used by
: covert radio surveillance transmitters (bugs)?

Well i dont know about 'common' freqs as i would imagine that
is something set by the person that puts them together. I
have heard that your el'cheapo bugs such as the one im
talking about below are down lower in freqs where the more
'pro' bugs you might buy from security ppl are up over 1gig.
I dont know though for sure..

: I would also be interested to hear from anyone who has
: picked up such a bug in a 'sweep'.

I made a bug about a month ago for something to do and
set if so it was above our standard FM range, so it TX
on about 128.4 mhz. It carried a clear signal for about
150m which wasnt a bad effort i thought.

After i got it going i thought i would scan a range well
on either side of 128.4 and i found that the bug was also
TX on several other freqs higher and lower (~60mhz, ~115mhz,
~124mhz and another higher aswell, but i forget now)..

This is the only bug i have ever heard and i produced the
thing as an experiment more or less. Another guy posted an
interesting article several months back saying that he
had stayed in a hotel over there in the US and he picked up
bugs on tables and in rooms...

Anyway hope thats interesting for you..

Catch ya,
Woody

To me the idea man does not have to be perfect. He just has love and respect himself before he can love and respect another person. I think the idea man does not have to be a arnold swartzanerger or how ever you spell his name. I think the idea man should have a job and be happy with his job. To me he does not have to a hunk he just has to love me for who I am. It really is not that hard to find the right man but sometimes I think that women in general are looking for their idea man when sometimes he has been their right there all a long.

For: Emergency Management Agencies via Amateur Radio
Info: Communications Volunteers in Government Service
Info: Amateurs U.S. (@usa:Information), ACS, CAP, MARS, RACES
By: Auxiliary Communications Service (ACS), the volunteer
communications reserve of the State of California
Governor's Office of Emergency Services

Bulletin 393 Release date 8/28/95
MGT - Volunteers-Images & Issues 6/7

Characteristics of today's professional communicators continued:

- They know you might pay them to do what they do if you could
(so long as it does not conflict with FCC regulations, etc).
They might not accept it, but would appreciate the thought and
the trust.
- When they do a good job you may pat them on the back, but
they don't expect to make a big to-do about it. It they
foul-up they expect you will call them into your office and
have at them as you would any paid subordinate.
- Given the right combination of talent, trust and rapport,
the Radio Officer may become your 'alter-ego' (i.e., second
self.)

>From these characteristics can you see the benefits they provide?
Once a part of your agency, they amplify you many times over.
They extend your entire staff. They are much more than message
handlers operating a radio. Sure, there may be some need for an
operator to man a communications system component, but that may
be minimal in some agencies; albeit it is a potential that IS
important to consider in emergency planning. The astute manager
realizes that and builds that into the program in such a way that
both sides of the equation are fulfilled.

Don't be afraid of ANY volunteer who threatens to pick up his or
her toys and go play somewhere else. 'Fine, be my guest! Don't
let the door hit you on the backside on your way out!' Let it be
known at the beginning that they are working for you. Not because
they HAVE to, but because they WANT to. With proper recruiting
and stating this up front, let them know "who we are, what we do,
how we do it as a team" and any problems can be greatly reduced
or eliminated.

(This series on volunteers is for the government emergency
services agency manager. Continues, next week)

It's the difference between equipment that's part of the airframe or installed in the aircraft and equipment that is brought on board as cargo or by passengers. The on board telephone service has been tested and approved and proven not to interfere with the avionics.

Same goes with flammable liquids, wet batteries, flare guns, compressed gas bottles, and so on. Forbidden as cargo, but aboard every flight!

The bottom line is there is a reason, and we just have to live with it.

3518. MFJ 949D Question

I think the whole license structure needs to be reexamined. It is silly to force people who only want to do things like packet radio, slow scan TV, etc to learn Morse Code. On the other hand you may want to restrict some bands to code only for people who want to communicate that way. We already have no-code technicians anyway.

Something like:

Computer Class - All bands packet, voice on most bands
Telegrapher Class - All bands voice, code on code restricted bands

This could easily be remedied in the law that would limit hams to
5 wpm CW. A limit could be specified for sidebands that would obsolete
all the present equipment and only allow slow rise and fall times
thus conserving spectrum and allowing more CW QSOs in the available
bandwidth. Sort of like outlawing spark because it was too wide. :-)

The other thing to keep in mind is that a lot of the newer planes use fly
by wire - electronic signals sent to the mechanical moving parts to
control the aircraft. The wire bundles run throughout the plane either
overhead or along the outside walls, even down the middle of the floor.
Most of these wires are not shielded so disrupting small digital or analog
signals don't require a whole lot of RF.

One more comforting thought is that the lowest bidder got the contract to
build most of the parts.

I suppose you might have a point there. But wouldn't folks engineer systems
that aren't that susceptible to interference?

Message-ID: <1995Aug26.042426@vax1.mankato.msus.edu>
Source record: 239835

Hello, I have a Motorola M216 VHF 45 watt radio, and a MaxTrac 16 channel, 45 watt radio. The appear functionally the same, yet they take different programming software. Can anybody shed light on the differance? Or is this just a marketing ploy from Motorola?

Thanks for any info you can offer.

>5 wpm CW so, in the same spirit that limits digital modes to 300
>baud, don't you think think CW should be limited to 5 wpm? :-)
>
I think you've hit on something, Cecil. Since 300 baud is equivalent
to 250 wpm, we should limit both on-air transmission and testing to
below that speed. A very good idea, since I really have trouble
getting above 150 or so...

BTW, for a given rig 30 wpm does *not* occupy more bandwidth than 5
wpm, because the shape of the leading and trailing edges is the same in
both cases.

I have no problem replacing the code with a tougher written test, I just did not include that subject in my post. So there.....<g>

Dits and Dahs are two different sounding tones, or so I am told. They sound identical (most of the time) to me when I am listening to my shortwave receiver. I can transmit the code (with an iambic[sp?]) keyer, but I'd have on hell of a time trying to answer someone who is trying to transmit to me.

The latter is a very defensible >position (one I'm in large agreement with myself), while the former >is...well, you decide.

I support dropping irrelevant or obsolescent requirements whether they are replaced or not. Since I consider the Morse speed tests obsolescent in meeting a legitimate government regulatory role, I favor dropping them. However, I also support bolstering the theory requirements for entry into amateur radio whether anything else is dropped or not because I think the current ones inadequately meet the government's legitimate interests for licensing amateurs, IE mitigating the harm an applicant might otherwise inflict on himself or others through the misuse of radio transmission technology. I don't see the two positions as linked in any way.

>BTW, I'm curious how tone deafness (inability to match pitch?) affects >learning the code?

It shouldn't, unless there is more than one signal present of differing pitches. Then it could really play hell with trying to figure out what is being sent. So tone deafness shouldn't impact learning code for a test, but it might seriously affect use of code on the air, thus making the value of the test rather moot.

A more serious problem is the inability to separate tones by temporal duration, a rhythm deficiency if you will. Some people suffer from that, and dots and dashs sound the same to them. One accomodation that can work for such people is to fsk shift dots and dashes since tone deafness and rhythm deficiency rarely occur together. That can get them through a test, but again is rather useless on the air, and thus once again renders the value of the testing moot.

We must assume that code speed testing has some legitimate on the air purpose, otherwise it is just makework and hazing and not to be countenanced on a government exam. At one time, that purpose was to allow safety critical services to tell an interfering amateur to cease transmission when the safety critical service's sole means

to do so was the Morse Code. That time has passed.

When that was still a valid requirement, however, the safety critical service needed the ability to work *any* amateur, not just ones who had passed especially fast Morse speed tests, so there has never been a legitimate need for more than one level of Morse speed test. In the early years of amateur radio, the FRC thought that speed should be 5 WPM. As the need for Morse has become less pressing and relevant, for some unexplained reason the speed requirements have risen for some amateurs, but not for others. That would seem to indicate that the speed tests no longer serve a safety critical need, but rather are used for other purposes, perhaps illegitimate ones.

3538. Re: Unblocking a Kenwood

Newsgroup: rec.radio.amateur.misc
Date: 1995-08-27 00:00:00 UTC
From: turner@safety.ics.uci.edu
Message-ID: <41r16v$hu9@safety.ics.uci.edu>
Source record: 239688

I did not focus on the real point in my last post. The real point is:
under immediate emergency where life or property is threatened,
and normal lines of ham communications are ineffective, Part 97,
Subpart E specifically allows the ham to use "
any means of radiocommunications at its disposal".....

Therefore it is NOT always illegal to USE non ham frequencies. The
"illegality" of modifications has been beaten to death in other threads,
and there is no law against modification of my radio to do anything
anyway.

This is not to be taken lightly, there are anecdotes about hams losing
their radios for using other frequencies, but in an emergency I
certainly intend to use "any means of radiocommunications" at my
disposal with my HT and GET HELP. I'll deal with proving the emergency
later, the first thing is always the health and safety of whoever I
am with, or me!

The ham.cop attitude exhibited by the "you can't modify your radio"
crowd may prevent a naive ham, one who has not read and understood
the rules, from getting necessary help in a true emergency. It is
true that you might also prevent some bozos from giving ham radio
a bad name when they jam other services, but at the expense of
possible lives in the event of a real, true, live emergency?

What would be better ? A Triband BEAM(10-15-20m) at about 25' or a Windom at about 40' ? The Beam would have a rotator PLEASE, I am just considering my options at this point. I KNOW that my question is vague and difficult to answer.

OR .... How about this...
A BEAM at about 25' or a VERTICAL (GAP,R5,Butternut) on a pole at about 40'(NO ground radials). Any help you can offer on this would be most greatly appreciated !

P.S. I just passed my General code & theory tests, so this is NOT merely idle questioning. I can finally use the good bands !!!

>
>

If you're looking for a good 2m, I would suggest the Alinco DR 150T. I've had a DR 130T and an HTX-212 from Radio Shack. Both are good radios. However, the 150T has quite a few more features like 100 memories, 70cm receive, the ability to skip memories on scan and much MUCH more. I'm very pleased with mine.

>or by passengers. The on board telephone service has been tested and
>approved and proven not to interfere with the avionics.

Actually, in the case of cellular phones there's nore to it than that.
The FAA doesn't like unapproved electronic devices as you note, but in
the case of cellular the FCC specifically forbids their use because
at the altitude of an aircraft the phone would occupy *many* cells
at once and adversely affect the cellular network. The airphones operate
on different frequencies from cellular, and with a ground network
designed for aircraft sources, so they don't have that problem.
(Newer airphone systems are satellite anyway.)

>Same goes with flammable liquids, wet batteries, flare guns, compressed
>gas bottles, and so on. Forbidden as cargo, but aboard every flight!

Hazardous materials can be shipped air freight in certain cases. Guns
and ammo can be shipped on any flight where they are declared, and
compressed, and even cryogenic, gases can be shipped in FAA approved
containers. Acid can be shipped too, but wet batteries generally
aren't approved containers for it. They are shipped as part of a
larger cargo, however, such as when included with a generator set or
as part of a vehicle being shipped. Those latter items generally
aren't shipped on a *passenger* aircraft, however.

Here in British Columbia, the hydro and telephone poles are marked with a code that tells you exactly what the location of the pole is.

Here's what BC Hydro tells us, in case your utilities have a similar practice.

The poles are marked to the nearest 10 feet or metre and there are three standards that have evolved over the years. The standard that applies depends on when the poles were installed. The tag markings, layouts and meanings are as follows:

1) PRE-1979 IMPERIAL MEASUREMENT

```
!====================================!
! !
! !
! !
! 2239 4914 1300 !
! 059 368 57 j o 04 !
! !
! !
! !
!====================================!
```

2239 stands for 122 deg 39 min West Longitude
059 stands for tens of feet West of 122:39 ie 590 feet West of 122:39
4914 stands for 49 deg 14 min North Latitude
368 stands for tens of feet North of 49:14 ie 3680 feet North of 49:14
1300 stands for a BC TEL/HYDRO map number
57 stands for the year the pole was installed

The rest of the information is regarding ownership,design details and control codes which is of no value for what we are doing here.
To convert the footage to seconds do the following:
as 1 second of latitude is 101.3 feet:

SECONDS OF LATITUDE = FOOTAGE/101.3

for the above example:
3680/101.3 = 36.33 seconds thus the exact latitude is 49:14:36.3
at 49 degrees North 1 second of longitute is approximately 65 feet
therefore:

SECONDS OF LONGITUDE AROUND COURTENAY = FOOTAGE/64
For the above example:

590/65=9.00 seconds thus the longitude is 122:39:09

NOTE: As the longitude lines converge at the Earths poles the conversion
factor varies with degrees of latitude and if your QTH is much different
in Latitude than the Comox Valley you should work out a conversion for
your latitude. At 49 degrees one second is about 65 and at 50 degrees it
decreases to about 64 feet so 1 or 2 degrees of latitude doesn't make a
great deal of practical difference.

2)POST 1979

The poles tagged in imperial measurement after 1979 had essentially the
same information on them for this purpose but just laid out slightly
different.

```
!====================================!
! !
! !
! !
! 2022 5021 05244 !
! !
! 012 162 60H 01 !
! !
! !
!====================================!
```

As you have probably figured out the above location is:

1620 feet North of 50 deg 21'
120 feet West of 120 deg 22'

3) For those of you who's pole is marked in the Metric system, "have fun".

```
!====================================!
! !
! !
! !
! 8 509 5583 11204 !

the 8 is the UTM zone number (what ever that is,hi)
509 is N/S grid line 509,000
5583 is E/W grid line 5,583,000

775 is 775 Metres East of UTM grid line 509,000
505 is 505 Metres North of UTM grid line 5,583,000
79 is the year the pole was installed
T owned by BC TEL
11204 map number 01 control code

As I do not understand the metric system the only way I know of to convert from metric to the Lat/Long Imperial standard is to find a map with marked in both systems. I have a 50000:1 scale government map of my area which is marked in both systems but the accuracy obtained by measuring such a map with conventional methods is much less than the pole markings.

Finally, if you really want to obtain split hair accuracy don't forget to measure the grid distance your antenna is from your nearest pole.After all it is marked to within 10 feet, hi.

Stephan,

Ok, ok. So I posed the question such that it could be taken not as I meant
it.

What I was saying was that I tune into TWIAR to hear about amateur radio.
Long drawn out reports of typewriter makers having finanical problems seem a
little off topic, and since I don't use a typewriter to check into the
local 2 meter net...

I DO know that microprocessors of many forms are used in our hobby.
Gary gave a nice set of examples.

Its nice of you to assume that I am some kind of _____ (insert insult here)
just because of where I work. A lot of people with all kinds of talents and
skills work here, many smarter and higher paid than you.

> I haven't been caught yet buddy. They cannot identify the location
>of the cell phone as long as you keep moving around and stuff.

While the rest of this post is just pure flame bait, this misconception should be addressed. The cellular network *can* locate you. In fact, next generation systems will offer vehicle position location as an option on the phone. The RDF qualities of the cellular system are inherent in its design. The cellular provider *has* to know where you are to provide service. While they only have to know your location down to the single cell level, the techniques employed have better resolution than that. Like the inherent and automatic phone trace capability of service monitoring equipment in ESS exchanges, it's not something the phone companies want widely known, but it's there. Big Momma really is watching.

Whether they'll actually bother to come after an abuser of the system or not depends in large part on how blatant and obnoxious the offender is. The "phone police" like to go after high profile abusers as an example to the rest of us. The FBI has a special squad that goes after high tech thieves, and has recently publicized several arrests of phone cloners in NYC and LA. Just as with the writers of chain letters, the "phone police" are not likely to swoop down on you the instant you commit a crime, but they can, and will, if you make a big enough issue of it in public.

As an interesting subtext, the phone companies went to great lengths to hide the automatic trace capabilities built into the telephone network. In the past, they even lied to police about the ease of phone tracing, and co-opted Hollywood into making it appear that a trace was a time consuming and tedious task. In fact, the system automatically traces all calls, and can "drop a card" any time the phone operators want it to. I speculate that they conducted this disinformation campaign in order to avoid the appearance of Big Brother, which might alarm customers.

The phone companies also don't want you to know how often your phone calls are monitored. It's common practice to listen in on phone calls, ostensibly to check service quality. I know of cases where calls to and from certain numbers are automatically put on switching center speakers because they're usually so juicy that the phone company employees like to listen. Of course this is against official phone company policy, but they do it anyway, much as you cell phone voyeurs listen in even though it is illegal. Privacy and anonymity are illusions. Everything you say and do

can be monitored, and more often than you may think, is.

>Please send all replies to pmy@ix.netcom.com.

The rules say that your transmissions cannot have any pecuniary interest. A broad interpretation of the rule might be assumed to require that you should not talk about your investments. You probably shouldn't air your personal financial information over the air to be safe. My recommendation would be to go ahead and talk about the economy, the stock market in general, performance of specific stocks, and similar topics. Don't make specific buy or sell recommendations and you should be OK. If the FCC has a problem with this, I think they would be on real thin ice from a free-speech perspective. If you and your friend would like to expand your discussion into a group net, I would like to join in. There are so few intelligent conversations on ham radio these days; I think it would be refreshing. Let me know if you are on HF and if you would like to get a net going..

In rec.radio.amateur.misc you write:

>I will be getting a kenwood ts-450s/at. I just saw that they have a
>version out with 6m capabilities. What good is 6m ? Is it just another
>2m band, basically ? What is the UNIQUENESS of this band ? Is there some
>COMPELLING reason to spend the extra $200.00 or so ? I REALLY
>appreciate any help on this !

Howdy again!

Well, 6 meters is a very interesting band. Some have a taste for it,
others do not. For the beginner, I would not really recommend it,
unless you think your investment is long term, then you might regret
not having 6 meters some day.

I have a friend who almost has DXCC on 6 meters, that is 100 countries.
It opens up almost like 10 meters some days, and a simple vertical
antenna will work pretty well, though the beams are small and easy
to rotate, so they are preferred. As sunspots go up....as they are now,
the band will open up more and more.

NOw, 6 can also be good locally, and for mobiling. It propogates pretty
well locally, and has repeaters as well as CW and SSB (and even some
AM here in Southern California). This depends on your QTH, if you are
near a large city, you probably have a good local 6 meter group - or
you can find out about them at the local ham club.

It is really a good band. If it is not a hardship, I would get 6 meters
on the rig. If it is hard to spend the extra $$, you might wait.

Good luck.

>
>But you are inside a metal tube...
>I thought that the reason for the restriction was the possibility of you
interfering with the planes'
>communications, etc...

I recently saw the FAA directive on this issue. The primary reason is because the FCC (yes, the FCC) does not wish you to use your 30,000' high antenna to interfere with numerous cell sites. 850 MHz radio signals will easily escape through the window holes on airliners. Furthermore, at altitude, you will hear potentially many cells - causing a lot of interference to you. The cellular radio telephone system was designed for use by low level users. Cell sizes vary typically from about 1 mile diamter out to about 20 miles in diameter, depending on how many customers must be served. Cells generally reuse frequencies in a way that there are unique channels for 7 cells, and then they repeat. Consequently, the same channel may be in use just 2 to 4 cells away. As you can see, from the air, you will render useless a great many cells on the one channel that has been assigned to you.

3554. Re: **SHOULD HAM DIRECTED HF BROADCASTING BE STOPPED?**

Newsgroup: rec.radio.amateur.misc
Date: 1995-08-27 00:00:00 UTC
From: Hans Brakob <71111.260@CompuServe.COM>
Message-ID: <41oquh$35j$1@mhafm.production.compuserve.com>
Source record: 239745

I think you should clarify the question.

Broadcasting is illegal in the Amateur Service.
If someone engages in broadcasting in violation
of the current rules, then the FCC should take
appropriate action.

Perhaps you meant to ask "Should one-way transmissions
such as Morse practice, information bulletins, beacons,
NASA manned spacecraft retransmissions, be stopped?"

If that is the question you meant to ask, then I
believe the answer is "No".

I think this might be the one that you had in mind.

```
two_pi = 8 * atan2(1, 1);
circ = 40000; # circumference of the earth, in kilometers.
# use circ = 24855 if you prefer miles.
lat0 = dms2rad("n39:05:54");# latitude and longitude of my house,
lon0 = dms2rad("w76:27:30");# ... in [nsew]<deg>:<min>:<sec> notation.
sin_lat0 = sin(lat0);
cos_lat0 = cos(lat0); # sin and cos of my (or your) home latitude.

function gcd(lat, lon, a) {
a = asin(sin_lat0 * sin(lat) + cos_lat0 * cos(lat) * cos(lon0-lon)) - pi_2;
return (a<0) ? -circ * a / two_pi : circ * a / two_pi;
}
```

>Also, is there a relatively simple solution which also accounts for the
>fact that the earth is not a perfect sphere? That's more precise than I
>want, but I'm curious.

I'm sure that there are. I'm also sure that they are not simple, and
that I don't know what they are. You might try Snyder's _Map
Projections -- a working manual_, published by the USGS.

If they own the equipment, then they have the right to tell you how to
use it within the constraints of the law.

> As a matter of fact, they also claim that a HAM that even calls
>another at home, to call into work for him, is in violation of FCC law as well.

This is ludicrous. How is this any different than calling to tell
your wife that you're going to be late?

There is no money being made, there is no commercial advantage being
taken by the user, and he is not benefiting nor is his employer. The
user is just avoiding a hassle by using his licensed equipment.

>My question is this: How can a call to a business over the patch that results
>in monetary gain for both parties (pizza call), be considered legal...and a
>call to your work to say that that you will be late (where no one is being

3568. CQ Alamogordo, NM

Newsgroup: rec.radio.amateur.misc
Date: 1995-08-27 00:00:00 UTC
From: Walter Zorn <1wz@ornl.gov>
Message-ID: <41pv3u$bc0@stc06.ctd.ornl.gov>
Source record: 239759

Hello,

I'm seeking 2M and 440MHz in Southern NM for a planned trip to
Alamogordo. If anyone can send me information, beyond what's
in the ARRL RPTR Directory, I would greatly appreciate it. I'm
especially interested in open (or closed with appropiate
permission, etc.) autopatching to let the folks know our
location (and for emergencies, of course).

Please send any info. you can share to:
Walter (KF0OS) at zornwl@ornl.gov

Just make sure your stand-off bracket is at least 1/4-wavelength
long at the lowest frequency. This would be 19 inches in your
case. And longer is better. You still may get some impedance
change and pattern distortion at 19 inches.

Money made by the air lines, not really, the airlines cell phone is a
specific setup with a lot of engineering so that it will not interfere
with the navigational systems on the aircraft. Your pocket cell phone
isn't and could well get into some of the aircrafts vital equipment and
cause immense problems for all.

So, John wants to drop (!!!!) the code (lower the requirements for a license), rather than replacing the code test with a tougher written on newer modes, techniques and circuits. The latter is a very defensible position (one I'm in large agreement with myself), while the former is...well, you decide.

BTW, I'm curious how tone deafness (inability to match pitch?) affects learning the code?

Plus the fact that the standard cellular telephone system was never
designed to handle RF from "above". It totally screws up the concepts
that make cellular telephones work. Key up a cell phone from 10,000 feet
above the city and you hit numerous cell sites. Totally confuses the
software <grin>.

Take a cell phone up on a mountain overlooking a big city, BTW, and you
may find that it doesn't work in some places. I think what happens is the
software running the cellphone system gets so confused that it just tells
your telephone to go away . . . "I hear you from too many places and I
don't understand how to talk to you".

I don't think I would go so far as to call this ludicrous. Your wife doesn't issue you a paycheck. It is certainly a gray area. If it is a gray area, why chance it? Use another service where such communications couldn't possibly be construed as illegal.

> There is no money being made, there is no commercial advantage being
> taken by the user, and he is not benefiting nor is his employer. The
> user is just avoiding a hassle by using his licensed equipment.

Every situation is different. The employee making the call could be saving his butt by not being docked a hefty amount if his boss knows he will only be a little late. In such case he would be standing to gain financially.

>>My question is this: How can a call to a business over the patch that results
>>in monetary gain for both parties (pizza call), be considered legal...and a
>>call to your work to say that that you will be late (where no one is being
>>financially compensated) be called "not legal"?
>
> Bingo. I agree. Precedent would agree as well.

How is ordering a pizza any different than someone making a patch to their wife who then asks them to pick up a few things at the grocery store? The only person standing anything to gain (other than convenience) is the commercial retailer. Since the radio operator doesn't gain financially, no problem.

Of course, I hope there isn't a rash of pizza ordering taking place on our local repeater. It might make me hungry. ;-)

>Icom once and they said no such thing. Is anyone familiar with a "tuneup"
>procedure for the IC-735?

This rig, and certain Ten-Tec rigs, have this reputation, but I think
that if you'll actually measure sensitivity you'll find it's an illusion.
These rigs simply have lower internally generated noise than older rigs,
so they seem to be deaf, until a signal appears. Users of older rigs are
accustomed to the frying noise coming from a radio monitoring a dead band,
and these radios don't do that, so we assume they must not have enough
sensitivity. This is most apparent, of course, on bands where atmospheric
noise is low enough that receiver noise dominates. On HF, that's the
12 and 10 meter bands. Check your radio with a calibrated signal generator,
I expect you'll find it meets sensitivity specifications.

>a credit card? Any logic here?

Cellular phones and the phone services that offered on board airliners are different. Cellular systems rely on the mobile having limited range so that the frequencies can be reused withing the system. When you leave the ground and try to use a cell phone, your increased effective range can cause interference with many co-channel users, even on systems in other market areas.

The Airphones you see on airliners are installed in accordance with FAA technical standards and operate in radio services established for the purpose of air to ground telephone service. There are two services. The "Air-Ground Radiotelephone Service" (within the Public Land Mobile Service in part 22) operates on 454/459 MHz pairs. The other is the "800 MHz Air-Ground Radiotelephone Service (it's own service under part 22) operates on 849-851/896-898 MHz pairs.

Under part 22.911 of the FCC rules (I heard the section was changed to 22.925 earlier this year - but the text is the same) prohibits the use of cellular phones on board ANY aircraft when airborne (not just airliners). The FAA has federal aviation regulation (FAR) 91.21 that prohibits the use of portable electronic devices. The FAA has published an advisory circular (used to help aircraft operators decide how some FARs should be interpreted and give guidance for compliance) on 91.21. AC 91.21-1 mentions that no portable electronic devices that are considered intentional radiators should be allowed by airlines to be used on board. This includes but is not limited to C.B. radios, remote controlled devices, etc. Even if the FAA felt cell phones were not a safety hazard, the FCC still prohibits their use.

3585. Electromagnetic Fields

Newsgroup: rec.radio.amateur.misc
Date: 1995-08-27 00:00:00 UTC
From: brademac@nyx.cs.du.edu
Message-ID: <41qlhu$d2c@nyx.cs.du.edu>
Source record: 239776

This isn't exactly Amateur Radio related, but HAMs seem to be more electronically literate than most other news groups that this would apply to.
Basically, I have some sort of problem with an electromagnetic field that seems to surround my whole house...It adversly affects my monitor in that the whole left side, and in particular the left bottom side is distorted in the same way as if you were to hold a magnet to it. It isn't so severe that the picture is unusable, but it is annoying. If I turn the monitor on either side, then the picture turns completely distorted (ie - a white screen will become completely purple)...I know it isn't the monitor since I have several different ones that have done the same things...Televisions in my house do the same thing also, but it isn't as noticeable...No matter where I move the monitor in the entire house, the effect is the same with very little change (though there is some) when changing the position of the monitor from right to left. I have tried running the whole computer system off of an unplugged UPS, therefore ruling out power problems...The power company has come out and checked our transformer on the pole, and couldn't find anything...I do have power lines that run near my house, and I suspect those more than anything since it seems to affect the whole house...
Basically, I have tried everything with no success..Short of trying to shield the monitor somehow (which could be expensive and a pain, in general), does anyone have any ideas for this problem??

Please respond to this message or send mail (preferably) or both to brademac@nyx10.cs.du.edu...Thanks!!

You forgot the Secret Service. They are the agency that goes after
cloned phones (under 18 USC 1029). And if the carrier has not sent
anyone out after you it's probably because they don't know what you're up
to. If/when/whatever they find out, the easiest thing for them to do is
just shut off your service and wait for you to come to them.

>Does this ring a bell with anyone? Would be interested in any technical referrences or mfgrs offering them for sale.

Check with the various anti-shoplifting system manufacturers. A lot of them work at microwave frequencies - the tags are basically a receiving loop, a diode, and a transmitting loop (generally at 1/2 the frequency, or 2x or 3x).
Others are a based on a grid dipper - a resonant tag in the field trips the alarm. These are the ones where the "trigger"is a piece of foil tape.
Others, especially the ones used in shopping malls where there could be several systems in close proximity, use digital transponders. These are the ones where they remove the tags for reuse.
The first two are disposable.

I have no pointers to offer - the above is memory of a engineering magazine article I read a year or two ago.

Maybe go to the nearest mall, and see if one of the big stores removes the clothing tags, and ask the manager for a pointer to the manufacturer? you may have to convince him that you aren't after info on how to beat the system....

PLEASE SHOW ME THE LAW that is broken. I want complete citation,
or even a case cite where someone was "convicted" of this crime.

As far as I know, after a long time of hamming,
it is NOT ILLEGAL to modify a radio to transmit anywhere, ONLY TO TRANSMIT
^^^^^^^^
WHERE UNAUTHORIZED (or where not type accepted, etc....)
^^^^^^^^^^^^^^^^^^

I personally find all the "please help me modify my radio to transmit on police frequencies" pretty obnoxious, and I am suspicious, so I do not give help there. But it is not illegal, unless you can show me the law.

Heck I build transmitters all the time that will transmit out of band. Am I required to build in a "lock out" device to exclude all non ham frequencies?

Hello,

I have a friend with one of these radios and he would like to
build the interface and program his own computer to control the radio.
The only problem that he has is that he cannot find the protocols that
the radio uses to be controlled. He would like to get the information
that is needed to make the radio listen to the computer commands. He is
most interested in the data bits and the baud rate and what the actual
commands are that need to be sent out the computer serial port.

Please respond via E-mail and here if you have an answer to this.
He realizes that he could do the solution by throwing money at the
problem but he wishes to do it the old fashioned way and do it himself.

Ohio/Penn DX Bulletin No. 219

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 219
BID: $OPDX.219
August 28, 1995
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 216-237-8208 14400/9600/2400/1200/300 8/N/1

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, ARRL Bulletin, K5GOE, KA7DLN, K9GS, DF4RD, DL6DH, G3SXW, G4BUE & DXNS, JH6RTO, SM7HCJ, VK2SG RTTY DX Notes and DL9GOA & DX News Letter for the following DX information.

NOTE FROM EDITOR: Some information was lost in a file this week and if you do not see your information in this week's bulletin PLEASE re-send it for next week's bulletin. Sorry.... de Tedd KB8NW

4S, SRI LANKA. The DX News Sheets report that Mario, HB9BRM, will be active from Ambalangoda, September 14th to October 3rd. He will sign 4S/HB9BRM and will operate on 80-15 meters using an IC-725 and a longwire antenna strung between coconut trees. QSL to home call.

9N, NEPAL. Roger, G3SXW, expects to be active as 9N1SXW or 9N1/G3SXW from September 12-21st. He plans to be active on all bands, CW only. Suggested frequencies are: 1827, 3507, 7007, 10107, 14023, 18073, 21023, 24893 and 28023 kHz (listening up 2-5 kHz). Roger will concentrate on lower bands and WARC bands. Unfortunately his licence only permits 100 watts output. Roder is an excellent operator and was chosen in the 1993 OPDX/NODXA DX Survey as "DXer of the Year" along with "DXpedition of the Year" for his ZD9SXW operation to Tristan da Cunha. QSL direct to G3SXW, 7 Field Close, Chessington, Surrey, KT9 2QD, England, or via bureau.

9Q, ZAIRE. Joe, G3MRC, has returned to 9Q-land as 9Q5MRC and was heard this past weekend on 18081 kHz around 1845z. Joe also has plans to operate from Burundi (9U) at a later date. QSL to his home address: 18 Grosvenor Avenue, Kidderminster, Worcs DY10 1SS. Also active is 9Q5TR, who can sometimes be found on the 14226 DX Net around 2230z.

DX IN SPACE. W1AW reported in a ARRL Bulletin that German Cosmonaut Thomas Reiter, DF4TR, will join the Russian space station Mir, and will operate signing DP0MIR during the European Space Agency's

"EUROMIR 95" mission beginning September 2nd. Reiter will use the 2-meter FM rig aboard Mir during the 135 days planned for his flight. Primary frequencies to be used (preferably in split mode) are 145.800, 145.550, and perhaps 145.200 MHz. QSLs for DP0MIR should be sent to DARC QSL bureau.

EP, IRAN. The following information was passed on to OPDX from Woody, K5GOE, which came from the Texas A & M radio club list: A. Sadjadian, EP2FM (President of the Anjoman-e Radioamateuri-e of Iran), reports that after a very long lapse of some 14 years, there are indications that there may be amateur radio activity from EP land by Iraians again. EP2FM states that he has lost most of his connections during these long years and would like to appeal for help, mostly in the form of information to help promote amateur radio in his country. He hopes to be able to offer an on the air QSO from EP-land soon and would appreciate any help. EP2FM's InterNet E-mail address is: ep2fm@ALBORZ.SHARIF.AC.IR

FP, ST. PIERRE AND MIQUELON ISLANDS. K9GS, ND9O, N9AU and W9OP will be traveling to Miquelon Island for the CQWW SSB Contest. The operation will take place from October 25-31st. During the contest, they will be using the call TO5M. Outside of the contest, they will be operating FP/ homecall. Before and after the contest, they plan on operating mostly CW with a heavy emphasis on the low-bands. They will especially be looking for Asia at sunrise/sunset on 160 and 80 meters. QSL to K9GS for all calls via CBA.

NASDX SATELLITE DX WEB PAGE. Joe, KA7LDN, has created this WEB page with the main purpose of showing some pictures of earlier DXpeditions and to listing what DXCC countries have been activated on the Satellites, plus gather some satellite equipment for future DXpeditions. The URL address to access the WEB page is: http://www.accessone.com/~emunger/KA7LDN

OH0, ALAND ISLAND. Seppo, OH2BDA, will be active as OH0BDP, from September 11-17th. Activity should be on CW/SSB and all bands. QSL to OH2BDA, S.Kaariainen, Viikinkitie 6G 61, SF-01200 Vantaa, Finland.

PJ7, ST. MAARTEN. Mike, K6URI, will be active as PJ7/K6URI, from September 9-23rd. Activity will be on 40, 20 and 15 meters using CW and SSB. QSL via homecall.

QSL MANAGER AVAILABLE. Henning, DL6DH, states he is willing to volunteer his free time to act as a QSL Manager. If interested in Henning's services, he can be reached via packet radio at: DL6DH@DB0BID.hes.deu.eu

RESCHEDULED DXPEDITION. According to "VK2SG DX RTTY Notes", Shun, JF1MGI, has rescheduled his August/September trip to Madagascar to October/November due to some professional commitments.

SH, SI, 7S, SWEDEN (ACTIVITY NEWS). Olle, SM7HCJ, reports that the first new "novice-licences" will be issued very soon in Sweden and to watch out for the "SH" prefix on 3.5, 7, 21 and 28 MHz (SSB on 28 MHz also). A number of Swedish radio clubs will be using the "SI" prefix from September 1st to November 30th to celebrate 100 years of radio!

Begin looking for the special event station 7S6SAQ to become active to commemorate the "70 Years of Grimeton Radio Station". The frequencies and dates of this events were not supplied.

V2, ANTIGUA. There have been a few more individuals who have announced their activity from here this week. Stephen, WF2S, will be active as V26Z from September 17-30th. Activity will be on CW and RTTY, with his participation in CQWW RTTY Contest. QSL via homecall. Also, Bob, W2KKZ, will be active as V26Y, from September 24-30th. His operations will be mainly CW. QSL via homecall.
Operators of the Frankford Radio Club that will be active as V26B in the CQWW SSB Contest operation (October 28-29th) have been announced. The operators (plus their own V2 callsign) are: N3BNA/V26A, WT3Q/V26B, N3ADL/V26DX, AB2E/V26E, KA2AEV/V26R, K3MQH/V26T, WA2UDT/V26U, KF3P and WB2P (V2 calls not known presently). QSL each operator to home call except V26A via WB3DNA. There will be two awards available for contacting V26B: a certificate for working them on 10-75 meters during the contest and a special certificate for contacting them on 160-10 meters. QSL requests will automatically get you the certificates if you qualify.

VP5, TURKS & CAICOS ISLANDS. Nob, JA7AYE, is currently active as VP5/JA7AYE. His length of stay is unknown at this time, but he has been heard on 20 meters (14195 or 14010) throughout the day. Also check 7016 kHz around 0315z. QSL via JA7ZF.

ZF8, CAYMAN ISLANDS. JA6VZB/Tosy and JH6RTO/Seiji will be active from Little Cayman with the callsigns of ZF2TY/8 and ZF2SF/8, respectively, on September 24 to 28th. Activity will be on 160-10 meter, using CW/SSB and RTTY/SSTV. On September 28 and 29th, they may be active from Grand Cayman. QSL ZF2TY via JA6BSM and ZF2SF via JH6RTO.
Buzz, N5FTR, will also be active from September 3-9th (his callsign was not mentioned). He will be active on SSB operating on 40, 20, 17, 15 and 10 meters. Especially check 14195 kHz and Buzz requests that you reply with full calls only. QSL to CBA or via W5 bureau.

NEW!!!! VOICE OR FAX YOUR DX INFORMATION NOW! A FAX/ANSWERING Machine is now available 24 hours day. The number is 216-237-8208 which shares the same phone line as BARF-80 BBS using a data/fax/phone switch. To access: 1) Dial Number. 2) Wait for first ring (the second ring should be a false ring from the fax/data switch box) and then dial four quick ones ("1111"). (NOTE: Some FAX machines that send single "BEEPS" every second will not have to do this step.) 3) The phone will pick up and after the "BEEP" leave your voice message or FAX.

Excerpts and distribution of The OPDX Bulletin are granted as long as KB8NW/OPDX/BARF80 receive credit. To contribute DX info, call BARF-80 BBS online at 216-237-8208 14400/9600/2400/1200/300 and leave a message with the Sysop or send InterNet Mail to: aq474@cleveland.freenet.edu or send BitNet Mail to: aq474%cleveland.freenet@cunyvm or send PRODIGY Mail to: DFJH48A or send a message via packet to KB8NW @ WA8BXN.OH.USA.NA

Hmmm, Best I can do is make a shortcut to the folder, then you can change the icon for THAT folder and hide the origional you cannot delete the origional, only put it elsewhere. However you will forever have that little "SHortcut arrow" in the bottom left corner of the icon.

Sorry its not perfect, but its the best I can come up with right now.

Look in the Yellow pages for maps. Find someone who sells topographic
maps. Get the 7.5 minute Quadrangle map for your section. You will be
more accurate using this map, than the precision required.

In article <41qre2$1jh@ixnews6.ix.netcom.com> ke6tgn@ix.netcom.com (John B. Lawrence) writes:
>Dits and Dahs are two different sounding tones, or so I am told. They
>sound identical (most of the time) to me when I am listening to my
>shortwave receiver. I can transmit the code (with an iambic[sp?])
>keyer, but I'd have on hell of a time trying to answer someone who is
>trying to transmit to me.

Ah, as I suspected you are having temporal discrimination problems.
While this can be an actual physiological problem, it rarely is.
The answer is, of course, drill. You can condition your wetware to
tell the difference between a dit duration and a dah duration with
sufficient drill. Ideally, however, you don't want to condition for
simple dit and dah discrimination. What you want to do is condition
a response to the entire letter gestalt as a unit. Each letter is
made up of a pattern of dits and dahs that you can condition the
wetware to recognize as a separate symbol space.

Put away that keyer, concentrating on sending is no good until
you can copy. Concentrate on drilling the letter sounds into
your wetware. Do it, and it will come. It comes to some much
more easily than to others, so don't be discouraged if you see
little progress for weeks at a time while your friend may pick
it up in a few days. The human variability in this regard is
huge.

The key to successful Morse copy is *DON'T THINK*, just do.
The wetware conditioning is a subconsicous process that
short circuits the higher brain functions when it works
properly. Conscious thought just interferes with the
decoding process which must become purely reflex if you
want to achieve any speed. Reserve the higher brain centers
for correlating those symbol spaces into aggregate groups
forming words and meaning.

Remember, a bird with the brain the size of a pea can be
conditioned to deal with the symbol space of Morse, but
of course will have no idea what it spells. During drill,
you want to clear your brain down to the level of that
pea brained bird so that the conditioning can proceed
as efficiently as possible.

Picture the symbol space as a n-dimensional biorthogonal
matrix, let the subconscious illuminate a vector for
each symbol received, and let your conscious mind
do a least distance correlation to discover the letter

being represented. In other words, the conscious should
be saying to itself, "sounds like 'A'" when the subconscious
presents its di-dah decoding.

You want to use a biorthogonal projection because Morse
has inverse correlates, IE 'A' and N', 'G' and 'W', etc,
which are inverses of each other. You want to put maximal
distance between these inverses or they will cause constant
errors to the decoding matrix you are burning into your
brain's neural nets. Unfortunately because the code isn't
uniform, you need a sparse matrix. This is lots easier to
do in hardware than wetware of course, but we're stuck for
now doing it the hard way because of the government's test
requirements.

|> 10 m 28.190 MHz

I assume the 40m SSB frequency is a typo, since 7.090 is in the CW portion of
the band. My guess is this should be 7.290 MHz.

The service is now being offered (from what I hear) by GTE Mobilnet in
California. The program does not require altering the ESN of the second
phone. The catch is only one of the phones is considered the primary
phone. And only the primary phone may roam to another system.

Nah, never happen. First off - cw (A0A) is legal on all bands. And thats likely to stay too. Voice is a mode that it seems requires less brains to operate, assuming someone is capable of adjusting the transmitter properly..
..abt 1/2 the clowns on 20m ssb sound like the RCA mutt being shoved thru the Horn! i.e.- they have poor technical skills at operating ssb phone. I would favor an operating skills test for phone ops...that would probably disqualify the large number of boneheads on the phone bands...a majority of whom seem to be the Contesters. The others causing QRM prob couldnt pass the operating test either, so the phone bands might become a nice place..
..last point: cw people seem to be a lot more polite. Computer Class? No..
I seriously doubt it. Why dontcha write the FCC and petition em so you can run packet on CB?/GMRS?/49MHz? ;-)

>Federal statute prohibiting cellular cloning of your own phone.

Actually there is. See part 22.919 in the FCC's rules. And 18 USC 1029
for the use of counterfeit access devices. In addition cloning phones in
California is also enforced with section 502.6 and 502.7 of the penal
code and CPUC tariff 3T, rule 19-B2. Your mileage may vary in Texas.
All of these are used to enforce the prohibition of cloning ESN's and
none offer an exemption for your own, personal phone.

No one here (that I can see) is going out to "enforce" for the phone
company. But when the discussion of legality comes up, plenty of
misinformation is thrown around. Since this is an Amateur radio group,
the FCC rules and laws apllying to radio are often discussed. With that
in mind - one should remember that there are people that have lost, or
are in the process of possibly losing their Amateur tickets over
non-Amateur offenses of FCC rules.

>Cellular companies do not want you to know this, and most of their
>employees are unaware that it is feasible and legal. Their first
>response, when asked, is almost always that it not technically possible.

The operating systems running many cellular networks was/is not
technically capable of handling multiple appearnaces of one number. But
that is changing. The service is being offered in California by at least
one of the carriers. This legitimate service does not require "hacking"
the phone's ESN.

Seems that there should be SOME "limiting factor"... Could be $$, but that would keep poorer people out..
If anyone could simply go answer a few questions and get a license, you'd have another CB..
Total waste of time trying to use it for anything but play. Too many people...
Like the only use for Morse might just be to keep the thing open enough for the few willing to go the extra...

Radio Shack sells a filter that's supposed to somewhat get rid of static generated by the engine..
It's supposed to be hardwared into the cars' wiring.. I wanna wire it into my cigarette-lighter adapter
for the radio instead of taking the dash apart (I'm not exactly a mechanic type, for sure) to install..
Would that work? The salesman had no idea..

3605. Re: What is the ARRL's position on getting rid of CW ?

Newsgroup: rec.radio.amateur.misc

They have stated that they support retaining the cw requirements as the ITU's Rule #RR2735 states it: "..for Amateur operations below 30MHz, the applicant/licensee shall demonstrate operable skills using International Morse Code, sent by hand and received by ear (or other suitable means, i.e. flashing light, etc) without assistance..."

This rule, as a part of the Radio Act of 1934 (amended), is the reason you will continue to be required to do cw for hf privs. They might drop the *speed* down to 10 or 5 WPM...but you can bet the Farm that CW will continue to be a part of Amateur Radio.

Always amazes me that someone can get a license without the faintest
idea of what a local oscillator is and how it radiates.

It always amazes me that someone can get an Amateur License and not understand how the local oscillator in a reciever works.

I can't wait for the day that someone designs an AM reciever that can reject an on-frequency interfering signal.

Another place to check is the local animal hospitals, vetrinarians
and animal welfare shelters. There are identification capsules that a
veterinarian can place under a pets skin with a hypo that acts this way.

Also another place to check is with the railroad companies. They
have a device affixed to a large amount of their rolling stock now that will
respond to an RF burst with a reply on another frequency identifying the car
or locomotive that the device is mounted on.

3610. SF Electronics shops (chinatown)??

Newsgroup: rec.radio.amateur.misc
Date: 1995-08-28 00:00:00 UTC
From: pve@dg13.cec.BE
Message-ID: <30417738@smtp>
Source record: 239601

Granted there are tourist traps in places like chinatown and japatown.
However, not every shop is a tourist trap. Crazy Eddie's (since closed) or
47th street photo (east 47th street) are cheap places to buy anything and
they are certainly not tourist traps.

In SFO try HRO. Take CalTrain to Sunnyvale and walk a few minutes.

In NYC try Barry's at 512 Broadway (expensive, but then this is NYC).

Peter, Kc1qf

3611. Subject: Kenwood TM-241A comments?

Newsgroup: rec.radio.amateur.misc

From: pve@dg13.cec.BE
Message-ID: <30417CB7@smtp>
Source record: 239602

Do not, I repeat, do not, buy the 241A for airband reception. As QST and the manufacturer have acknolwdged in the past, the aIRBAND SENSITIVITY IS BAD. Everything else is great but if you are interested in airband RX, look elsewhere.

I bought a 241A a couple of years ago and even within site of the tower (1/2 mile) the airband is hissy. The 27A makes wonders in comparison.

Maybe the newer ones have this problem fixed (ask Kenwood), but I couldnt find the reason in my unit.

Best,

Peter, KC1qf

3612. Re: Windows 95 - You need a license...

Newsgroup: rec.radio.amateur.misc
Date: 1995-08-28 00:00:00 UTC
From: richm1110@aol.com
Message-ID: <41spn9$1k9@newsbf02.news.aol.com>
Source record: 239603

Well -- After a little effort, I figured it out. How to get the short-cuts (icons) on the desk top.

1. Access the Windows Explorer
2. Selected the Drive letter that holds the program file (folder) you want on the desk top
3. Select View from the Tile Bar and then Options.
4. Remove the check-mark from Hide MS-DOS file extensions....and OK
5. Select the executable file (*.exe) that starts the program
6. Drag and Drop that file to the desk top
7. Close Explorer.

The above can also be accomplished using the Icon My Computer.

An Icon should appear on the desk top. Example: Short-cut to winword.exe. Select the Icon and press the right mouse button. Select "Rename" from the pop-up window. Short-cut to winword.exe will be highlighted. Type in a new name -- Word 6.0 for example. The Icon (short-cut) can be removed from the desk top by selecting and hitting the delete key or using the right mouse button - selecting "Delete" from the pop-up window. THIS WILL NOT ERASE YOUR FILE. You can also change the Icon name by selecting the Icon and then selecting the text box below. Careful not to double click in your selection. The desk top properties can be changed by clicking anywhere in the deck top (area of no icons - please) with the right mouse button and selecting "Properties". Select the "Appearance Tab". In the *Item Box - select Icon and make changes to the size, text and color features. The other changes in the Item Box are Icon Spacing (up & down). To rearrange Icons on the desk top, select the desk top with right mouse button (area of no icons) and select *Arrange Icons.

OK- Super Hams, we are having fun now.

Regards
KC7MTJ

The control ops on the repeater I use require anchovies to be on
any pizza ordered via the autopatch. That keeps most of the pizza
traffic down.

I have always heard the Icom IC-735 was a great performer and I suspect that Gary is correct. I don't recommend that you go tweeking it on your own unless your have the correct equipment and know what you are doing. Modern receivers can be very quite and can fool you into thinking their sensitivity is poor until you stack them up against an order rig when signals are on the band. My FT-980 is this way...it has the quietest receiver I ever owned and only shows its stuff when you compare it to something.

You might try setting your receiver on 29.408 Mhz when RS-12 is coming overhead and see how you can copy the beacon. 29.352 or 29.357 is the beacon for RS-10 and that will give you the same indication. They usually come in somewhere between an S-1 and S-5 just to give you a starting point. Being that
we are (hopefully) at the bottom of the sunspot cycle 10 meters can be very quite. Sometime in the novice portion around 28.460 you 'might' hear someone but you can not count on it. 15 meters is the same way. How does it perform on the 21.550 shortwave band? That usually has some activity during the day.

ARLX047 WRTC-1996 plan announced

ZCZC AX17
QST de W1AW
Special Bulletin 47 ARLX047
From ARRL Headquarters
Newington CT August 28, 1995
To all radio amateurs

SB SPCL ARL ARLX047
ARLX047 WRTC-1996 plan announced

A second World Radiosport Team Championship (WRTC) is scheduled to be held the weekend of July 13 and 14, 1996, in the San Francisco Bay area, sponsored by the Potomac Valley Radio Club (PVRC) and the Northern California Contest Club (NCCC).

The competition will run in conjunction with the IARU HF World Championship, and the NCCC, WRTC-96's host organization, hopes to publish formal rules soon.

The first WRTC was held in Seattle in 1990; a Washington, D.C. group, headed by the PVRC, had begun plans for a second, to have been held in the D.C. area in July, 1995, but that event did not materialize. WRTC-96 co-chairman Bruce Sawyer, AA6KX, said that the NCCC expects to make a number of changes to the team selection criteria the PVRC had planned to use, and to contact those contesters who had submitted applications for WRTC-95.

The WRTC pits two-person teams comprised of some of the world's top operators in head-to-head competition. To emphasize operator ability, each team runs the same amount of power and operates from stations having similar antenna systems and located in the same geographical area.

For more information about WRTC-96, contact Rusty Epps, W6OAT, at 651 Handley Trail, Redwood City, CA 94062, USA, or via e-mail at epps@NetCom.Com.

The simplest and best solution I've found is to simply drop by your
town offices. You town engineer will certainly have VERY exact maps
of the town and can calculate the location of any place in the town
to the nearest hundredth of a second. When I asked for the location
of my own house, I was asked, "which room?"

3630. Testing in Germany

Newsgroup: rec.radio.amateur.misc
Date: 1995-08-28 00:00:00 UTC
From: pve@dg13.cec.BE
Message-ID: <304170CA@smtp>
Source record: 239621

You can get in touch with Dan Wolff, DL4VCW/KA7AGN, 06142/8405, at Bitburg.
He will put you in touch with the rest of the US testing teams. There is a
test session in Bitburg, Sep 30.

Best,
Peter, KC1QF
kc1qf@amsat.org

3631. REPLY TO INFO-HAMS and REQUESTERS

Newsgroup: rec.radio.amateur.misc
Date: 1995-08-28 00:00:00 UTC
From: pve@dg13.cec.BE
Message-ID: <304170F1@smtp>
Source record: 239622

All,

many people request replies sent to them directly and not to info-hams. However many of us are also interested in the answers but we NEVER get to read them. Thats because people reply direct.

So please, please, please, when replying to messages that state: "please reply direct to ......" copy info-hams as well. It's a small step which will make many people happy.

Thanks,

Peter, kc1qf@amsat.org

3632. IPS Daily Report - 28 August 95

Newsgroup: rec.radio.amateur.misc
Date: 1995-08-28 00:00:00 UTC
From: rwc@ips.oz.au
Message-ID: <41tj03$e2j@flare.syd.ips.oz.au>

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 28/2330Z AUGUST 1995 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 28 AUGUST AND FORECAST FOR 29 AUGUST - 31 AUGUST

1A. SOLAR SUMMARY
Activity: very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 82/23

GOES satellite data for 27 Aug
Daily Proton Fluence >1 MeV: 1.6E+05
Daily Proton Fluence >10 MeV: 1.7E+04
Daily Electron Fluence >2 MeV: 3.2E+07 (normal)
X-ray background: A7.7
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
29 Aug 30 Aug 31 Aug
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 29 Aug: 82/23

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: quiet

Estimated Indices : A K Observed A Index 27 Aug
Learmonth 4 2111 2111
Fredericksburg 5 9
Planetary 7 6

Observed Kp for 27 Aug: 2212 1223
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
29 Aug 5 Quiet
30 Aug 10 Quiet to unsettled
31 Aug 5 Quiet

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND
DATE LOW MIDDLE HIGH

28 Aug normal normal normal
PCA Event : None.

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
29 Aug normal normal normal
30 Aug normal normal fair
31 Aug normal normal normal

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Observed
DATE T index MUFs at Sydney
28 Aug 29 near predicted monthly values, apart from 30%
enhancements after 19UT.

Predicted Monthly T index for August: 15

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T index MUFs
29 Aug 20 near predicted monthly values
30 Aug 20 near predicted monthly values
31 Aug 20 near predicted monthly values
COMMENT: Darwin MUFs: mostly near predicted monthly values, with some
night-time Sporadic E layer.
Townsville MUFs: near predicted monthly values.
Hobart MUFs: mostly near predicted monthly values, with night-time
Spread F.

This is what we have for our local ESDA tornado spotters' group. I have never actually WORN it ... I carry mine in the glove compartment of my car. But if I did wear it, at a distance someone would think that I'm a hospital employee.

Some of my police friends have told me stories about happenings when their badges were just spotted in their wallets by someone nearby in a store. I'd rather have the photo ID clip!

73, Zack W9SZ

3637. Extracting FM station info from FCC database

Newsgroup: rec.radio.amateur.misc
Date: 1995-08-28 00:00:00 UTC
From: kodis@access1.digex.net
Message-ID: <41tp7r$o0v@access1.digex.net>
Source record: 239628
Cross-posted to: rec.radio.shortwave,rec.radio.scanner,rec.radio.amateur.misc

As you would imagine, the FCC maintains a database of all broadcast stations licensed for operations in or near the US. This information is available from their FTP site, FTP.FCC.GOV. The file containing the FM station data contains over 8 MB of information in a 2 MB file. The information is stored in a format which is not usable directly. While few people would be interested in browsing through all of this data, many people, myself included, would be interested in getting a list of all of the nearby FM stations, with a few of the more important station parameters displayed in an easy-to-read format.

Toward this goal, I developed a script which retrieves the FM database and generates a concise list of FM stations in my area. The first few lines of this list are shown below. The columns show each station's frequency, station class, callsign, effective radiated power and antenna polarization, latitude and longitude, distance and heading (useful for antenna pointing), and the state and city of the station.

```
Freq Class Callsign Power Lat Lon Km Deg City
---- ----- -------- ----- --- --- -- --- ----
88.1 FM B1 WJHU 10000 - N39:19:53 W076:39:28 31 326 MD Baltimore
88.1 FM D WMUCFM 10 + N38:58:59 W076:56:37 44 253 MD College Park
88.1 FM B1 WJTM 4000 + N39:25:05 W077:30:03 96 292 MD Frederick
88.1 FM D WVYC 36 - N39:56:49 W076:43:47 97 346 PA York
88.5 FM B WAMU 50000 + N38:56:09 W077:05:33 58 252 DC Washington
88.7 FM B1 NEW 10000 | N39:13:44 W075:45:15 62 77 MD Massey
88.9 FM B1 WEAA 12500 + N39:20:31 W076:35:13 29 338 MD Baltimore
89.1 FM A WXHL 1 - N39:40:38 W075:39:47 94 47 DE Christiana
89.3 FM B WPFW 50000 + N38:56:09 W077:05:33 58 252 DC Washington
89.7 FM B1 WTMD 10000 + N39:23:45 W076:36:29 35 339 MD Towson
89.9 FM A WOELFM 3000 + N39:35:35 W075:51:49 75 43 MD Elkton
90.7 FX D W214AD 30 - N38:43:12 W075:56:54 61 134 MD Easton, etc.
```

I thought that others might find such a list of FM stations useful, and so I put the script on my FTP site. Instructions on the use and customization of this script are in the comments at the beginning of the file. It should be usable on just about any Unix box. I've also been able to run it unmodified on my PC under OS/2, using the Internet access kit for FTP access, and the GNU version of bash, gzip, awk, fold, sort, and other utility programs.

The URL for the file is:

ftp://ftp.digex.net/pub/access/kodis/fmx

or if using ftp manually:

```
$ ftp ftp.digex.net (log on as user anonymous)
> cd pub/access/kodis
> get fmx
```

The script is well commented, and should be easy to modify if a different output format or selection of station parameters are desired. The FCC also maintains lists of all television stations within and near the US, and of all AM stations in the Western hemisphere. Generating a similar list for transmissions of these types should be a simple clone-and-hack exercise.

I hope that many of you find this a useful program. I'd be interested in hearing any comments, criticisms, or suggestions that you might have, and will be happy to answer questions as time permits by e-mail at kodis@access.digex.net.

-- John Kodis.

The following is a QST

The American Radio Relay League tells the FCC that it supports
a number of proposed regulatory changes, but opposes others. Also
Southern California tries to sort out its repeater coordination
problems on the two meter band by electing a new spectrum
management chairman. AB6FC has a lot of work cut out for him as

you will hear in Newsline report number 941 coming your way right now!

(*****
ARRL SUPPORTS CHANGE

The ARRL says that it supports several proposed regulatory changes. It has filed comments on FCC WT Docket 95-57, a notice of proposed rule making on five items of importance to amateurs. These items are as follows:
First is a lifetime amateur operator license, originally proposed by the League in a petition filed January 6, 1994. The ARRL said in its comments that it believes a relatively substantial number of amateurs would benefit from such a lifetime license.
The League says that the current Commission's proposal is not quite what the 1994 petition requested. Rather, that former licensees be given credit for examinations passed in the past. This says ARRL would create an unnecessary burden for volunteer examiners and would assign to them a function contrary to the Communications Act.
Next, back on April 4, 1994, the League petitioned the FCC to change the number of bona fide members necessary to constitute an Amateur Radio club from two to four. This, for the purpose of applying for a club station license. The FCC has recently resumed issuing of club station licenses after a 15 year hiatus, and the League says that since the FCC no longer requires the filing of organizational documents from clubs, that increasing the required number of members to four as the FCC has proposed in WT 95-57 is more important than ever.
Third, the League strongly opposed the creation of a session manager for volunteer examiner test sessions, as proposed by the FCC based on a petition by the Rules Committee of the National Conference of Volunteer Examiner Coordinators. The League argues that there is no reason why the (required) three VE's should not be held jointly responsible for the proper conduct of an examination, and said that the FCC's plan would undermine the integrity, both perceived and actual, of the VE program.
Forth, the League supports a proposal that the FCC issue special one by one call signs for certain special event stations.
Finally, the ARRL also supports allowing portable indicators to be sent before, after, or both before and after the station call sign, as the operator chooses.
Action on most of these matters is expected before years end.

(*****
SHIP TO SHORE HELP

Ham radio became a communications lifeline for a pair of hams involved in a cruise ship mishap. On the evening of June 10th,

the ship Royal Majesty ran aground on a sandbar, off Massachusetts' Nantucket Island, as it made its way back from Bermuda to Boston. Passengers included Arnie Zunick, K1BPM, and Thad Litchfield, K1AFS, and their wives. By the next morning the ship's satellite telephone communications were overloaded by the 1000 some passengers trying to reach their families and friends. Zunick and Litchfield climbed to the uppermost portion of the ship with 2 meter handhelds and listened for active repeaters. Their timing was right, signals were good, and the two were able to autopatch through their local club repeater in Danvers, Massachusetts to their families, assuring them that everything was okay. They then made more patches for other passengers while their batteries lasted.
Later in the day it became obvious that the ship would not be off the sandbar that day and would spend another night aground. With recharged batteries, Zunick and Litchfield this time were unable to raise the Danvers repeater. The did find an open machine on 146.88 MHz belonging to the Hartford area Insurance City Repeater Club over which they contacted Chuck Motes, K1DFS, in Plainville, Connecticut. Motes took all the traffic and made telephone calls informing families of the situation and the fact that the ship and its passengers would be stuck for another day.

(*****
CAL CALL ID

Federal officials have cleared the way for Caller ID in California. This, with a ruling that callers seeking confidentiality are the ones responsible for having their numbers blocked. Already available in 46 states, Caller ID has been held up in California because the state's Public Utilities Commission imposed privacy requirements that Pacific Bell said made the service prohibitive.
Caller ID gives telephone users the option of knowing the origin of incoming phone calls before they pick up the receiver.

(*****
NEWSLINE SUPPORT FUND REPORT

In the month of July we heard from the Cincinatti Chapter of the OMIK Electronic Association, the Riverside, California County Amateur Radio Association. We need to hear from more of you to keep these newscasts coming.
Remember the clubs that support with the club name, repeater call and service area get a mention during the newscast id break.

(*****
TASMA ELECTS NEW PRESIDENT

Twenty nine year old Carl Cockrell, AB6FC, says that he is going to try to reunite the feuding factions of Southern California's 2 meter FM community. An Friday, August the 4th,

Cockrell was elected in a lopsided 360 to 1 vote as the new president of Southern California's Two Meter Area Spectrum Management Association. His election comes only a month after his predecessor Sidney Radus, N6OMS was ousted in a recall election that left bitter feelings among area hams. Cockrell says that the most important job he has is saving the organization by bringing the various factions of the two meter community back together:

"What I would like to do this year, if nothing else, would be to reorganize TASMA into a body that will work together. And work with the repeater owners and the users also. I know that a lot of people look at TASMA and criticize it for being mainly controlled by users, but you have to remember these users are using repeaters and they are a large power source. It is similar to the new no code technicians that have come online and how they are affecting what the league does and what the FCC does." Carl Cockrell, AB6FC

Cockrell may well have his hands full in trying to get the various interests to cooperate. The issue that has brought TASMA to the brink of oblivion is the organizations strong stand in favor of repeater user rights. Its the reason that many repeater owner operators have abandoned TASMA membership.
And Cockrell has another major obstacle to overcome. The same problem almost every coordinator across the land is facing. Its the attitude on the part of many repeater owner operators that they already have their channel pairs. That their repeaters are on the air with signals cast in concrete. They ask why there should be any repeater council, or for that matter, why anyone else should be allowed to put another repeater on the overburdened two meter band.
Meantime, at least three mini two meter coordination councils have set up shop in Southern California. Each is claiming that it is the replacement for TASMA. Only one is really active in soliciting the support of repeater owner operators. Only time will tell if any will be successful, or if Carl Cockrell, AB6FC will pull off a miracle and bring everyone together once again.
And for those of you wondering why we are putting such emphasis on this regional story. The fact is that the predicament facing coordinators who are trying to keep some semblance of order on our repeater bands is not limited to Southern California. Other crowded urban areas are facing the same problems of overcrowding, limited spectrum and new hams waiting in line demanding the right to put up new, wide coverage machines.
The only difference is that it hasn't yet exploded where you are. In Southern California, it already has. And if you close your eyes to the problems facing your voluntary repeater coordination council, your area will be next.

(*****
NARCC SAYS YES TO MEETING

The President of the organization that coordinates ham radio repeaters in Northern California says that the upcoming National Conference of Frequency Coordinators is a meeting that is long overdue. Don Smith, W6NKF, who was recently elected for a second time to head up the Northern Amateur Relay Council says that he is looking forward to the October 7th meeting in St. Charles Missouri because it will be a chance to finally present his groups ideas:

"We are kind of curious to know which way coordination is going to go into the future. We want to know whether we wind up with national coordination or are we going to have regional coordination. We are in the coordinating business. At least we try to be in the coordinating business and we are concerned just exactly what the agenda is for this meeting. What is going to come out of it. Just exactly how coordination is going to work or fit in to the long range planning in amateur radio." Don Smith, W6NKF

Smith says that the biggest problems facing most coordinators is recognition by the ham community and where to put new repeaters. In many urbanized areas there are no more channel pairs available:

"One of the pressing problems facing coordinators is that we don't seem to have any backing from the FCC or anyone else. We seem to be challenged at every turn. Who names you the coordinator. WE have traditionally been the coordinator for many years. Some of our problems are we are running out of frequencies, everybody and their brother wants to put a repeater on the air. We bend over backwards trying to accommodate all those we can. When we do run out of frequencies then somebody comes up and says "Well, to heck with you. We are going to put one on the air anyway."
We are trying to figure out if we are banging our head against the wall or is there going to be some organized coordination that has some teeth in it." Smith

Smith says he is aware that some coordinators favor a limitation of one repeater per ham, but he has a different view. Smith says that large clubs and repeater networks mean stability for the average ham on the air:

"We do have quite a few systems up here that are multiple repeater owners. In some ways that is not too bad an idea because at least it gives a strong group or a large club the stability to operate a system vs many of the, I am not belittling anybody by saying this, but we have quite a few repeaters on the air that are tying up the channel that are owned by one person that has 3 of 4 users. I think that is a waste of spectrum, myself." Smith

Don Smith says that he will be traveling to St. Charles with an open mind and a mandate of cooperation and trust. He says that this the only way to make a meeting like this be a success.

(*****
WORLD CLASS FOXHUNTING AT HAMCON '95

Joe Mell, K0OV says that he and others are planning a very special hidden transmitter hunt for the 1995 Southwestern Division ARRL Convention on the Queen Mary over Labor Day weekend. Joe says that you will need some direction finding gear, but you won't need a car for the hunt this time. That's because HAMCON 95 will feature the first international rules foxhunt ever staged in California, with hundreds of dollars in cash prizes available for the winners! It's all on foot, no vehicles allowed.
The HAMCON Foxhunt '95 will be the last event of the convention, beginning early Sunday afternoon September 3rd at an outdoor venue not far from the Queen Mary in Long Beach, California. It will be open to anyone of any age who has registered at the convention. Families are welcome, but all entrants will compete independently and each entrant must bring his or her own RDF equipment. All transmitters will be on two meter FM. Similar to IARU competitions, there will be separate divisions for various age groups. The Southern California Six Meter Club is organizing this event. For more information you can contact Joe Mell, K0OV, direct.

(*****
ATV LIST

KB8WBK says via packet that he is compiling a list of Amateur Television repeaters. He says that not all are listed in the ARRL Repeater Directory and asks that if yours is one not listed to please forward to him the information on your system. A copy of your groups newsletter, if you have one would also be appreciated. Dave says that he will send a copy of his completed list to all who reply. Send your information to David Hiner, KB8WBK, 45 Sheppard Drive, Pataskala, Ohio 43062.

IEE MEET

Overseas, the United Kingdoms Institute of Electronic Engineers will be holding an International Conference celebrating 100 Years of Radio between the 5th and 7th of September. Convention venue is London's Savoy Plaza. One of the sessions titled Tuning and the Amateur is chaired by Pat Hawker, G3VA. Other lecturers at the conference will include Professor Martin Sweeting, G3YJO, from the University of Surrey UoSAT program.

(*****
AMSAT UK COLLOQUIUM NEWS

This year's Amsat UK Space Colloquium was attended by 113 people from five continents. Maybe the biggest news from this years gathering in England was the weather. As usual, it was hot in and around the University of Surrey, but about three hours

after everyone went home there was a cloudburst with lightning and heavy rain. And we do mean rain!
Reports from the scene say that the area outside the lecture hall was under about six inches of water. There was almost as much water inside as the roof couldn't stand the strain.
The event did not provide as much in the way of hot news as in the past but the lectures were all well received and very informative. A full report on this years Colloquium is available from many AMSAT organizations, worldwide.

(*****
SA SAT TV

A group of South African companies plans to introduce satellite TV at a startup cost of 1,500 rand, that's about $420 plus a monthly fee.
With the launch of Pan American Satellite Corp's fourth satellite PAS-4, a consortium headed by the South African Broadcasting Corporation and communications services company MultiChoice wants to bring television to every South African.
And an independent company, African Satellite Entertainment Corporation plans to start beaming programmed to South Africa using the Intelsat 704 satellite by September 1st.

(*****
ROBERT D. GRANT UNITED LABOR ARC

KB2MKP says that the Robert D. Grant United Labor Amateur Radio Association holds its net on 28.420 MHz every Saturday morning at 15:00 UTC. All amateur operators are welcome to join in the net which is sponsored by a primarily labor oriented group.

(*****
VCR FLASH

Here is a true bit of believable trivia for you. The San□
Francisco Chronicle reports that a recent Telescoop survey found that at any given time of the day the clocks on 17 percent of Americans' VCRs are flashing 12:00. Like that's hard to believe.

(*****
DX-HEARD

In DX, we have more information on the upcoming Heard Island operation. Expedition leader Ralph Fodor, K0IR says that the HF gear for the operation now includes six HF transceivers and six or seven Yagis with monobanders for 15, 20, and 40, and verticals for 40, 80, and 160. There will be a separate satellite station manned by PA3DUU.
Ralph says that the amount of time that the operators have to spend dealing with the weather will dictate how elaborate their operation can be, but they will give first priority to being on all the open bands. If circumstances allow, they will attempt to

put beacons on 10 and 160 meters.
Ralph adds that he would like to hear your ideas and
suggestions. You can E-mail them to rfedor@cloudnet.com

(*****
YHOTY DIRECTORS

We at Newsline are proud to announce the addition of two new members to our Young Ham of the Year awards steering committee. Joining Newsline Producer Bill Pasternak, WA6ITF and CQ Magazines' Rich Moseson, NW2L are Bryan K. Glispie, WA6TFD and Captain Larry Zettwoch, KR4IF.
Bryan Glispie, known as Keith to his friends, is employed as the Video Editing Supervisor for KTTV television in Los Angeles and has been licensed since his teens. In the late 1970's WA6TFD placed the first repeater specifically for school age children on the air in the Los Angeles basin. More recently, Keith has been associated with Vocational Industrial Clubs of America, an organization that helps prepare youngsters for careers in adult life.
Half way across the country Capt. Larry Zettwoch, KR4IF has a job that many youngsters dream of. Larry is a pilot who spends many hours each week behind the controls of a Boeing 757 jet transport driving the skies for US Air. In his spare time, Capt. Zettwoch works closely with his daughter in recruiting youngsters into the Amateur Radio service through scouting and other youth programs in Louisville, Kentucky. And if the family name Zettwoch sounds a bit familiar it is because Larry's daughter is 1994 Young Ham of the Year award winner Allison Zettwoch, KD4CKP.
The announcement of the new members of the committee was made at the Huntsville Hamfest banquet during the presentation of the 1995 Young Ham of the Year Award to fifteen year old Adam Weyhaput, N9MEZ. We will have coverage of that part of the story, next week.

(*****

But for this week, that's all from the Amateur Radio Newsline. You can write to us at:

3639. BULLETIN: Progress Toward Solar Cycle Minimum

Newsgroup: rec.radio.amateur.misc
Date: 1995-08-28 00:00:00 UTC
From: Cary Oler <oler@holly.cc.uleth.ca>
Message-ID: <199508281625.KAA25656@holly.cc.uleth.ca>
Source record: 239630
Cross-posted to: rec.radio.amateur.misc,rec.radio.info

The hints suggesting of a new solar cycle are continuing to increase. Recently, two new regions were defined by the Cal Tech group at Big Bear Solar Observatory. Both of these regions had the correct magnetic polarity for the new solar cycle, but the southern-most region (located at S07) was too close to the solar equator to be easily distinguished as a new cycle region. The northern-most region, however, had the correct magnetic polarity and was located at N38, which is the nominal distance from the solar equator for a new-cycle region. This brings the total number of observed possible new-cycle solar regions to three.

These observations are indeed very interesting, particularly considering they are appearing almost one full year earlier than some models predict. This raises a question as to whether the predicted timing of the next solar maximum is correct or possibly off by as much as one year. One of the most common and respected models used world-wide to predict the next-cycle maximum is the McNish-Lincoln method which has been in wide-spread use for years. The present predictions (which ignore the fact that new-cycle spots have already been identified) suggest the next solar maximum should occur between January and April in the year 2000 with a smoothed sunspot number of 108 (a fair bit lower than the smoothed value of 158.5 which was observed as the cycle maximum for the current solar cycle [cycle #22] in July 1989). These same models also predicted the minimum of the current solar cycle to occur sometime between April and June of 1996 with a smoothed sunspot number of 6.

These predictions are only based on observed historic solar cycle sunspot numbers and do not take into consideration actual physical processes which lead to solar cycle minimums and maximums. And they have been known to be frequently in error with regards to timing. For example, the rise of the current solar cycle was only 34 months. No other recorded solar cycle has had such a short rise-time to a solar maximum from a solar minimum. It may therefore only be a minor surprise if the current solar minimum is achieved earlier than anticipated.

The recent observations imply that the predicted solar cycle maximum may actually occur sometime early in late 1998 or early 1999. The implications also suggest we may begin to see more frequent influential major solar events erupting from the Sun later in 1996 or 1997 with a full resumption of regular major solar events capable of possibly strongly affecting our various industries (hydro, GPS, HF radio and navigation, satellite health, upper-atmosphere characteristics, etc) possibly as early as 1998.

Considering the importance and influence of solar activity on many global industries and space-based ventures, the accurate prediction of the nature and timing of the new solar cycle is of great importance. These recent

observations add fuel to the fire that the new solar cycle may already be upon us, if not very near.

3640. Re: Frequ: Mt. Whitney!!

Newsgroup: rec.radio.amateur.misc
Date: 1995-08-28 00:00:00 UTC
From: larryj@teleport.com
Message-ID: <41u6u6$r11@kelly.teleport.com>
Source record: 239631

I climbed Mt. Shasta (14,162 feet) a couple of years ago in mid-October.
One of those weekends you could have gone up in tennis shoes if you were
kinda careful in just a few spots. It was probably 75 degrees with a nice
warm breeze up on top. I took my dual-band hand held with me. Of course, it
worked great from that altitude!
The group of people I ran into enjoying the nice day on top had a few
comments when I pulled the HT out of my daypack:

"Can I call my mother on that thing?"
"Can you call the rescue helicopter down in Redding and tell them
there's a bunch of people up here on top, each with a broken leg
that need to be airlifted back down to the base camp?"
"Can you order us a pizza?"

Must have been the altitude.......

3641. HAM-server Information

Newsgroup: rec.radio.amateur.misc
Date: 1995-08-28 00:00:00 UTC
From: server@GRAFex.sbay.org
Message-ID: <gate.T8RkaD1w165w@GRAFex.sbay.org>
Source record: 239632
Cross-posted to: rec.radio.amateur.misc,rec.radio.info

Distribution: world
Subject: HAM-server information

HAM-server was devised to allow people without direct internet access a way
to get amateur radio related programs and other information. It is not
directly on the internet, so ftp and telnet is not available.

Most of the files on HAM-server are available via ftp from the various sites
around the world that archive them. That's where I got most of them.

In addition to DOS files, there are some Mac ,Linux, and OS/2 files available.
I'm always on the look out for more (particularly Mac, Linux, OS/2).
See below.

General Information:
==========

There is a daily limit of ALL requests of 3-megs. There is an individual
limit of 1.2-megs. If there are a series of files you want to order,
stretch them out over a few days, rather than ordering all at once.
That way, you are almost assured of getting them all, and you won't be
blocking others from getting their orders filled.

ASCII (text) files are split at about 59,000 bytes. UUENCODED binary files
are split at about 750 lines.

A new INDEX is automatically generated every Sunday.

Ordering Information:
==========

Send an email to:

HAM-server@GRAFex.sbay.org

In the text of the message, place:

HELP
GET /hamradio/INDEX.TXT
QUIT

HELP will send you the HAM-server HELP file. This is processed immediately
for return delivery.

o DOS

If you are using a PC and you do not have UUDECODE, order
UUDECODE.BAS or UUDECODE.C and UUEXE536.ZIP. Compile on your

system then uudecode UUEXE536.ZIP. This is a archive of UUENCODE
and UUDECODE, with documentation. This will work for DOS and OS/2.

o OS/2

I highly reccomend UNZ512X2.EXE. This is InfoZip's ZIP and UNZIP
(plus other stuff). Will dearchive PKUNZIPped files, as well as
UNIX zipped files.

o Macintosh

Most Mac programs are stored in binhex (.HQX). You will need a
utility, such as StuffIt to decode. There are also UUDECODErs
and other de-archivers available. See the index for
/hamradio/macstuff/utility.

o Linux

Use UNZIP.

Some Reasons Why Ordered Files Are Not Received:
==

o If you are ordering from a ccmail system, be advised that ccmail
in its default configuration attempts to automatically UUDECODE
files. If your order is sent in parts, it will hiccup after the
first part. See your system administrator.

o Your return path is incorrect. My bounce mailbox fills up quite
regularly with messages. And, since the path is incorrect, I cannot
contact you to let you know. Try the PING command to check that
the path is open.

o You have spelled the file name incorrectly. Check the INDEX.

o You have entered your request incorrectly. Check the HELP file
for correct syntax.

o The file name has changed since the INDEX was generated. Order a
new INDEX. See the HELP file for the NEWFILES command.

o You sent your order to me personally or in reply to this post.
Orders are only honored when sent to HAM-server@grafex.sbay.org.
That's the way the software works.

YOUR HELP IS NEEDED:
====================

If you have a program you would like placed on HAM-server, you can email it
uuencoded (DOS, Linux, and OS/2) or binhexed (Mac) to

incoming@grafex.sbay.org

This email address is set up to flag me that there is something new that I
need to take care of quickly.

Most public libraries have topographic maps. Here in Missouri they also have a whole collection of them at the state library. You'll be able to get far more information from one of them than you will need for a beam heading program...enough even to figure out your grid square to 6 charachters rather than just the usual four (e.g. EM38VL). Another possibility would be to call the BBS run by the guy who writes GEOCLOCK. He has a program on there that will give the lat/long for most large (and even not-so-large) cities. The number is 703-241-7980.

3647. Ramsey Electronics Fox Kit FHT-1

Newsgroup: rec.radio.amateur.misc
Date: 1995-08-28 00:00:00 UTC
From: clemens@academ.wvwc.EDU
Message-ID: <v02130502ac66cb09a90a@[192.101.80.212]>
Source record: 239702

I just finished building a Sly Fox Fox-Hunt Transmitter Kit from Ramsey Electronics (FHT-1). I would recommend this kit to anyone with some kit building experience and the desire to have a "all-in-one" fox. I found the kit easy to build (but I would not recommend it for first-time builders) with very good assembly instructions and adequate operating instructions. Selectable output (5 watts or 800 mw) with optional tones, delays, and programmable CW ID. Optional Voice ID can be added. You need a metal case so either order the Ramsey model or supply your own. I found the unit easy to tune and program.

I have no connection nor do I benefit in any way from Ramsey. I just offer this note for those interested. I would be happy to respond to questions if emailed to my address.

If you've got a good graphic WWW browser, check out:

http://tiger.census.gov/cgi-bin/gazetteer

After finding the appropriate entry for your area, follow the link to the TIGER Map Service browser. For most areas you'll be able to center and zoom the map down to street level accuracy.

I strongly reccommend TIGER to any fellow map freaks. If you want to plot the location of local repeater, or get a good base for local APRS maps, you *definitely* want to have a look at TIGER.

Right now I have a Yaesu FT530 HT and I want to get a base model 25-50 watts that will hit more of the repeaters in my area. The HT doesn't go very far. All I need is 2 meters. Can someone recommend a good base rig for this? I don't want to spend over $200, so I will probably end up buying a 2nd hand radio. I have a copy of the HAm Radio Outlet's catalog, but they only have the newest and greatest radios in there which I cannot afford. If anyone can help, I'd would appreciate it.

I am in the market for a 2m base rig. My HT doesn't get enough distance, so I'm planning to get a base rig with 25 to 50 watts. All the ones I've seen in the Ham Radio Outlet catalog seems like they're the lastest and greatest and costs $600+. Can anyone recommend an older model of a 2m base rig that costs less? I'll probably buy a rig 2nd hand, to keep costs down. I have about $200 for this. Is there a good rig at this price? Please post here or email me.
Thanks for reading.

3654. Re: !!!TWO CELLULAR PHONE

Newsgroup: rec.radio.amateur.misc
Date: 1995-08-28 00:00:00 UTC
From: william@cortex
Message-ID: <41ref6$aov@medulla.ama.ttuhsc.edu>
Source record: 239709

Heh guys, I didn't mean to create a gut rendering controversy here.

All I wanted to point out is , we seem to have a few folks who want to be the 'enforcer' for the cellular companies. I am sure they are we intentioned, but as has already been pointed out ad nausem, there is no Federal statute prohibiting cellular cloning of your own phone.

Cellular companies do not want you to know this, and most of their employees are unaware that it is feasible and legal. Their first response, when asked, is almost always that it not technically possible.

It would be entirely legal for a company to write their contract to prohibit use of a cloned phone. However, most contracts, such as mine, do not address this issue. In the absence of such as clause in your contract, you are free to clone at will and I would encourage you to do so.

Even if such a contract were violated by you, my points are is would be
1) Extremely difficult to detect & enforce.
2) Be tremendously BAD PR for the cellular company.
3) A good reason to change cellular carriers.
4) Not in the best interest of the company to shoo away good, paying customers.
5) A civil complaint rather than a criminal offense. Thus they would need to prove you willfully disregarded their contract, caused damages, and you persisted after being notified of their complaint. Since THEY have the capability to control their system merely by deactivating your number (refer to #4 above though), this would be very difficult to logically prove.

FBI ?!? (ROFL)
Just imagine the scenario at the FBI crime unit when THAT call comes in! Perhaps in between Unabomber events they can put a priority on it.

Perhaps we should look at the Israelis, who have such low cellular rates now that many homes don't bother to get wired up for phone service.

As a final note, may I add, that I am a stockholder in SW Bell and Bell South . All the money they are extracting out of you suits me fine.

Obviously this opinion is PURELY my own, and does not reflect the view of these companies.

Thanks for describing my problem exactly. I assumed it was tone
deafness. I have never heard the term "temporal duration," which
describes me to a "T" (tee?)(tea?).

Thanks Again

>
>Ed Mitchell

You should also keep in mind that for the same reason, you may be heard
on two different carriers on the same paging channel (the 21 special digital-
only channels) BTW, these are the channels a phone may transmit on even
when your phone is "hung up"--so don't even have a phone ON in a plane.

If a phone number is decected active in two cities, the software may
assume that a second 'clone' of the phone is being used. If this happens,
the most logical action for a carrier to take is to temporarily shut down
your phone number, and force you to either change the number or the
phone (ESN) to make the clone unusable. If it happens more than once,
a carrier may safely assume the following:

1) You used your phone in a plane, a clear FCC violation
2) You have been targeted by shady characters as a prime target
to repeatedly tack their cellular bills onto.
3) You are in possession of a second 'clone' of the phone,
invalidating anti-cloning security measures to protect other

customers.

Wouldn't ANY of the above would be enough reason for a carrier to cancel your account?

Although I haven't heard of this taking place yet, don't be surprised if what's "ok" now isn't later, as more is done to combat fraudulent use of cellular service.

BTW, two things I never leave home without--my HT and my OKI 1325.
(Neither which I have on in a plane :-)

3659. Real ham definations

Newsgroup: rec.radio.amateur.misc
Date: 1995-08-28 00:00:00 UTC
From: k1oik@ccsnet.com
Message-ID: <7964115786801@ccsnet.com>
Source record: 239714

The following was received via RelayNet (available by calling Bob Baker's BBS at 385-3427) from Scott Cole, I had nothing to do with writing it, but it is clear that there are some hams who really understand the rest- Burt Fisher, K1OIK.

DICTIONARY FOR THE NEW AMATEUR RADIO OPERATOR.!

With the arrival of the new licensing regulations, we eagerly anticipate an influx of new amateurs. Those who tune in for the first time may be surprised to discover that the current inhabitants of the airwaves appear to be communicating in a language which bears only a passing resemblance to English. For the benefit of the newly licensed, the following is intended as a primer in this mysterious form of communication.

WE

It is not generally realized that, as the result of an obscure clause in the licensing regulations, the holder of an amateur radio licence becomes plural immediately upon receiving the licence. This is a privilege that was formerly reserved for royalty ("We are not amused"), but with the advent of radio has been extended to all licensed amateurs. Thus, before you became licensed you would say "I am driving down the road". Once licensed this becomes "We are driving down the road".

Roses are red
Violets are blue
I'm schizophrenic
And so am I (we)

HI (or HI)

A hangover from the days of CW communication, this was intended to convey a laugh in code. In audio communications the use of this expression means either:

a) The joke I (we) just told was so unfunny that I (we) find it necessary to draw your attention to my (our) pathetic attempts at humour.

b) I (we) suspect that the modulation on my (our) radio is so poor that it is unable to reliably reproduce the sound of a laugh.

SHACK

Be it ever so humble, all non-mobile radio equipment is housed in a "shack". Even though many of our wealthier brethren have megabucks of real estate devoted to the hobby, it is still referred to by this unfortunate epithet. Perhaps a hangover from the arrival of indoor plumbing, when the budding ham was left with a redundant outdoor structure in which to house his equipment?

SILENT KEY

Passed over, passed away, ceased to be, gone to Glory, gone to that great ham shack in the sky, moved to Moncton! Obviously amateurs are as coy as the rest of the population when it comes to uttering the "D" word. Actually, since the introduction of voice transmission, the vast majority of the amateur population are silent when it comes to keys.

BAREFOOT

Originally a method of ensuring that the operator would provide a reliable path to ground in the event that he came into contact with a lethal source of power (see Silent Key above), this now refers to running a transmitter without the addition of an external power amplifier.

TWISTED PAIR

Thought by many to refer to two strange individuals given to certain unusual (and,in some communities, illegal) practices, this is actually a complex way of saying "telephone". Fortunately not in common use outside the ham community, or the Bell Twisted Pair Company would probably not have attained the position that it now enjoys.

XYL

The feminists favourite! It means "Wife" or, more likely, "The Wife" (eX Young Lady - XYL! Get it?). It's not entirely clear whether this intended to imply that the person in question is either no longer young, has ceased to be a lady, or both. Presumably with the current high incidence of divorce (yet another possible bi-product of your new found obsession with Amateur Radio), there are also a number of XXYLs out there. Habitually referring to your Spouse in her presence as "The XYL" has been known to hasten this process.

HARMONICS

The unwanted bi-product of an oscillation. For some reason this has now come to mean "children". Obviously the term was coined by someone who didn't have any because houses containing them are rarely harmonious.

73

Chosen for its rhythm in morse, this means "Best wishes". It takes the same number of syllables to speak it as "best wishes" so no real time penalty. This one is now metamorphosising into "Best 73s" which translates to "Best best wishes's"

88

"Love and Kisses". Chosen for who knows what reason. Usually employed by YLs and XYLs (see above), this should be utilized with care by all who do not fit either of these categories!

807

A type of vacuum tube popular as a power output device a few years ago. This term is now used as a reference to beer - presumably because the glass bottle of the 807 bears absolutely no resemblance to a container for the Golden Throat Charmer!

"Q" CODES

These are three letter codes, all starting with the letter "Q" which are ciphers for complex phrases. My personal favourite is - "Shall I point my searchlight nearly vertical on a cloud, occulting if possible, and when your aircraft is seen deflect the beam upwind and on the water or land to facilitate your landing?" Needless to say, this one is not in common usage among amateurs!

With the introduction of audio transmission, the codes became redundant, but there are still those out there who speak the codes as a means of separating the cognoscenti from the uninitiated.

QSL

Originally "I acknowledge receipt", now:

1. A way to say "Yes" using three syllables instead of one.

2. An alternate to "Roger", the single most popular name among amateurs (Roger, Roger).

3. The amateur equivalent of a "Big Ten-four".

4. A reference to those little pieces of card with call letters on them which are totally unknown to certain Scottish members of our group.

QSO

This is supposed to mean "Can you communicate with .... direct or by relay?" but has now been converted into a word (pronounced KEWSO) to substitute for "chat". Thus, once licensed, you no longer chat to a friend, you have a Kewso with him (or her). Worse yet, if this conversation were to take place without the aid of radio, it would become an "Eyeball Kewso"! There is very little evidence of serious or lasting optical damage as a result

of this strange practice, although it has been publicly condemned by the College of Ophthalmic Opticians. However, until he gains experience, the new ham is advised to wear protective eyewear for his first few "Eyeball Kewso's".

QSY

Officially "Please change frequency to ---kHz." On 2 metres now used to indicate that you are moving (QSYing) to another repeater.

Harder to say but much more satisfying.

QRT

Officially either "I am ceasing transmission" or "Please cease transmission". In audio it becomes "going QRT". See also "Going clear" (not to be confused with transparent).

QRU

It means "I have nothing for you". If you have nothing to say, why say it? (Because the two metre band would be totally silent if we all did that, that's why!)

QTH

Yet another advantage of your licence. You no longer have a house, apartment or address - you now have a QTH! Actually, it's supposed to mean "What is your position (or My position is) in latitude and longitude (or according to any other indication)."

Other people merely live in your town - you have a QTH there.

3660. Why "hi hi" is really used.

Newsgroup: rec.radio.amateur.misc
Date: 1995-08-28 00:00:00 UTC
From: k1oik@ccsnet.com
Message-ID: <7964115791202@ccsnet.com>
Source record: 239715

Here is a response I got when I asked why HI HI is used:
<HI HI>

BF> Can someone tell me why hams say the above in VOICE conversation?

Yes,

1. It is an abbreviation of two hiccups for those who are hiccup
impaired (or should I say challenged?).

2. A verbal expression accompanied by a royal wave of the hand when
when addressing one's subjects. (Ilusions of grandeur)

3. They haven't laughed in so long they have forgotten how to
verbalize "Ha Ha".

4. They are learning disabled and confuse "Hi Hi" with "Ha Ha"

5. Prestige. It makes one sound like an "old timer" whose
Daddy gave him a straight key to cut his teeth on.

6. "HI HI" - I'm trying to laugh, but I don't know how.

Tom, N4GYS

3661. EC Decision C-80/92 - against Belgium concerning scanners

Newsgroup: rec.radio.amateur.misc
Date: 1995-08-28 00:00:00 UTC
From: pve@dg13.cec.BE
Message-ID: <30419997@smtp>
Source record: 239716

In 1994, the European Commission supported by the United Kingdom won a court case against the Kingdom of Belgium concerning the latter's ban on scanners and other receiving equipment(case C-80/92). The Kingdom of Belgium, a member of the European Union, may no longer ban such equipment.

Since according to Juris Prudence, such a decision may apply to your individual member state, we would like to advise any of your members or radio amateurs in your area, that if they have suffered as a result of such member state policies (for example if the authorities had confiscated their scanners, or imposed fines on them) that the European Commission will look at the individual cases and take appropriate action.

Please send your comments and information on your specific case (including all supporting documentation in any of the 11 languages) to Alain Jaume, DG-XIII, BU-9, European Commission, 200 rue de la Loi, 1049 Brussels, Belgium.

Thank you,

Peter Vekinis,
DG-III, BU-31,
European Commission

3662. Re: Rabbit TV transmitters

Newsgroup: rec.radio.amateur.misc

>> If so which transistor and do any other components need to be added? I
>> would like to drive an external linear but need an extra 10 db or so to
>> drive the linear to full power.
>
>Skip,
(Hope I didn't chop the thread too badly, but you get the gist...)

I took the freq. counter to my Rabbit Transmitter,
A - 910.420 MHz
B - 916.300 MHz
C - 922.380 MHz

The bandplan described in 'Amateur HamBook' (Bill Smith, N6MQS)
breaks out the relevant sections of the 35cm Band Plan (902-928 MHz)
as;
910 - 916 ATV
916 - 918 Digital Communications
922 - 928 Wide-bandwidth experimental, simplex ATV, Spread Spectrum

Has anyone used a Rabbit transmitter or reciever as components in high bandwidth
packet? Pretty cheap set (~$50/pair), if Skip gets a hack for an external amp,
this sounds like a very cute homebrew base. :-)

Please mail me or post any info in this vien (ATV, packet, mystery meat) regarding
the Rabbit. I'll put together the info into a web site/FAQ (unless such a thing
exists already and some kind soul would like to post a link ...;-).

3665. Cellular cloning-FCC rule

Newsgroup: rec.radio.amateur.misc
Date: 1995-08-28 00:00:00 UTC
From: Wayne_Estes@csg.mot.com
Message-ID: <9508281028.ZM24208@SALCIUS2>
Source record: 239720

FCC rule, Section 22.919(c) states that the ESN of a cellular telephone must be "factory set and must not be alterable, removable, or otherwise able to be manipulated". This rule applies to all cellular telephone models submitted for FCC type-acceptance (in the United States) after January 1, 1995.

Worldwide, the use of cloned phones (using the ESN of someone else's account) causes huge unrecoverable losses to cellular system operators and long-distance companies. This problem is being addressed in several ways:

1. Making it more difficult to clone the ESN of cellular phones.
2. Authentication (ESN scrambling) schemes that make it impossible to read the ESN over-the-air.
3. Criminal prosecution of people who clone ESN's.

Cloning two cellular phones to use on YOUR OWN cellular account is not a problem for system operators--you still pay for the airtime and long-distance. The problem is that the same technique can be employed to use a phone on SOMEONE ELSE's account. If this happens to you, you would undoubtedly refuse to pay the unexpected bill for thousands of dollars of airtime and long distance. Multiply this by millions of cloned phones, and you can see why cellular system operators and long-distance companies want cellular phones to be impossible to clone.

Now that many people have both mobile and portable cellphones, system operators could possibly allow customers to use two phones (with different ESN's) on one account. This would require a modification of their account verification procedures, and would definitely cause problems when both phones are on at the same time. When receiving calls, only one phone should respond to the pages from the cellular system.

Hello Assaf here,

I MUST sell these radios as SOON asn POSSIBLE.

1) HTX-202 great shape, comes with box, manual, alkaline battery pack, NiCd rechargeable battery pack (with charger). It also comes with the included Rubber ducky antenna AND a Radio Shack telescoping antenna. I am slo including the 5-year warranty good till year 2000.
Asking $180

2) Icom IC-R71A Communication Receiver, An EXCELLENT shape Receiver modifies to receive 0.000.0KHZ - 30.000.0MHZ ALL MODE!! USB, LSB, RTTY, CW, AM. Internal power supply, RF preamp, 32 memories.
asking $1000

3) Uniden SC-150Y handheld Scanner. EXCELLENT shape.
RECEIVES 10METER HAM, LOW BAND, 6 METER HAM, AIRCRAFT, MILITARY, 2 METER HAM, HIGH BAND, FEDERAL GOV., 70cm HAM, UHF BAND, "T" BAND, "800" BAND. ASKING $100

If you are in the Greater New York area please reply to this address or Packet KB2UZX @ N2MFS.#NLI.NY.USA.NOAM
In the reply please enter your Name and #.
Thank-you

Thanks to some helpful readers of the above, I've learned that ARRL once marketed an audio cassette called quote Hola CQ unquote that is just what I'm looking for. ARRL advises that they're now out of stock and discontinued. If any reader of this newsgroup might have a used copy they would be willing to sell (or even loan for a couple of weeks), I would be glad to pay full original cost and postage.

Thanks, Jim, KG5KP

3670. FLUKE DMM Operational Safety Notice (RISKS-17.24,25)

Newsgroup: rec.radio.amateur.misc
Date: 1995-08-28 00:00:00 UTC
From: teninty@tc.fluke.COM
Message-ID: <199508281630.JAA17809@nothing.ucsd.edu>
Source record: 239725

Here is the official FLUKE notice, dated 18 August, 1995

Subject: FLUKE SERIES II, MODEL 21, 23, KIT-23, 70, 73, 75 AND 77
OPERATIONAL SAFETY NOTICE

Dear FLUKE DMM Customer:

We have become aware of a product malfunction in certain Fluke digital multimeters (DMM). This problem is the result of a manufacturing change implemented in July, 1994. Only seven models are affected: the Fluke Series II Model 21, 23, KIT 23, 70, 73,75, and 77 meters imprinted on the case bottom with serial numbers between 60990000 and 63752000. No other Fluke instruments are affected. If the S/N of your DMM is preceded by a "9" or followed by an "R", this notice does not apply.

The malfunction may occur when a voltage input greater than 400 Vdc is applied in either voltage functions, AC or DC. The meter may go into a lock-up state and will indicate a reading of (or near) zero volts. WHEN THE MALFUNCTION OCCURS, THE METER MAY NOT INDICATE THAT HIGH VOLTAGE IS PRESENT, PLACING THE USER IN A POTENTIALLY HAZARDOUS SITUATION. The failure mode commonly occurs when the positive lead (red) is connected first to a high voltage supply and then the common (black) lead is connected.

To correct this problem Fluke will modify your meter without charge. Even if you normally do not use your meter in the voltage range mentioned, it is recommended that you return your meter for modification.

If you are not the primary user of the affected Fluke DMM, please make every effort to pass this notice to the appropriate people within your organization.

Please send your meter to your Fluke Service Center to have this modification completed. Your unit will be modified and on its way to you within a few days.

NO TELEPHONE CALL OR RETURN MATERIAL AUTHORIZATION (RMA) IS NECESSARY.

In the US the place to send your meter is:

Fluke Technical Service
1150 W. Euclid Avenue, MS 70S

These devices generally use a technique called passive RF backscatter.
Allmost anything will reflect or re-radiate RF energy, especially in the UHF
and higher regions. These devices can operate on very low power because they
do not actually transmit back to the interrogator, they simply modulate the
signal reflected off of it's own antenna. One company that builds such
devices is Amtech located in Dallas Texas. They build both RF powered and
battery powered devices. The problem with the RF powered device is that the
range is severely limited. This is really a problem if you want a device that
operates license free under Part 15 of the FCC rules. I recently designed a
system that uses a very small lithium cell for power. The CMOS ASIC draws so
little power during standby (0.4uA), that the battery will last over 5
years. This system operates on 915MHz and is compliant with FCC part 15.245.
It is currently in production and is being sold by a company in Louisiana.
Contact me if you need more info.

>signal without overload.
>
The post IF filter also improves the ultimate stopband rejection
of the receiver. With typical mechanical constraints that get worse
in a portable unit like the one I built, it is difficult to get
120 dB or more attenuation 10 kHz away from the desired signal with
a single filter. I need lots of stopband attenuation--W1TKZ or WB1GQR
is often within a few hundred yards (30 ft one year) and I can see the
W2SZ/1 hilltop.

Besides, the few dB of noise improvement helps receiver sensitivity--222
MHz isn't as noise limited as 2 meters in many areas--its more like 432.

If you have a physical impairment, the Rules allow for a physician to submit a statement to the examiner team that might exempt you from the receiving requirement. I don't think you would be exempt from the sending test, though. I have heard of CW ops that use their fingers against the cone of a speaker to "feel" the Code.
I myself cannot hold or identify a tone either. If you asked me to set the dial on a signal at 600 hz, it would be somewhere between 400 and 800. So I have rigged up a spot function on my ICOM radio so I can zero-beat the other station within a few cycles or so. You can find me in the contests every so often at 30wpm.

I hear you, but I think you are saying "you don"t want it", and "it's useless to you". However, that won't get you the upgrade you want. I spent 5 years getting to the 20 wpm level for my Extra. Keep trying.

Mygawd, this argument is STILL going on?

ANY amateur can use ANY radio (no matter how aggressively modified) in the amateur service so long as it meets the spectral purity and power output regulations as they apply to amateur operation.

Such modified radios are unlikely to be "legal" in any other service.

So break out the schematics and have a ball -- share your technical discoveries with the rest of us and along the way some of us might get a bit smarter.

If you have a problem with the above, join the QCAO (Quarter Century Appliance Operators).

3681. US Islands Award Program, August 25 Newsletter

Newsgroup: rec.radio.amateur.misc
Date: 1995-08-29 00:00:00 UTC
From: johnn0isl@aol.com
Message-ID: <420f2t$b56@newsbf02.news.aol.com>
Source record: 239536

From: NL7TB@WA7EAQ.#EWA.WA.USA.NOAM
To : ISLDX@ALLUSA

official packet bulletin for the
****
I UNITED STATES ISLANDS AWARDS PROGRAM (US I) *
S c/o John Reisenauer, NL7TB *
L Rt. 2 Box 2161, Benton City, WA 99320 *
* *
* US Islands ARC "KC7KHU" D
* US I Last Frontier ARC "WL7CND" X
****
August 25, 1995

We have several new islands that have been pre-qualified.
Thanks to Fernand, VE2FVD, for the list. Here they are:
Key West (FL-40S) Santa Catalina (CA-16S) Baker's (MA-09S)
James (SC-05S) Edisto (SC-06S) and Dauphin (AL-02S).

Page, WA3EOP, has another island activated- East Chincoteague
(VA-02S)! Thanks for your efforts OM and for informing us about
two Chincoteague Islands. West Chincoteague has been assigned
VA-03S. This must be Virginia week, also please add Assateague
Island, VA-04S, recently activated by John, K8SCH/4. John also
mentioned some fresh water islands near his QTH. Go-for-it OM!
If you come across a saltwater island IOTA qualified but not in

the US I Island List, just let me know. Some islands not meet-
ing IOTA rules could count for US I as long as they meet the
distance rule.

I was pleased to hear from one of our SC's, John, N0ISL who
activated another "new one" from Minnesota. Minnesota Point Isl-
and, on Lake Superior near Duluth, is registered as MN-03L.
John along with AA0TR, N0WEM and N0RPP worked 5 countries from
there!

I received some photos and QSLs from Garry, VE3XN, founder of
the Canadian Islands Awards program (CISA). Very impressive look-
ing CISA plaques were received by VE3NSZ (Ernie), KA2PHQ (Dick)
and WD8MGQ (John)- all well known "island chasers"! Ernie and
Dick were smiling proudly with their ISLAND ACTIVATOR AWARD OF
EXCELLENCE and John with his 300+ ISLAND AWARD. Hey guys, how
about putting on some state islands? The US I certificates are
very patriotic looking with an island theme (hint hint).

Don't miss the W/VE Island Contest September 23 and 24. All
you have to do to receive a certificate is to submit a contest
entry form along with $5.00 (US funds) and a certificate-sized
SASE. See you in the pileups!
73, good island DXing

> How do i find out my exact longitude & latitude , so i can use a beam
> heading program ?
> Thanks !

Look up in the Usenet maps the lat/long of the closest site to
your home (possibly a college), and use theirs. It could be
sufficiently accurate for long distances.

Or even easier, go to a library (of the said college?) and look it
up in a map. If you live in California that information should be
good enough until the Big One.

Or go to a computer shop and feign interest in one of those
geographical programs. Look up your block and write down the lat/long,
usually displayed somewhere in the screen, as if you where making
notes on the features.

You still have the problem of calculating the bearing of the
great circle to your destination. Ask in rec.boats about that.

You might try this address:

http://www.pixi.com/amateur-radio/

although it was lacking in info concerning Maui and Kauai. From my
two years on the Big Island I can tell you that the inter-island
2m frequencies for Maui are 147.02+ and Kauai 147.04+.

But also give this site a try:

http://www.earthlink.net/~artsci/repeaters/hawaii.html

but you'd better have a map out! ;-)

Yes, I used the generic term `generator' since *no one* refers to them
as `bike alternators'. The two electricity-generating devices on my
bike are AC (one for the headlight, one for the tail light).

TU>and normal lines of ham communications are ineffective, Part 97,
TU>Subpart E specifically allows the ham to use "
TU>any means of radiocommunications at its disposal".....

true. many hams like to argue this because they have been around a
while and think they're doing people some good by putting in their
negative comments.

TU>Therefore it is NOT always illegal to USE non ham frequencies. The
TU>"illegality" of modifications has been beaten to death in other threads,
TU>and there is no law against modification of my radio to do anything
TU>anyway.

all my rigs are modified. ALL 7 OF THEM.

TU>This is not to be taken lightly, there are anecdotes about hams losing
TU>their radios for using other frequencies, but in an emergency I
TU>certainly intend to use "any means of radiocommunications" at my
TU>disposal with my HT and GET HELP. I'll deal with proving the emergency
TU>later, the first thing is always the health and safety of whoever I
TU>am with, or me!

even the emergency agencies in my area have mixed responses about this.
most emergency workers that i talk with, when it comes down to it, say
that in a true emergency they wouldn't look to prosecute the person
making the call or confiscate their equipment. it's just not fair.

TU>The ham.cop attitude exhibited by the "you can't modify your radio"
TU>crowd may prevent a naive ham, one who has not read and understood
TU>the rules, from getting necessary help in a true emergency. It is
TU>true that you might also prevent some bozos from giving ham radio
TU>a bad name when they jam other services, but at the expense of
TU>possible lives in the event of a real, true, live emergency?

TU>Clark
TU>WA3JPG

i have to agree about the jamming. it was very bad and quite rampant
around here the past few years, but seems to have quieted down
considerably as of lately. the only people i know of at the moment that
are still jammed is the local REACT group, but if people knew the
stories and conspiracies surrounding the local group and the types of
people that are sometimes associated with them, they'd understand why.
btw, my views on REACT do not apply to the entire organization as a
whole, just the local yocals around here.

my rigs are modified as an added measure of security. the bands that i do operate on outside of the amateur bands i have commercial rigs which cover the frequencies (my vertex FTL7011-99 for UHF amateur and commercial and my motorola MT1000). besides, having my 2-meter and 440 gear modified cuts down on the amount of crap i carry around for monitoring purposes, such as police, fire and the like.

i actively hunt jammers in the local area whenever they raise their ugly heads, and i'd never want to be caught hunting them with a scanner since a typical scanner has no signal strength meters or the flexibility a modified ham rig does. it makes tracking possible.

3692. GE PCSH3 -? How to Program?

Newsgroup: rec.radio.amateur.misc
Date: 1995-08-29 00:00:00 UTC
From: camter28@astro.ocis.temple.edu
Message-ID: <41tlfb$qm3@cronkite.ocis.temple.edu>
Source record: 239635

I have one general electric model PCSH3 portable radio, which
has an lcd display. It is currently programmed with 2 channels,
and it is n the vhf band. I see little plugs/pads on the side of
the radio where it looks like a programming adaptor may fit to
program the radio. I took it apart and there are no frequency
crystals, (if's yes, but xtals no)

Would anyone be able to point me in the direction of finding
out where to get it programmed?

(BTW, the only local ge dealer said to bring it in and they could
program it for 100$, Well, I think that is a little too high, since
I was given the radio..

Thanks..
camter28@astro.ocis.temple.edu

ANARTS News Bulletin 873 27TH AUGUST 1995

SSTV Information
----------------

Condensed from an article by Radioware PO Box 1478 Westford
MA 01886. Week 2 De VK2FJL @ VK2EHQ

Transmission Modes
------------------
The original 8 second SSTV transmission mode (around 1958)
had the following characteristics:

black = 1500 Hz
white = 2300 Hz
grey levels in between
120 scan lines
15 lines per second
5 mS of 1200 Hz for horizontal sync
30 mS of 1200 Hz for vertical sync

Since that time many more modes have been invented,
sometimes to add new capabilities, sometimes the result of
Not Invented Here syndrome.

The major groups are:
Robot - Introduced with the Robot scan converters (California).
Wraase - Introduced with the Wraase scan converters (Germany).
Martin - Developed by Martin Emmerson (England).
First available as replacement PROMs for Robot 1200C
Scottie - Developed by Eddie Murphy (Scotland).
First available as replacement PROMs for Robot 1200C.
AVT - Developed by Ben Blish/Williams (Montana).
First available in the AVT system.

The Robot, Wraase, Martin, and Scottie modes are all
closely related. They all use the tones above for black,
white, and grey levels. They all have 1200 Hz horizontal
sync, although some Martin and Scottie implementations
rely on accurate crystal oscillators and ignore the
horizontal sync once synchronized. Colour is generally
transmitted by sending each scan line 3 times, once each for
red, green, and blue components.
```

Robot is different from the rest in that it encodes colours with luminance (Y) and chrominance (R-Y and B-Y) instead of R,G,B.

Each of these modes has a few different speeds, usually providing 120 or 240 scan lines and varying degrees of horizontal resolution (Actually some send 128 or 256 lines but the top 8 or 16 are always a fixed grey scale, leaving 120 or 240 usable lines.) In general, the trade-off is time vs.image quality: the modes with the best image quality require the most time.

The Robot modes have a much longer vertical sync (called VIS) containing 7 bits of information and a parity bit. This identifies the format of the following image so manual selection is not required on systems that recognize it.

Everyone else has adopted the Robot VIS coding and assigned themselves unused codes in the original specification. Unfortunately, Scottie DX and one of the AVT modes use the same VIS code due to alack of cooperation among developers.

The AVT mode is radically different from the rest. It has no horizontal sync at all; very accurate crystal oscillators are required to prevent slanted pictures. After 3 repetitions of the usual Robot VIS code, it has a digital header with 32 repetitions of the transmission mode, and a sequence number. It is only necessary to receive one of the 32 groups correctly to achieve synchronization.

More next week

This information was kindly supplied by Frank VK2FJL, and will run over 5 - 6 weeks. If you have any queries, contact Frank on packet at VK2EHQ. Our thanks to Frank for contributing to the broadcast.

AMATEUR RADIO OPERATORS CAN YOU ASSIST?

COMMISSION OF INQUIRY INTO RELATIONS BETWEEN THE CAA AND SEAVIEW AIR

As reported in the media last year, on Sunday 2 October 1994, an aircraft was lost between Williamtown and Lord How Island. The lives of the pilot and all 8 passengers were lost. The aircraft was a 10 seat Aerocommander 690B with a call sign of VH-SVQ.

Between midday and 2pm of that day, there were various communications among VH-SVQ and three other airborne aircraft (VH-IBF, VH-SVV and VH-SVN). The communications occurred on VHF frequency 120.6 mhz [sic].

Information about the communications may be of assistance to the Commission of Inquiry into the Relations between CAA and Seaview Air.

If you, or any person you know, heard radio exchanges on 2 October 1994 which you believe may have been to, from or about the aircraft VH-SVQ, would you please, as soon as possible, telephone Ms Christine Briton, Secretary of the Commission on (02) 336 7100 or send a fax on (02) 360 7551.

Written correspondence should be addressed to:
The Secretary
Commissions of Inquiry into the Relations Between the CAA and Seaview Air

IPS WEEKLY SOLAR AND GEOPHYSICAL REPORT

(18 AUGUST - 24 AUGUST)
SUMMARY
Date 18 19 20 21 22 23 24
10cm 72 72 71 71 70 74 77
A 8 10 6 3 9 11 (5 estimated)
T 17 14 16 14 18 35 12

SOLAR ACTIVITY WAS VERY LOW 18TH TO 23RD, AND LOW ON 24TH AUGUST.

THE GEOMAGNETIC FIELD AT LEARMONTH W.A. WAS QUIET 18TH TO 19TH, AND QUIET TO UNSETTLED THEREAFTER EXCEPT FOR A BRIEF ACTIVE PERIOD EARLY ON 23RD AUGUST.

IONOSPHERIC F2 CRITICAL FREQUENCIES WERE MOSTLY NEAR PREDICTED MONTHLY VALUES. THERE WERE BRIEF ENHANCED PERIODS TO 40 PER CENT ON 22ND AND 23RD. SOME SPREAD F WAS OBSERVED ON 21ST, AND BRIEF SPORADIC E ON 22ND.

FORECAST

(25 AUGUST - 31 AUGUST)

SOLAR: LOW

GEOMAGNETIC: QUIET

IONOSPHERIC: NEAR PREDICTED MONTHLY VALUES WITH GOOD HF CONDITIONS.

COURTESY OF IPS RADIO AND SPACE SERVICES

VK2SG RTTY DX NOTES FOR WEEKENDING 18 AUG 95 (BID RTDX0818)

It was brought to our attention from Syd, VK2SG an interesting note that this is the 850th set of notes for the VK2SG RTTY DX Bulletin that started in 1978. We all Thank you for this fine weekly edition. God speed, Syd and Thanks for inviting us to assist you.

Our information this week came from: DJ3IW and the Cent-Europe DXCluster Node DB0SPC, I5FLN and the IK5PWJ Packet Cluster, JF1MGI, N2VYU, W2JGR and the NJ0M node the Twin-Cities DX Packet Cluster and W5KSI. Thank you all for your assistance.

ARLD044 DX news

This week's bulletin was made possible with information provided by Tedd, KB8NW, Rolf, SM5MX, Hans, K0HB, Bruce, WA3RHW, Bob, N8CW, K6URI, W3HG, Joe, NJ1Q, the OPDX Bulletin and Contest Corral from QST. Thanks to all.

LAOS, XW. Andreas, DK9LM and ex-TA1ZE, is in Laos for 20 months and will try to obtain a license to operate.

MADAGASCAR, 5R. Shun, JF1MGI/VK9MG, will be in Madagascar until the end of September to conduct medical studies, specifically the ecosystems of rare animals. Radio activity will be concentrated during the third week of September using the call sign 5R8EU, with an emphasis on RTTY, PacTOR and low bands. QSL to his home CBA.

UNITED ARAB EMIRATES, A6. Listen for newly licensed amateurs A61AI and A61AM.

LIBYA, 5A. It has been reported that there are three operators at the 5A1A club station. Check 7005 kHz at 2000z for CW and 14207 or 14243 for SSB.

DXPEDITION NEWS. Ali, ZP5ALI, will be on the air from Syria as YK1/ZP5ALI August 22 to 27, from Egypt as SU1/ZP5ALI August 28 to September 3 and Lebanon as OD5FR September 4 to 14. He will run SSB on 20, 15 and 10 meters. QSL to Fagues Rahal, Avda Pacheco 5257, Asuncion, Paraguay.

ARUBA, P4. Jack, N2VW, will be signing P40T from Aruba September 5 to 12. He will be in on the WAEDC SSB Contest action. QSL this operation of P40T via N2VW with SASE/SAE with postage.

TURKS AND CAICOS ISLANDS, VP5. PA3ERC, PA3EWP, PA3BBP and PA3FQA will be signing /VP5 from Providenciales Island September 7 to 26, all bands/modes. They will sign VP5C for the WAE SSB and CQ WW RTTY contests. QSL via PA3ERC.

SAINT MAARTEN. Mike, K6URI, will be operating as PJ7/K6URI September 9 to 23 on 40, 20 and 15 meters. Extra effort will be made to work novices on 40 meters. QSL via K6URI w/SASE or postage. All novices will receive cards, regardless of SASE/postage status.

BERMUDA, VP9. Don, W4ZYT, plans on being active from Southampton Parish as W4ZYT/VP9 September 16 to 22. Activity will be mostly CW on 40 through 15 meters.

WAKE ISLAND, KH9. Tom, AL7EL, will be active as KH9/AL7EL in late October.

COMING EVENTS

SEPTEMBER 3RD DARC CRORONA 10M DIGI
23rd-24th CQ WW RTTY CONTEST

OCTOBER 21ST-22ND JARTS WW RTTY CONTEST

Society information
The Society may be contacted at : PO Box 860, Crows Nest 2065 Australia, for such matters as membership and general enquiries. Enquiries can also be made by packet to the President(Col) VK2CTD at VK2XSB, or the Secretary (Pat) VK2JPA at VK2AAB.

News items may be sent to Broadcast Officer PO Box 60 Blacktown 2148 Australia, or by packet to VK2JPA at VK2AAB. Email address for the Broadcast Officer is :

patl(at)pitt.conmusic.su.oz.au

The Society welcomes news items on any digital subjects from anywhere in the broadcast coverage area. We are looking forward to news from your areas to let other amateurs know what you are doing in the hobby. Hope to hear from you.

73s de Pat VK2JPA Broadcast Officer

> >requirement. I don't think you would be exempt from the sending test, though.
>
> Sending test? Gee, Tyler, it's been a long time since you took the test. :-)

Section 97.509(d) states that passing a telegraphy receiving examination
is adequate proof of an examinee's ability to send and receive telegraphy.
The adminstering VEs, however, may include a sending segment in a
telegraphy examination -- but it's not required. Based on the FCC
recommendation, ARRL/VEC VE teams administer only receiving tests and
don't require sending tests.

A sending test may be used as an accomodation for a handicapped person.
The examination may be administered by allowing the examinee to send using
a key, keyer or other similar device - a computer keyboard is not
acceptable, however. Sending tests may be requested [by the VE team] from
the VEC for this purpose or the VE team may create their own -- or use one
of [the ARRL-VEC's] standard texts from [the ARRL-VEC's] Morse code tapes.

In an accomodated sending test for a handicapped person, the VEs must
decide whether the candidate has maintained the required 5, 13 or 20-wpm
character speed. Spacing between characters, because this is an
accommodated exam, isn't judged. Depending on the severity of a
particular handicap, although some candidates can maintain a high sending
speed, others may only be able to demonstrate single characters -- and
even those characters may be extremely difficult for the candidate to
accomplish. The minimum sending test may be limited to include only the
FCC's required 43 characters sent randomly, as administered by the
examiners. For extreme cases, a passing grade can be based on a 70%
accurate demonstration of ability.

The examiners' decision should be based on the candidate's ability to
comprehend the Morse code message by overcoming the handicap through an
accommodated means.

Message-ID: <41u4ah$gln@newsbf02.news.aol.com>
Source record: 239641

Power is Power...

You want to install the filter between the power supply (cigerette lighter) and the radio. You would have to (in-line) install the filter at the back of the lighter. The other option - remove the lighter element and with a hammer drive the filter into the socket:) I'm not sure of your application, but I'm sure you would prefer a hidden installment. Your best aproach is to hard wire your installment direct to the battery. Installing to the lighter would pick up noise from the alternator.

Good Luck
KC7MTJ
